

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.

+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.

+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.

+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at `http://books.google.com/`

REPORT

OF

THE SECRETARY OF WAR.

WAR DEPARTMENT,
November 24, 1873.

Mr. PRESIDENT: I deem it proper in the commencement of this report to make a statement of the estimates of appropriations for the Department for the next fiscal year, comparing them with the appropriations for the current year, and giving the reasons for the change.

The estimates for military purposes for the year ending June 30, 1874, were $33,826,378.78. The estimates for the same purpose for the year ending June 30, 1875, are $34,410,722.89; the excess of the next year over the current one being $584,344.11. The appropriation for military purposes for the year ending June 30, 1874, were $32,917,971.37.

It has been the custom of Congress from time to time to reduce the estimates of the Department. I have endeavored, aided by the officers of the Department and of the Army, to keep the expenditures within the limit prescribed by Congress, but experience has shown that the amounts previously asked for, based on data carefully prepared by the chiefs of bureaus, after ample consideration, were necessary for the management of the Department.

In addition to the usual estimates already named, the following are submitted for such action as Congress may deem proper to take:

Armament of forts	$1,449,550
Estimates for engineer purposes	20,459,396

It will be observed that among the estimates for the War Department for the next as well as the preceding years, many appropriations are asked for which should not be classed under those for the support of the Army proper: For instance, those for the observation and report of storms; the Freedmen's Hospital; the settlement of claims for horses lost in the military service; the collection and payment of bounty to colored soldiers; military telegraph lines in different parts of the country; refunding to States expenses incurred in raising volunteers; signal stations at light-houses; arming and equipping the militia; and numerous other subjects of like character, demand expenditures which cannot legitimately be charged as being for the current uses of the military establishment.

A critical examination of these expenditures, some of them authorized

Digitized by Google

by Congress without any recommendation on the part of this Department, will show that the total expenditures are largely in excess of the amount absolutely necessary for the actual requirements of the Army itself.

I refer especially to this subject in order that it may be understood that a great part of the money appropriated for this Department by Congress is for expenditures similar to those named, and should not be considered as required for the support of the Army, but arises from the trusts imposed upon the military branch of the Government in the execution of works of internal improvement, for the benefit of the people.

The act of March 3, 1873, for the establishment of a military prison, made no appropriation to meet any of the expenses necessary to carry it into effect. In order, however, that no time might be lost, a preliminary board, composed only of Army officers, was constituted to collect information and material for commencing more definite labor upon the plan so soon as Congress should appropriate the means. This board, in its investigations, has succeeded in doing even more than was anticipated; and, fortunately, two gentlemen from civil life, who have devoted much time and zealous study to the subject of reformatory prison discipline, have been found willing to give a share of their time gratuitously, until the appropriation shall be made, to the work of preparing a plan and regulations for the military prison. This has enabled me to carry out the provisions of the second section of the act, by appointing the board therein prescribed. Their report will form the subject of a future special communication to Congress.

It is very difficult, under existing laws, to supply the Army with field-musicians, two of which are allowed to each company. As this is an essential part of the military establishment better facilities for obtaining musicians should be afforded, by the passage of an act to authorize the enlistment of boys not under twelve years of age, always with the consent of parents or guardians. This provision did exist until, probably through inadvertence, the law of 1864, against enlistment of minors, put an end to it.

It is unnecessary to allude to notorious cases of efficient service by music boys, even on the field of battle, to illustrate their perfect competency for all the duties required of musicians. While they make the best musicians, they generally, at more advanced age, have become most valuable non-commissioned officers as the fruit of their early training. This plan has, too, the merit of being a most useful charity, for it would provide for many sons of old soldiers, living and dead, who now are without aim or object in life, and in danger of becoming worthless men, but who, if enlisted, would have the benefit not only of tuition in music, but also in the useful common branches of education taught at the depot school.

The subject of the discharge of minors who have enlisted in the Army has ever been a perplexing one. The most stringent prohibitions have

Digitized by Google

been laid upon recruiting-officers, and whenever a minor has passed from the rendezvous to the depot, and is there detected by the examining board, he is sure to be at once discharged. In spite of every precaution a large number of young men, minors in the eye of the law, but actually men who have been practically their own masters for a considerable time, do pass themselves as of full age, freely take the oath to that effect, as embodied in the contract of enlistment, and are transported, at considerable expense, to regiments. Here, on the least dissatisfaction, or after commission of some crime involving punishment, they forthwith write to the parents, who have hitherto, perhaps, bestowed but little care upon them, and a moving appeal is made to the Department for their discharge. Since the passage of the act of May 15, 1872, the Department has judged that it had no discretion left, and when the proof of minority is clear, and the consent of parent or guardian has not been obtained, discharge is invariably given. Since the passage of the act referred to, and up to June 30, 1873, 296 applications for discharge from this cause have been received. Great expense to the Government, as well as frequent evasion of punishment, and consequent disorganization of necessary military discipline, is thereby caused; nor is the ostensible object of the parents to recover the child effected, because the latter is discharged hundreds of miles from home, and even if disposed to return, which is seldom the case, has not the pecuniary means. The recruiting-officers are charged with the expenses of enlistment of minors when clearly guilty of want of due care; but it is exceedingly difficult in many instances to ascertain the true age of a man, even with such critical examination as recruits are subjected to. Thus, while the Government is imposed upon, under an oath, by the recruit, while it, in good faith, feeds, clothes, transports to a regiment, and often pays him, it is by present legislation left without protection or remedy against the fraud. The recruit obtains all the benefit, sometimes is transported to a region where he wishes to settle, and then obtains a discharge with perfect impunity for his fraud.

It is suggested that some action be taken toward the passage of a positive law to provide for the punishment of recruits who have deceived the recruiting-officers by falsely swearing to their age or physical condition. In my judgment he should be immediately turned over to the proper tribunal, and the United States law-officer in whose district the recruit may have committed the offense should be required to prosecute him for the false oath he has taken and for the great expense he has given the Government.

The practice, which prevailed to a considerable extent, of Army officers visiting the seat of Government during the session of Congress, attempting to influence legislation by interviewing members of Congress, and presenting business which should only be brought to their attention through the head of the Executive Department, became such a serious evil that on March 15, 1873, I caused an order to be issued directing that

Digitized by Google

no officer, either active or retired, shall, directly or indirectly, without being called upon by proper authority, solicit, suggest, or recommend action by members of Congress for or against military affairs. The necessity for this order was apparent. Members of Congress have frequently brought the subject to my attention, and have made complaint, very justly, of the persistent efforts made with them personally to influence their views on legislation. The order, as it itself says, is not intended to preclude officers from illustrating or expounding a measure before Congress which may have received the favor or sanction of the President, Secretary of War, or the General of the Army. The experience of officers when so used is and will be viewed as valuable, but it was and is intended to restrain officers from urging their views in an improper manner upon members of Congress, and in consuming the time of those intrusted with the necessary legislation of the Government. That order will be enforced so far as it lies within my power and authority to accomplish it.

I had the satisfaction during the spring, in company with the Lieutenant-General of the Army, to make a tour of inspection through the Department of Texas, and to visit many of the posts located on the frontier in that region.

My attention was particularly directed to the efficiency and good conduct of the troops there stationed. Situated as many of the posts are, remote from the comforts of civilization, it was a matter of great satisfaction that discipline was observed, and that all the requirements of good military service were strictly carried out. At several of these posts where both white and colored soldiers were stationed, the general good conduct and fine military appearance of all the troops composing the garrisons were prominent to a marked degree.

In section 24 of the act of July 15, 1870, the pay of officers of the Army was established, and provision was made that the sums therein specified should be in full of all commutation of quarters, fuel, forage, servant hire and clothing, longevity rations, and all allowances of every name and nature whatever, and should be paid monthly by the paymaster. Further legislation is necessary to define the scope of this provision, whether it is intended to include certain things, such as transportation in kind of officers' servants, transportation of officers' horses and baggage, authorized in regulations before its passage, but not held to be emoluments, or does it have reference simply to the money allowances then received by officers of the Army. If the former construction is to be given it, it then really discontinues the allowance of servants altogether, which all former laws and regulations have encouraged, and would often unfit an officer for effective service by depriving him of transportation for authorized horses and baggage that often could not be purchased or obtained at his new station. All these have been furnished by the Government from its foundation, and for its own interests, primarily, the benefit to the officer being but incidental, and while it is presumed that

Digitized by Google

the clause referred to intended to embrace in a salary all that had been included in money allowances, in providing for the compensation of officers of the Army, a distinct enunciation of its meaning by Congress is desirable. I deemed it necessary, on the 25th day of February, 1873, to issue the following order in connection with this subject, which will continue as the rule unless further legislation is had:

The payment of rent, or any allowance for fuel or quarters of officers' servants, is hereby prohibited until more specific legislation shall sanction it.

During the past year the five Inspectors-general of the Army have been exclusively subject to the orders of the Secretary of War and the General of the Army, and have made careful and thorough inspections of the South, the Departments of Texas, of the Missouri, of the Gulf, of Arizona, of Dakota, and of the Columbia, excepting Alaska. In the Departments of Arizona, Texas, Dakota, and the Columbia, thorough examination was made into the condition of the personnel and material of the Army at all the remote and widely-dispersed posts, stations, and depots within the limits of those departments, (with the exception of Alaska,) embracing one hundred and seventeen military posts, garrisoned by eighteen regiments of infantry, seventeen companies of artillery, and eight regiments of cavalry. Besides this, other minor inspections and investigations have, from time to time, been made by the officers of this corps, involving voluminous reports, which have been made without any expenditure for clerical assistance. Scrutinizing examinations have been made by the Inspectors-general of the accounts of all officers who have made important disbursements of public money during the year. The funds received and expended by them, with the balances reported due the United States, have been carefully verified by official statements received from the Treasury Department and depositories, and under this system it is hardly possible that a defalcation or fraud on the part of disbursing officers of this Department can escape timely detection.

The assistant inspectors-general have been attached to the headquarters of the various military divisions, and they, as well as several officers who have been temporarily assigned to duty in some of the remote departments as acting assistant inspectors-general, have been actively and usefully engaged in the duties pertaining to their positions.

Since the close of the war, in the Quartermaster's Department, much time and labor have been bestowed upon the examination and settlement of the accounts of officers for disbursements made during the rebellion and since its close. Most of these accounts have been adjusted, and the accounts of disbursing officers of that Department are now examined promptly as received. Within the past two years I have caused the forms and methods of business in this Department to be simplified, to the advantage of the service and the relief of officers.

Much difficulty is experienced in keeping the expenses of the Quartermaster's Department within the amounts appropriated by Congress,

Digitized by Google

and so apparent was it during the past fiscal year that the appropriation for barracks and quarters would not admit of any expenditure from that appropriation beyond the payment of rent of offices and hire of quarters for troops, that it was found necessary early in the spring to entirely arrest any work upon the repair and construction of barracks and quarters. Notwithstanding this necessary and sharp measure, which involved much inconvenience to the troops, crowded into buildings much in need of repair, or cantoned in tents and huts too much exposed to the inclemency of the weather, the liabilities have to a small amount exceeded the sum appropriated.

It is necessary that I should ask the attention of Congress to the difficulties of keeping accounts, and of paying for supplies and services, which arise under the operation of the act approved July 12, 1870. The act in its operation requires every disbursing officer to keep a separate and distinct set of accounts under every head of appropriation, and to keep a balance of money on hand to meet the demands under each head, thereby compelling officers to keep to their credit at depositories much larger balances than heretofore. A remedy for this is to make the appropriation for the Quartermaster's Department under one head as a single appropriation, requiring, as now, that the estimates upon which the appropriation is based shall be submitted in detail. No benefit can arise in practice from the system of keeping separate heads of appropriation in this Department, while its existence gives many occasions for error and mistakes, and is a burden upon the officer who is required to disburse the public money, as well as upon the Treasury. The evils of the present system are fully set forth in the report of the Committee on Expenditures in the War Department, made to Congress at its last session.

As many lieutenants of the line are often required to assume the labors and responsibilities of acting assistant quartermasters, it is recommended that an allowance of $10 per month be made by law to officers so detailed, as a moderate compensation to them for the risk as well as the labor in disbursing public money and keeping and distributing stores.

Of the fifty railroads which, at the close of the war, under executive orders, purchased from this Department railroad material to the appraised value of over $7,500,000, thirty of them have paid their debts in full. The remaining twenty are still in our debt to the amount of $4,658,924.07. The total amount collected from these sales, with interest and expenses, has thus far been $5,116,605.53.

I recommend the passage of a law which will enable the Department to collect from the Post-Office Department the postal earnings of several of these delinquent railroads. The bonds of the roads given at the time of purchase pledge them to use these earnings in liquidation of their debts, but they refuse or persistently neglect to give to the Post-

Digitized by Google

master-General the necessary formal orders to turn over the funds to this Department.

Ten thousand dollars was appropriated during the last year for the prosecution of the work on the artesian well at Fort D. A. Russell. Since then considerable progress has been made in that work. It has now reached a depth of 1,005 feet. The work has now for some hundreds of feet been carried through a stratum of clay, and there is good reason to hope that when the clay is pierced the water will be reached, and a strong flowing well developed. From the importance to the people of the Territories of Colorado, Wyoming, Montana, and Dakota, which a series of flowing wells would have upon the development of their material interests, I recommend that an appropriation be made to continue the present experiment.

Under the provisions of the appropriation act approved March 3, 1873, advertisement was made for bids to provide head-stones for the graves of deceased soldiers in the national cemeteries. Eighty bids were received and opened in public by the Quartermaster-General on the 6th of September.

The advertisement called for bids for furnishing head-stones of gray granite and white marble of a specified quality, as these materials, in my judgment, best fulfilled the requirements of the law in respect to "decency, durability, and cheapness."

A careful examination of the bids resulted in an award of contract for granite head-stones for the National Cemetery at Fredericksburgh, Va. For all the other national cemeteries contracts have been awarded to the four lowest bidders for white marble head-stones. The responsibility of the bondsmen of these contractors is required to be certified to by the United States district judge, or by the collector of internal revenue of the district in which they reside.

A small slab, four inches thick, has been prescribed for the known, and a block six inches square for the unknown dead. The former will number about 148,000, and the latter about 105,000.

Particular care has been taken to have these head-stones *permanent* when once erected. The entire cost of the slabs and blocks, under the contracts as awarded, should they be entered into by the successful bidders, will amount to $770,045.48.

Should, however, any of the parties to whom awards have been made fail to enter into the contracts prescribed, none of the contracts will be executed unless the whole work can be contracted for within the appropriation of $1,000,000, the limit prescribed by the law.

The appropriation of $100,000 made by Congress in the act approved March 3, 1873, for the erection of a depot at San Antonio, Tex., has not been expended, nor have any decided steps looking to the erection of the buildings contemplated been taken. A personal visit to San Antonio last spring, and consultation with the Lieutenant-General of the Army and other responsible officers, having satisfied me that no necessity

Digitized by Google

exists for the expenditure of the money, and that the small force that will hereafter be required at that place could, economically, be provided for by rented or leased buildings. I recommend that the sum appropriated be used for the rent or purchase of such sites of posts in Texas as may be found to be actually needed for military purposes.

The report of the Commissary-General shows that the average cost of the Army-ration for the year has been seventeen cents and forty-eight hundredths, showing a trifling increase in cost over that of the previous year.

It is recommended that an act be passed authorizing the issue of tobacco to enlisted men of the Army, as a component part of the Army-ration, as near as may be in amount to that authorized to be sold to them.

Under the act approved March 3, 1873, to provide for the better care and protection of subsistence supplies, there have been appointed one hundred and forty-nine commissary-sergeants, who have been assigned to military posts. A considerable number of them have been in the performance of their duties a sufficient time to evidence to the Department the benefit that was anticipated from a body of experienced and worthy non-commissioned officers being in charge of this class of public property.

The Surgeon-General reports the following distribution of the first part of the Medical and Surgical History of the War, viz:

Sent to congressional committees as specimens	12
Sent Senators	1,000
Sent Representatives	2,000
Sent Library of Congress	50
Damaged and imperfect copies	70
To be issued by Surgeon-General's Office	1,868
Total number of copies printed	5,000

The second part of the work is now going through the press as rapidly as possible.

The recommendation made in former years is renewed, that the catalogue and tablets of the anatomical section of the Army Medical Museum be published in a style similar to Morton's Crania Americana. A bill for this purpose passed one house of Congress during the last session, but failed to become a law.

I am compelled to repeat the statement made in previous reports that very serious and increasing injury has resulted to the service from the continued prohibition of appointments and promotions in the Medical Corps. Thoroughly educated medical men, in selecting the Army as an occupation, are actuated by the reasonable prospect of promotion, but to render it impossible for them ever to advance in rank is to deter many desirable men from becoming candidates. I call attention most earnestly to the statement of the Surgeon-General as to the pressing necessity for such legislation as will secure to our

Digitized by Google

officers and soldiers the efficient attendance in wounds and sickness which the Government should provide, and which will make a position in the Medical Corps of the Army now, as formerly, an object of ambition to the best educated and best qualified young men in the profession. There are now 64 vacancies in that corps, viz: 2 assistant medical purveyors, 5 surgeons, 56 assistant surgeons, and 1 medical store-keeper. In my judgment it is absolutely necessary for the welfare of the service that the corps be opened to appointment and promotion.

The Paymaster-General strongly urges the necessity of providing by legislation for an increase of the present force of paymasters, now much reduced by the operation of the act of March 3, 1869, prohibiting new appointments and promotions in certain staff corps and departments. The number of paymasters authorized by the Army organization act of July 28, 1866, was sixty. There are now but forty-four in service. The Paymaster-General recommends that the number be fixed by law at fifty-two, and that the sixth section of the act of March 3, 1869, be repealed, and promotions and new appointments be allowed.

Experience has shown that it is just that a greater period than thirty days be allowed to an officer on leave of absence without reduction of pay. Thirty days barely suffices to enable an officer to travel from and to his remote station in the West.

It is apparent that the act approved May 15, 1872, concerning the pay of enlisted men and establishing a system of deposits, has proved of much benefit to the soldier. The number of desertions has not been reduced to as great an extent as had been hoped, but still that number was five hundred less than in the year ending June 30, 1871. It would be difficult to devise legislation better calculated to encourage re-enlistments, reward faithful service, and diminish desertion, and it is believed its ultimate effect will be to heighten the tone of the whole enlisted force of the Army.

It appears from the report of the Paymaster-General that the average amount of deposits per company made by enlisted men during the past fiscal year was $482.26. The largest amounts of deposits per company were made in the Departments of Arizona and Columbia. In these departments there was the greatest amount of field operations. It may be safely inferred, then, that more deposits will be made by the enlisted men in time of war than in time of peace; and this leads to the conclusion that had a wise system of deposits been in operation in our volunteer Army during the rebellion, the Government would have had the handling of many millions of dollars for several years. During the last years of the war there were about 14,000 companies of troops employed, which would give, at the rate of $1,500 deposited by each company, $21,000,000 per annum.

The Corps of Engineers has been actively engaged upon the defensive works of our coasts; upon river and harbor improvements, and the surveys for them, and for the protection of the navigable waters of the

Digitized by Google

United States against deterioration, whether from bridging or other causes; upon the geodetic and hydrographic survey of the lakes; upon surveys for the defenses of the coasts; upon military surveys and reconnoissances in the interior; upon geographical and geological explorations; upon public buildings and grounds in the District of Columbia; upon the construction of light-houses, and upon the demarkation of the boundary between the United States and Great Britain.

The works projected and approved for the modification and strengthening of our sea-coast defenses and fortifications have been advanced with a rapidity consistent with economy and efficiency, and the works for our principal harbors now contain quite a number of platforms ready for their armaments of guns of the largest calibers. Heavy guns mounted in covered positions, along the shores of the inlets to our harbors, must always be the basis of any successful defense, and the works projected and in course of construction should be prosecuted to completion, and be suitably armed.

The Battalion of Engineers numbers 308 enlisted men, and is stationed at the Military Academy for instruction of cadets, and at Willet's Point, New York Harbor, where it forms the school of torpedo defense of the channels to our harbors, and the guards and workmen for the care and distribution of engineer-equipments. During the past summer a number of detachments have served with advantage in the geographical and geodetic explorations. The appropriations asked for the engineer depot and post are recommended to Congress, and the recommendation for one chief musician and two principal musicians for the battalion approved.

With the small appropriations granted for trials with torpedoes, the investigations upon this subject have been continued, to the benefit of our system of submarine mines. This accessory for the defense of our harbors in recent years has developed into one of great importance among the maritime powers, and to investigate the recent electrical methods and systems of torpedoes, as well as to procure certain materials, two officers of engineers were sent during the summer to Europe. The results of their mission are the collection of valuable information on this subject, and a saving of expenditure to the Government.

The river and harbor improvements mentioned in my last annual report have been continued, and the works and surveys connected therewith have been carried on during the past year with vigor. Detailed information in regard to each specific improvement, and the results of surveys directed to be made by the river and harbor appropriation acts, may be found in the report of the Chief of Engineers.

The improvement of our rivers and harbors consists, chiefly, in giving increased width and depth to existing channel-ways and basins, and protecting them, or in creating new channels and basins and giving them protective works. The operations to this end comprise the removal of obstructions of various kinds, such as rock in place and bowlders,

Digitized by Google

bars of clay, sometimes indurated; of gravel, sand, and other alluvial matter; of rafts, often extending from the surface of the river nearly to the bottom, formed by masses of drifting trees, or the accumulation of slabs, edgings, and sawdust; of timber and other constructions placed in channel-ways to obstruct or close them; the construction of dikes, dams, wing-dams, and revetments, and the building of canals, breakwaters, and piers, all tending to promote the general interests of commerce and navigation, by furnishing increased facilities of communication and giving greater security to trade.

The condition of the public works and grounds of Washington, and the progress made in their construction, repair, and improvement, are very creditable to the officer in charge. The improvements exhibit good taste, with much economy of expenditure. Many vacant and unimproved reservations have become attractive places of public resort, at little expense.

In accordance with the proviso attached to the appropriation for the improvement of the channel of the Delaware River at or near the Horseshoe Shoals, a board of engineers was convened; and in view of their report upon the feasibility and expense of the plan proposed for the prevention and removal of the obstruction, it has been determined to defer final action upon the proposed plan until after the method adopted by the local authorities is fully tested, and it is found that the means used by them will not be sufficient to maintain an open channel during the winter months.

Section 3 of the river and harbor act of March 3, 1873, directed that a report be made upon the practicability of bridging the channel between Lake Huron and Lake Erie, without material injury to the interests of navigation, and upon the number and character of vessels navigating that channel. The subject has been committed to a board of experienced engineer officers, who are now engaged upon it. It is expected that their report will be received during the early part of the session of Congress.

The removal of the wreck in the channel-way off Sandy Hook, required by the act approved January 3, 1873, was completed March 6, leaving a clear depth of 25½ feet at mean low water.

Under the authority granted by the act approved January 23, 1873, a contract was closed for the construction of an iron hull for a light-draught snag-boat for use on the Mississippi, Missouri, and Arkansas Rivers, and it is expected that the boat will be ready for service during the present season.

The Lake Ontario Shore Railroad Company submitted a project for a bridge across the Genesee River, and in accordance with the provisions of the second section of the act authorizing its construction approved March 3, 1873, certain modifications in the plan were required, and of these the president of the railroad company has been notified.

In carrying out the provisions of recent acts of Congress authorizing

Digitized by Google

the construction of bridges, my attention has been called to the fact that certain bridges have been built, and that one is now being constructed across navigable waters of the United States without any authority of law; and further, that certain parties claim the right to bridge, and that one of those parties is now constructing a bridge under authority claimed to be derived from acts granting right of way for railroads through public lands and granting lands to aid in the construction of a road chartered by State authority. In view of the provisions of the more recent acts of Congress requiring the Secretary of War to maintain a supervision over the location and construction of bridges crossing navigable waters of the United States, in order that the interests of navigation shall be protected, I feel it my duty to invite the attention of Congress to this subject and to suggest such general legislation as may be deemed necessary for the preservation of the great natural channels of commerce.

In this connection I have respectfully to recommend that the act authorizing the construction of a bridge across the Arkansas River at Little Rock, Arkansas, approved May 31, 1872, be repealed, for the reason that a bridge constructed in compliance with its terms would materially obstruct and impair the navigation of the river. A previous act of Congress (that of July 1, 1870) contains all the provisions for bridging this river at Little Rock essential to the preservation of the channel.

The survey of the lakes has been continued with success during the season. The survey of Lake Michigan has been pushed forward nearly to completion, and that of the Saint Lawrence River has been extended nearly to Lake Ontario. Other portions of the survey are in satisfactory progress; new surveys of special localities have been made, the longitude of important points determined by telegraph; assistance to the geographical and geological survey of adjacent States rendered; and meteorological and lake-surface observations continued through the entire lake region.

The main field operations of the geological exploration near the fortieth parallel, between the Sierra Nevada and eastern slope of the Rocky Mountains, were completed in November last, and the maps and results are being prepared for publication at an early day. Special examinations, giving important results, have been made of noted geological structures, and of the evidences of glacial action in the Sierras.

The geographical and geological surveys and explorations west of the one-hundredth meridian in Nevada, Utah, Colorado, New Mexico, and Arizona, have been prosecuted with great vigor and success. The field labors terminated in December, after which the work of preparation of the maps and observations for publication was continued in the office in this city. The field operations of the present season, embracing, in addition to the usual observations in the various branches of the survey, the erection of a field astronomical observatory at Ogden, Utah, and the

Digitized by Google

determination of an astronomical base, commenced June 1, with an efficient organization.

The officers of the Corps of Engineers on detached duty at the headquarters of general officers commanding military divisions and departments have rendered valuable services in preparing such maps and sketches and making such surveys and reconnaissances as were required by their commanding officers. Besides these regular duties, several special reconnaissances have been made, yielding important information. Among these the reconnaissance of the lava-beds and surrounding country, the scene of operations against the Modoc Indians; the survey of the Yellowstone River, as far up as practicable; the reconnaissance of the head-waters of the Rio Grande and Southwestern Colorado; and the reconnaissance to discover an approach to the Yellowstone Lake Basin from the south or southeast, thus opening a new and shorter route to the National Yellowstone Park and the mining regions of Montana, together with the results of astronomical observations to determine the positions of important points, are particularly referred to in the report of the Chief of Engineers.

The commission appointed by the President, in accordance with the act approved March 3, 1873, to examine and report on a system of irrigation in the San Joaquin, Tulare, and Sacramento Valleys, California, met and organized in San Francisco in May, and proceeded at once to examine the valleys in question and the streams emptying into them. By the end of June they had made satisfactory progress. They are still engaged in this labor, and in the collection of information to enable them to render a full report upon the subject of investigation.

A complete set of the published maps and reports of the Engineer Department, together with sets of photographic views of remarkable natural features of the western country, and models of important engineer work of river and harbor improvement, and of armament, were prepared and forwarded through the commissioner appointed by the President to represent the United States at the Vienna Exhibition, with authority to present them, at the close of the exhibition, to the engineer department of the Austrian army.

The estimates of the Chief of Engineers are submitted separately, as presented by that officer, viz:

Fortifications and other works of defense	$3,376,000
Public buildings and grounds and Washington aqueduct	1,118,056
Surveys	480,000
Engineer depot at Willet's Point, N. Y	20,800
Office expenses	29,260
Improvement of rivers and harbors	15,464,540
Total	20,488,656

No steps have been taken by me to carry out the provisions of the act of March 3, 1873, authorizing the survey, plat, and sale of the cemetery grounds upon the Fort Gratiot military reservation in Michigan,

Digitized by Google

as the formal preliminary action of the city authorities of Port Huron has not yet been completed.

The report of the Chief of Ordnance calls attention to the many potent arguments so often presented in favor of the repeal of the law prohibiting promotions in the corps which he represents. He refers to the hardship and humiliation to which officers of merit and long service have been subjected since the passage of that law, by being deprived of their deserved promotion, the only reward held out in their profession for years of duty well performed. Their claims to promotion appeal strongly to the attention of Congress.

A board of experienced officers, of which Gen. A. H. Terry was president, was convened in September, 1872, for the selection of a breech-loading system for the muskets and carbines of the military service. After an exhaustive trial of all the systems presented, the board selected the Springfield breech-loading system as the one, of all those brought before it, which is best calculated to meet the demands of our military service.

The report of the board was approved, and the Springfield system of breech-loader will henceforth be used for the muskets and carbines of the Army. At the same time the caliber of all small-arms for the service—rifles, carbines, and revolvers—has been fixed at .45 of an inch. It is now a question of grave importance whether new arms of the accepted system shall not be made at once in sufficient quantities for a reserve supply in case of war, and to this end an appropriation of $500,000 has been asked for the next fiscal year for the manufacture, together with the materials now on hand, of about 35,000 arms.

The annual appropriation of $200,000 for arming and equipping the militia, an amount fixed by Congress during the early part of the century, is now found inadequate, by reason of the great increase of population, to supply the wants of the whole body of the militia, and it is therefore recommended that the appropriation for that purpose be increased in a manner proportioned to the increase of the population since the passage of the act of 1808, providing for the distribution of arms to the militia of the country.

I feel great hesitation in recommending increased appropriations at this time, but I deem it my duty to say that the armament of our sea-coast defenses, which involves the question of the defense of our principal sea-board cities from attack, in case of war with a naval power, is a subject demanding the earnest attention of Congress. The principal cities on our coast are in a very defenseless state, and the tedious and costly work of preparation cannot be commenced on the breaking out of a war, with the hope of accomplishing any adequate result. The work must be done in time of peace, without waiting for an uncertain period in search after perfection in gun-constructions. The importance of this subject increases with the earnest and continued efforts on the part of all nations to supply their forts with the most improved armament, and

Digitized by Google

should war find this country without a proper defense against iron-clads and their great guns, the responsibility cannot rest on this Department, as the importance of the subject has often been brought to the attention of Congress. An appropriation of $1,449,552 is estimated for by the Chief of Ordnance for the next fiscal year for the purchase of smooth-bore guns and for carriages, which sum will provide for one-sixth, only, of the guns and carriages that will be required for fortifications which will be ready by the 30th of June, 1874. This amount is not embraced in the regular estimates of appropriations for the Army, as heretofore alluded to, but it is a subject of great importance, and the question of these appropriations is respectfully submitted.

The heavy rifled guns selected for fabrication and test under the act approved June 6, 1872, are now in process of manufacture, and will be completed during the winter. Valuable information and experience are to be gathered in the trial of these guns, the result most probably leading to the early adoption of an effective rifle of suitable caliber for the service; and in this connection I would recommend the purchase of a suitable proving ground for the proper trial of these experimental heavy guns.

The cheapness of cast iron, and the marked progress attained in the manufacture of gunpowder in the past year, induces a recommendation that an appropriation of $75,000 be granted, to be applied in the fabrication and trial of 12-inch cast-iron rifled cannon, that the capabilities of the metal for rifle constructions of large caliber may be put to the fullest test, in the hope that its practical utilization for this purpose may be conclusively assured or denied.

The powder in the hands of the Department is, on account of the want of proper storage-room, concentrated in large part in the magazines of our sea-coast fortifications, where, under the searching influences of the salt air, it is rapidly undergoing deterioration. For its better preservation a large powder-depot should be established in some region where neither public nor private interests would be endangered by its proximity, and an appropriation of $100,000 is recommended for the purchase of a suitable site and the commencement of magazines.

The abolition of some of the smaller arsenals, and the application of the proceeds of their sale to the erection of a large arsenal of construction on the Atlantic coast, is again urged on strong economical grounds, and it is recommended that a law be passed authorizing the Secretary of War to make sale of any of the smaller arsenals at such times as would be most advantageous to the Government, and to apply the proceeds as suggested.

The sale of Kennebec arsenal, Detroit arsenal, Pikesville arsenal, and the small lot or tract at Sag Harbor, Long Island, now no longer needed for public purposes, is recommended.

By the act of Congress approved June 10, 1872, the Secretary of War was directed to sell the Mount Vernon arsenal, Alabama, pursuant to

Digitized by Google

a recommendation made for its disposal as a part of the public domain. Subsequent to such recommendation the exigencies of the service required that the property should be used by the Quartermaster's Department for military purposes, and the period when such necessity shall cease to exist is very indefinite. Under these circumstances the repeal of so much of the act of June 10, 1872, as relates to the sale of this property is recommended.

That portion of the same act which directs the sale of the Apalachicola arsenal should, in my opinion, be repealed, for the reason that the property was granted to the State of Florida in 1870, by the act approved December 15 of that year, under the name of the Chattahoochee arsenal.

The Department feels much embarrassment arising from conflicting claims founded on alleged infringements of patent-rights in the construction of breech-loading guns at the national armory. Officers of the Ordnance Corps, in the execution of their official duties, are seriously annoyed by private actions for damages, instituted by persons claiming to hold valid patents which have been infringed in the productions of the Government armory, and some legislation seems to be required in order to enable the Department to dispose of the claims.

The fifth section of the act of July 12, 1870, which provides "That all balances of appropriations contained in the annual appropriation bills and made specifically for the service of any fiscal year, and remaining unexpended at the expiration of such fiscal year, shall only be applied to the payment of expenses properly incurred during that year, or to the fulfillment of contracts properly made within that year, and such balances not needed for the said purposes shall be carried to the surplus fund: *Provided*, That this section shall not apply to appropriations known as permanent or indefinite appropriations," is injurious to the interests of the Government where permanent buildings are to be erected, and appropriations for this purpose should be allowed to run for three years instead of one, as now limited by that act. It recommended that the act be modified accordingly.

Systematic and continuous instruction of the Army in military signaling and telegraphy has continued during the past year at the school of instruction and practice at Fort Whipple, Va., and in the Department of the Missouri, and the special attention of some of the most powerful foreign goverments has been directed to these branches of military science, and they have taken pains to procure the minute details of our equipment and apparatus.

Recruiting for the signal-service has been successfully conducted, the standard of acquirement being maintained by special examination of those enlisted. After selection and enlistment, the men are at once placed under a course of drill and instruction, and after a second examination those especially designated for duty at stations are drilled, examined, instructed, tested by practice, instructed in the higher

Digitized by Google

branches of the service, and again examined and tested before being intrusted with the management of stations of observation.

The Chief Signal-Officer renews his recommendation for the establishment by law of a permanent Signal Corps, or for such legislation as will secure a permanency for its details. He insists that the extent of the service and its now material importance should commend this subject to the attention of Congress.

The whole number of stations from which regular meteoric reports are now received is ninety-two, of which seventy-eight are in the United States, eleven in Canada, and three in the West Indies.

The regular telegraphic reports from Havana began on August 6, from Kingston, Jamaica, on September 18, and from Santiago de Cuba on September 29. Three other points in the islands of Porto Rico, Guadeloupe, and Barbados, will be equipped as soon as observers can be designated. It is a matter of regret that there is no international arrangement with the authorities of any of these islands, nor is there, at present, any return of weather-telegrams provided for or officially requested, Steps are in contemplation by which it is hoped the necessary arrangements will be effected.

The display of bulletins and weather-charts at stations, the supply of prompt and gratuitous information to the press, and the exhibition of day or night signals at times of probable special danger, for the benefit of shipping and commercial interests, have been continued.

A plan has been adopted whereby synopses of reports and probabilities have been forwarded to many points in the interior not reached by telegraph, and this plan has given satisfaction to the farming and interior population reached.

There are nineteen special river stations from which reports of the depths of water in the principal rivers of the United States are daily made by telegraph, at particular seasons, during which danger from freshets may be anticipated. River reports are also made from twenty of the regular stations.

These data are widely published and distributed along the line of the rivers, and contribute to the convenience and safety of the river commerce, by the constant and accurate knowledge given of the depth of water in the channels.

The benefits resulting from these reports, now in the second year of their issue, have been fully acknowledged by the various interests they have advanced.

The total number of special river-bulletins issued has been twenty-three thousand two hundred and ten. Eight thousand nine hundred and eighty-two printed copies of the weather-report are displayed daily.

Steps have been taken to carry out the legislation of the last Congress authorizing the establishment of signal stations at light-houses, and such of the life-saving stations on the lake or sea coasts as may be suit-

Digitized by Google

ably located for that purpose, and to connect the same with such points as may be necessary for the proper discharge of the duties of the signal service, by means of a suitable telegraph-line, in cases where no lines are in operation. The plan in contemplation proposes the establishment of signal stations at life-saving stations and light-houses along the ocean-coast of New Jersey, from Sandy Hook to Cape May, a distance of twenty-five miles from each other. A line connecting the stations at life-saving stations and light-houses along the coast from Norfolk, Va., to Cape Hatteras, N. C., a distance of one hundred and thirty-seven miles, and on one of the most dangerous coasts of the United States, is being constructed. It is expected that the above-mentioned lines will be completed during the present year.

The ascertained comparative accuracy of the deductions from reports styled "probabilities" has been more clearly presented in this than in preceding years. The percentage of verifications has been mathematically computed for each of the geographical districts mentioned in the reports. With a more rigid and scrutinizing mode of calculation than was before adopted, the percentage of verification has improved. The analysis of the year's work indicates clearly, at once, the wisdom of judiciously increasing the number of stations.

The Department acknowledges, as in previous years, the general support of the popular opinion of scientific men, and of the press, in its efforts to successfully carry on this work. Errors have occurred, but it has been generally recognized as inevitable that some must occur in the present condition of science. The great utility of the work is no longer doubted. It has achieved results, the promise of which, a few years ago, could hardly be hoped for.

It is mentioned in connection with this subject that arrangements have been made with the meteorological officers of Russia, England, and Turkey, to commence on January 1, 1874, an exchange with the United States of the daily reports taken simultaneously at the different stations throughout the great extent of the Russian and Turkish Empires, the British Islands, and the United States. The co-operation of the systems of other nations is expected.

My annual inspection of the affairs of the Military Academy and Corps of Cadets, in June last, disclosed a very creditable state of discipline, and an attention to study very commendable in the cadets.

One of the effects of the act of Congress approved February 2, 1872, increasing the congressional representation of the several States, was to increase the Corps of Cadets from 293 to 342. This is of marked advantage to the Academy, which, on account of the falure of many of the candidates for admission to pass the necessary examination, has not, in a long series of years, instructed the number of young men that was allowed by law to be educated at West Point. Examinations for admission are held twice yearly, in May or June and in September, and when a candidate not possessing the requisite qualifications fails to pass, as a

Digitized by Google

large portion of those presenting themselves have done, their districts remain unrepresented during the period embraced between the date when they fail and the next examination, and the United States loses a cadet for the same period.

The report of the Board of Visitors, which this year had an opportunity of witnessing the examination of the candidates, comments upon the large proportion of those failing to those admitted; during the past year there were 119 candidates admitted and 87 rejected; of the latter number 13 only were rejected by the medical board; and at the semi-annual examination in January next it is more than probable that a considerable number of those admitted in June and September last will also fail. These facts furnish a strong commentary upon the present mode of selecting candidates for a military education at West Point.

The large number of those failing to meet the present standard clearly shows that due regard has not, in many cases, been paid to selecting those whose attainments qualify them for admission. If the members of Congress were a little more rigid in requiring those they propose nominating to be thoroughly conversant with the rudiments of a common-school education, their friends would escape the mortification and expense attendant on their rejection.

The Board of Visitors were thorough in their investigation into the affairs of the academy last June, and the attention of Congress is invited to the recommendations contained in their report.

A new set of regulations for the government of the Corps of Cadets has been prepared, and will very shortly go into execution.

The increase of the Military Academy band, the only one now provided for by law, which is very small and the pay of which is wholly insufficient to attract to or retain in the service competent musicians, when they can secure much larger salaries in the principal cities of the Union, is again urgently recommended to the attention of Congress. This subject was alluded to in my last annual report, and a bill was introduced to increase the number and compensation of the musicians, which, it is understood, passed one house of Congress, but was not taken up in the other. Its re-introduction and passage is earnestly recommended.

During the last session of Congress, the Committee on Expenditures of the War Department made an exhaustive report of the workings of this portion of the executive branch of the Government, and prepared a bill for a full and complete reorganization of the clerical force of the War Department.

I would earnestly represent that this Department has been peculiarly unfortunate as regards the rates of compensation paid its employés. It is hoped, therefore, that the report of the Committee on Expenditures of the War Department, above referred to, may receive careful consideration at the hands of Congress, and that action be taken upon the recommendations of the committee as to the required organization of the clerical force.

Digitized by Google

When from illness or other cause the Secretary of War is obliged to be temporarily absent, there is no person in the Department authorized by law to sign the money requisitions upon the Treasury and other papers necessary for its current business. In almost all the other Departments of the Government one or more assistant secretary is provided by law, who is authorized to perform such duties in the absence of the head of the Department. There is no assistant secretary for the War Department; and in order that inconvenience to individuals as well as to the Government may not arise from delay caused by such absence, I recommend the passage of a law which will permit the Secretary of War to authorize the chief clerk, in case of illness or other temporary absence of the head of the Department, to sign requisitions and other papers deemed necessary for immediate signature.

I again refer to the fact that by joint resolution of Congress the Secretary of War was required to appoint a competent person to arrange and prepare for publication the official documents relating to the rebellion and the operations of the Army during the war, and to submit a plan of said publication and estimates of the cost thereof to Congress at its then next session. A person was appointed to assume this work, who was to receive a compensation of $2,500 per annum. Although the appointment was made at that time, no acceptance was filed, and no action was taken toward the arrangement and publication of the records.

As the appointment, under previous legislation, cannot now be made, for the reason that the act prescribed that payments should cease in two years after its passage, this legislation should be revived and the Secretary of War authorized to make the appointment. This is a great national work, of much historical value, and constant daily observation and experience renders it evident that early steps should be taken to collect and prepare these vast and important materials for publication.

WM. W. BELKNAP,
Secretary of War.

Digitized by Google

REPORT

OF

THE GENERAL OF THE ARMY.

HEADQUARTERS OF THE ARMY,
Washington, D. C., November 7, 1873.

SIR: I have the honor herewith to submit a statement showing the organization and actual strength of enlisted men in the Army, compiled from the official returns up to the latest date, and invite your attention to the recapitulation, showing 25,535 enlisted men of cavalry, artillery, and infantry, and 3,970 non-combatants, the whole aggregating 29,505, or 495 less than the number, 30,000, limited by law. In the active regiments the number of men sick and on the necessary details about the posts will fully equal 25 per cent., so that the actual strength for military service does not exceed 19,654 men.

In order that the Regular Army should fulfill its arduous duties on the frontier, as also form the model on which to shape the volunteer and militia forces of the United States, I earnestly recommend that Congress be asked to fix the limit of the enlisted force at such a figure as will give 30,000 men for the regiments of the line, and to provide specifically for the non-combatant detachments, such as the Engineer Battalion, the Ordnance Department, West Point detachments, Signal Department, ordnance and commissary sergeants, in the same manner as has been done for the hospital stewards.

The artillery regiments have an organization different from the infantry, viz, twelve batteries to a regiment. But of these only one is equipped and instructed as a battery of artillery, the other eleven companies of each regiment being armed with muskets, and instructed as infantry. In order to simplify the organization, and to apply the new tactics (now approaching completion) to all arms of service alike, with your approval I have ordered that the word "battery" apply technically to such only as are provided with horses and guns, and all others to be called companies. Some of the artillery officers think that the act of July 28, 1866, entitles them to the name "battery," whether they have guns or not, and it might be well to ask a modification of the law, so as to read "battery or company" for the artillery regiments, to correspond with the words "troop or company" used for the cavalry in the same act.

The number of regimental commissioned officers on duty, or belonging to the several departments and divisions, number in the aggregate 1,532; present for duty, 1,234; absent on leave or detached, 298.

The foregoing does not include the thirty-one second lieutenants recently appointed from civil life, now under orders to join their regiments.

I now inclose the annual reports of the division and department commanders, copies of which have been submitted to you as received.

The military divisions embrace the whole area of the United States, and these reports include the acts of all of the Regular Army, leaving

Digitized by Google

nothing to be added by way of history of the events during the past year.

The reports of all the department commanders, with the exception of that of the Department of Columbia, not yet received, are also herewith sent.*

No part of the Army is under my immediate control, and the existing Army regulations devolve on the Secretary of War the actual command of the military peace establishment, and all responsibility therefor, so that I forbear making any further recommendations or report.

I have the honor to be your obedient servant,

W. T. SHERMAN, *General.*

Hon. W. W. BELKNAP,
Secretary of War.

Statement showing the organization and strength of enlisted men in the Army, compiled from returns received at the Adjutant-General's Office up to October 31, 1873.

REPORT OF LIEUT. GEN. SHERIDAN.

HEADQUARTERS MILITARY DIVISION OF THE MISSOURI,
Chicago, October 27, 1873.

COLONEL: For the information of the General of the Army, I have the honor to submit my annual report of operations within this military division during the past year, accompanied by the reports of subordinate commanders.

The organization of the division remains unchanged since my last report, and consists of four departments, viz: The Department of Dakota, commanded by Brig. Gen. Alfred H. Terry, consisting of the State of Minnesota and the Territories of Dakota and Montana; the Department of the Platte, commanded by Brig. Gen. Edward O. C. Ord, composed of the States of Iowa and Nebraska and the Territories of Utah and Wyoming; the Department of the Missouri, commanded by Brig. Gen. John Pope, including the States of Missouri, Kansas, and Illinois, and the Territories of Colorado and New Mexico; and the Department of Texas, commanded by Brig. Gen. Christopher C. Augur, embracing the State of Texas and the Indian Territory.

It will be seen that the Military Division of the Missouri includes most

Digitized by Google

of the Western States and all the Territories east of Arizona, California, and Idaho, from British Columbia on the north to the Gulf of Mexico on the south. Within these limits, which include more than one million square miles of frontier country, are included great agricultural, pastoral, mining, and mercantile interests, and also 99 tribes of Indians, numbering about 192,000 persons, the majority of whom are wild and many of them hostile.

To give protection to the citizens of the frontier against these Indians and to guard the long line of our Mexican border against robberies by Mexican citizens and Indians living in Mexico; to explore unknown territory and furnish escorts to surveying-parties for scientific purposes and for projected railroads; to assist and guard the railways already built and other commercial lines of travel; to aid in the enforcement of the civil law in remote places; and to do generally all that is constantly required of our Army in the way of helping and urging forward everything which tends to develop and increase civilization upon the border, and at the same time to protect the Indians in the rights and immunities guaranteed them under existing treaties, has been the work of the troops in this military division for the past year, and that work has been successfully accomplished.

The effective military forces within the division—a detailed account of which will be found in the roster appended, marked A—consist of eight regiments of cavalry and seventeen regiments of infantry, aggregating 16,459 officers and enlisted men, who are distributed as follows: In the Department of Dakota, cavalry, 1,126; infantry, 3,022; in the Department of the Platte, cavalry, 1,502; infantry, 2,704; in the Department of the Missouri, cavalry, 1,558; infantry, 1,564; and in the Department of Texas, cavalry, 2,491; infantry, 2,492. This force is divided among 70 military posts, which cover the frontier from Montana on the north to the mouth of the Rio Grande on the south.

During the past year there has been only one change among the department commanders. Maj. Gen. Winfield S. Hancock was relieved from the command of the Department of Dakota on the 3d of December, 1872, by direction of the War Department, and assigned to the command of the military division of the Atlantic, and Brig. Gen. A. H. Terry was assigned to duty in his place.

Early last spring, in consequence of repeated attacks by the Indians on the post of Fort Abraham Lincoln, I deemed it necessary that a regiment of cavalry should be transferred to the Department of Dakota, in order that these Indians might be followed and punished, if they again renewed their attacks. On application to headquarters of the Army, the Seventh Cavalry was ordered from the Military Division of the South to the Department of Dakota, and, by direction of Gen. A. H. Terry, stationed at Forts Rice and Abraham Lincoln. This transfer was very fortunate, as it afterwards transpired that the authorities of the Northern Pacific Railroad desired to continue their surveys, and also that it had been determined by the Government to locate the northern boundary line, and the services of mounted troops became absolutely necessary for these purposes. As soon as the directors of the Northern Pacific Railroad had definitely settled upon their plan of operations for the summer, I deemed it necessary that some point upon the Yellowstone should be found near which to establish a depot for supplies, and by an agreement with Captain Coulson, agent of the contractor for Government transportation on the Missouri River for 1873, to furnish a steamboat to go from Fort Buford up the Yellowstone River, I sent Maj. George A. Forsyth, of my staff, to ascend that river, if possible,

Digitized by Google

and fix upon some point near the mouth of the Powder River for this depot. This trip up the Yellowstone was successfully made as far as that point, and a convenient place found for a supply depot, in case one was required. Further explorations have also established the fact that the Yellowstone is navigable for light-draught boats for a considerable distance above the mouth of Powder River, and it is thought that boats can now be run up nearly or quite to the mouth of Big Horn River. Upon the completion of this duty, Major Forsyth returned to Fort Rice, where the expedition was being organized for the protection of the surveying parties of the Northern Pacific Railroad; and, upon his report, Brig. Gen. A. H. Terry, commanding the Department of Dakota, ordered the establishment of a depot of supplies for the Yellowstone expedition at or near Glendive Creek, where it empties into the Yellowstone, the point at which it was assumed that the surveying parties of the Northern Pacific Railroad would run their line across the river.

This expedition, under command of Col. David S. Stanley, Twenty-second Infantry, left Forts Rice and Abraham Lincoln on the 16th of June, returning to its point of departure on the 21st of September, and succeeded in accomplishing the purposes for which it was intended, for the details of which reference is made to the reports of Brig. Gen. A. H. Terry and the sub-reports of Col. D. S. Stanley and Lieut. Cols. George A. Custer and Luther P. Bradley.

The survey of the northern boundary line has been progressing satisfactorily to all concerned throughout the summer, and the troops are now en route for their winter-quarters at Fort Totten, Dak.

In the Department of the Platte, the troops were increased by the transfer of the Fourth Infantry from the Military Division of the South. In this department all of the troops have been kept actively employed in covering the advanced settlements in Nebraska, in Western Kansas along the line of the North Fork of the Republican River, in Wyoming Territory between Forts Fetterman and Laramie, and along the line of the Union Pacific Railroad. For a detailed account of the operations in this department, I respectfully refer to the accompanying reports of Brig. Gen. E. O. C. Ord and his subordinates.

Nothing of unusual interest has occurred in the Department of the Missouri. The troops have been kept actively employed in the field for the purpose of intimidating roving bands of Indians, who might be tempted to commit depredations upon settlers and interrupt lines of travel. Brig. Gen. John Pope, in his report, gives a clear and comprehensive statement of his year's work, to which reference is respectfully made.

In the Department of Texas there has been a great deal of trouble along the northern line of the State, and also along the line of the Rio Grande. The troubles on the northern frontier of Texas have been principally from Indians coming from the reservations in the Indian Territory; and I respectfully request that some definite authority be given me to punish these raiding parties of Indians upon their return to their reservations. I believe it is the only way in which the evil can be cured.

The people living along the line of the Rio Grande have been heretofore frequently plundered by raiding parties of Indians and Mexicans from Mexico. I am happy to state that these depredations have diminished very materially since the punishment administered by Col. Ranald S. Mackenzie, Fourth Cavalry, upon a raiding band of Kickapoo and Lipan Indians. For the details of Colonel Mackenzie's attack on the Lipans and Kickapoos, as well as for a very complete statement of

Digitized by Google

military affairs in Texas, I respectfully refer to the accompanying reports of Brig. Gen. C. C. Augur.

It has been found necessary to make extensive repairs at many of the posts within this division during the year, but only one new post, the cavalry barracks near Fort Abraham Lincoln, has been erected. Considerable money has also been expended in the completion of the posts at Beaver City, Utah, and at Fort Clarke, Tex. In this connection I beg leave to call the attention of the General of the Army to the fact that, while the troops within this division will be quite comfortably quartered during the winter, they will be inconveniently crowded at some of the posts within the Departments of Dakota and of the Platte. Provision will have to be made for thorough repairs at Forts Laramie, Wyo., McPherson, Nebr., and Camp Douglas, Utah, during the ensuing summer.

The necessity of keeping Indians on their reservations is becoming more apparent every day, with the westward growth of the settlements and the rapid progress and development of the mining and cattle grazing interests in the State of Nebraska and the Territories of Wyoming and Colorado. During the last twelve months, depredations by roving bands of Indians, who, as a general thing, come from some one of the various Indian reservations within the limits of this command, have been exasperatingly frequent. They have attacked our posts, killed and wounded our citizens and carried off their cattle, and, when pursued by our troops, taken refuge within the line of their reservations and coolly boasted of their atrocities. It seems to me that a rigid rule should be made, forbidding their absence from their reservations, and in case they disregarded it, authority should be given the military to follow on the reservation, search out, capture and punish all whom it can be shown have been absent from their agencies, and off the reservations.

I respectfully recommend the erection of a large military post near the base of the Black Hills, at some good point to be selected hereafter. In this way we could secure a strong foothold in the heart of the Sioux country, and thereby exercise a controlling influence over these warlike people.

My thanks are due to Generals Pope, Terry, Ord, and Augur, who command the four Departments of this Military Division, for an intelligent administration of their commands, and for the exercise of a rigid economy in their estimates for, and expenditures of, public funds during the last fiscal year.

I am, colonel, very respectfully, your obedient servant,

P. H. SHERIDAN,
Lieutenant-General Commanding.

Col. WILLIAM D. WHIPPLE,
Asst. Adjt. Gen., U. S. A., Washington, D. C.

REPORT OF BVT. MAJ. GEN. JOHN POPE.

HEADQUARTERS DEPARTMENT OF THE MISSOURI,
Fort Leavenworth, Kans., October 6, 1873.

COLONEL: I have the honor to submit the following report of affairs in this department for the past year:

I am glad to be able to say that, with very trifling exceptions, I have no difficulties nor troubles with Indians anywhere in the department to report. The exceptions are: 1st, the murder of three surveyors, by a

Digitized by Google

party of Cheyennes, on the Cimmarron River, in March last. The point where these murders were committed was beyond the limits of this department, but I deemed it necessary, in view of the fact that the scene of the trouble was nearer and more accessible to this place than to the headquarters department of Texas, to take immediate measures to prevent any further occurrence of that kind, and I accordingly placed two companies of the Sixth Cavalry at a point southwest of Wichita, on the Arkansas River, to scout continually the southern line of Kansas as far as the Cimmarron, and three companies of the same regiment at Fort Dodge—one company of which was directed to scout the country south and southeast from the post. Since then no trouble with Indians of any kind has occurred in that region.

2d. The usual small troubles (much more trifling in character and fewer in number) have occurred in the southern part of New Mexico with the Apaches on the reservations of Tulerosa and Fort Stanton, but by the active operations and judicious management of Major Price, Eighth Cavalry, who has general command in Southern New Mexico, and who has been continually moving about through that country with four, and at times five, companies of his regiment, difficulties and depredations have been kept within very narrow limits, and have now almost altogether ceased.

The policy in the department has been rather to prevent than try to punish Indian depredations, by adopting early in the spring, and maintaining until winter set in, such precautionary measures as seemed most efficient, and the results have been eminently satisfactory, and are plainly manifest in the undisturbed condition of the department and in the entire absence of alarm or uneasiness on the part of the frontier settlers, who have ceased entirely to feel alarmed themselves or to alarm other people. Instead of keeping the troops at the military posts, only to be sent out on receipt of news of Indian depredations, the entire cavalry force has been kept in the field since the early spring, moving about from place to place, a few miles every day, without special object in their marches, except water and grass for animals. Instead of permitting the Indians to wander about, as has been their custom, all through the summer, to commit depredations whenever the opportunity offered, the troops have themselves been kept on the march, so that the Indians could not know where they were or at what moment or when they might come in contact with them. In this manner the necessity of watching has been thrown upon the Indians and not, as hitherto, upon the troops shut up at the posts for a large part of the season, and the result has been that the Indians have been very cautious and have in the main kept very close to the region assigned them as reservations.

The greatest danger now in this department arises from what seems to me the unfortunate practice of granting permission to Indians, of whatever tribe, to leave their reservations, and on pretext of hunting or really for that purpose, to roam in considerable bands all through the frontier settlements of Kansas and Colorado. I do not consider such a practice just to the white settlers, and it is certainly unsafe both to them and to the Indians.

I dwelt at such length on this subject in my last report that I deem it unnecessary to discuss it here, more especially as I know that the division commander entertains the same opinion as I do on the subject and is as fully acquainted with the reasons.

There was at one time uneasiness about those bands of the Utes, upon whose reservations white men, miners, and prospectors had largely intruded, but no outbreak has occurred, and I presume such arrange-

Digitized by Google

ments have now been made as will render any difficulty with those Indians unlikely.

I deem it unnecessary to enter into any consideration of the question of shelter for troops or the repair of posts now occupied by them, as such matters have been fully represented in regular correspondence concerning them.

It is proper, however, to state, as the result of actual experience, that a yearly sum ought to be appropriated to keep the military posts in repair. It is not to be supposed that such frail structures as are always built for the accommodation of the military forces of the United States doing duty on the remote frontier, (except the ordnance corps,) can be kept in repair without the expenditure of a considerable sum annually, nor does it seem the best or most efficient way of doing this to forward estimates to Washington for the smallest details of such matters. It certainly would seem better to assign a certain sum annually for repairs of all important permanent posts, so that these posts at least might be always kept in good order. The hardships and hard work which troops on the frontier must endure, and do, and which they cheerfully undergo, certainly entitles them to habitable quarters during the severe winters of this region, and whatever expenditure of money is necessary to secure this for them ought, if possible, to be made both for the sake of justice and of good policy.

I trust, therefore, that some provision will be made, however small, to assign at the beginning of every fiscal year a fixed sum, to be determined in any manner which may seem most suitable, to keep in repair all the posts in each military department in the gross or for each post separately, so that the trifling work which needs to be done nearly every day may be done when the necessity arises, and without waiting the long delay of sending to and receiving back from Washington small estimates for such purposes.

The sums thus required would be enough if furnished at the time, but are quite insufficient after a delay of two or three months.

It is my agreeable duty to bear testimony to the very efficient and judicious action of Major Price, Eighth Cavalry, in his dealings with the Indians in the southern part of New Mexico, as also of Major Alexander, Eighth Cavalry, commanding in the Ute country. Both these officers have been very active and very successful in keeping peace and in protecting the frontiers.

Lieut. Col. J. R. Brooke, Third Infantry, commanding Camp Supply, and Maj. R. I. Dodge, Third Infantry, commanding Fort Dodge, are entitled to the same justice at my hands.

The camp of the Sixth Cavalry near Fort Hays, under command of Col. James Oakes of that regiment, has also fully satisfied the objects for which cavalry was stationed in that region.

Orders will be sent in a few days to withdraw all the troops in the field to winter-quarters at the posts from which they were detached, and by November 10 it is expected that the execution of the orders will be completed.

After that date there is little, if any, fear that Indians will be found on the great plains.

We have been subjected to much inconvenience and some embarrassment by the absence of so many field officers from their regiments, and it is hoped that some of those now on detached service may be ordered to rejoin their regiments at the earliest convenient time.

Concerning the administration of the department in its various details, I refer to the reports of the chiefs of the staff departments inclosed,

Digitized by Google

and in relation to the same matters, I ask attention to the recommendations made in my previous reports, which are again commended to the consideration of the proper authorities.

It is, perhaps, not improper for me to specify two subjects which seem to me to be worthy of attention:

1st. Concerning the recruiting service and the detail of officers for that duty. The tour of duty of officers assigned to recruiting service begins and ends on the 1st of January, the tour of such officers lasting two years. I suggest that the time of reporting for and being relieved from such duty be fixed at May 1 or July 1, instead of January 1. Officers detached for recruiting service from remote posts, far from railroads, and ordered to report January 1, in the depth of winter, find it, in many cases, impracticable or exceedingly difficult, without much suffering, to obey the order, unless, indeed, they leave their posts several months earlier than would be necessary to make the journey, and officers relieved from recruiting duty on the 1st of January, in like manner, find it, at times, absolutely impracticable in many cases to join their proper stations at that season of the year, and are therefore obliged either to ask leave of absence or delay in obeying the order, until the season is suitable to travel to remote posts. In this manner many officers are kept away from duty at their posts for several months, when, by fixing the time of joining recruiting stations, or being relieved from that duty, at May 1 or July 1, no such necessity would arise. I do not know what are the reasons for preferring the 1st of January for beginning and terminating recruiting-service details, but, unless they are very important, the interests of the service on the frontier would be greatly benefited by the suggested change.

2d. It would be greatly to the advantage of the Army on the frontier if the annual appropriations for building and repairing shelter for the troops could be made available on the 1st of February of each year instead of the 1st of July. It has not seemed practicable to distribute the sums approved on requisitions for the posts on the frontier so that they can reach such posts before the autumn, generally too late in the season to be applied to building before the following spring. By having the money assigned for such purposes early in the spring, the whole season in which building or repairing can be best done, would be available for the purpose, and the troops need not, as is now the case, suffer more or less all winter because of the impracticability of using the funds actually allowed during that season of the year. Whether this change can be made, or whether it be judicious to make it, must be left to higher authority, and I simply offer the suggestion for consideration.

I would also suggest the advisability of retransferring to this department that portion of the Indian country between the southern line of Kansas and the Canadian River, including Fort Gibson. I think the division commander agrees with me that the defensive arrangements of this department require that the department commander should have jurisdiction over that region.

The various staff departments have been conducted with efficiency and good judgment, as I think the results show.

We are rapidly acquiring thorough knowledge of all the country embraced in the limits of the department, and most excellent maps, through the various scouting parties, in each of which an officer or an engineer soldier has made careful surveys and sketches under detailed instructions from department headquarters.

Digitized by Google

I transmit inclosed a roster of the department and a field return of the troops serving in it.

I am, colonel, respectfully, your obedient servant,

JNO. POPE,
B'v't Maj. Gen., U. S. A., Commanding.

Official:
R. WILLIAMS,
Assistant Adjutant-General.
Lieut. Col. J. B. FRY, *Asst. Adjt. Gen.*,
Headquarters Military Division of the Missouri.

NOTE.—Since the above report was written, a party of two hundred Cheyennes left their reservation south of Camp Supply, and passing far to the west of all the posts entered the southern part of Colorado west of Fort Lyon, and went up as far as the Kansas Pacific Railroad at River Bend. The Indians were not hostile, and beyond stealing some cooking utensils and killing a few cattle they did no damage. Finding that their presence excited such immediate attention from the citizens as well as the troops, they hastened back toward their reservation.

Full report of the matter having been made to the division commander so recently, it seems unnecessary to enter into details here. As the Indians belonging to this party are individually known they can be arrested and punished at any time on their reservation. They have not committed any acts demanding such condign capital punishment as (I see from the papers) the Secretary of the Interior recommends; nor have they done anything that is not done every year by some of the reservation Indians, against the perpetrators of which severe measures have been discountenanced, not to say denounced. Only in February last a party of Cheyennes, some of whom were without doubt the same Indians who were on the late expedition into Colorado, went up the Canadian River from their reservation with the same purpose, (viz, to fight the Utes,) and in returning began to depredate on the settlements near Bascom. They were attacked by troops from that post and several killed. This act, which seems to be recommended in the present case, when it is too late for execution, was the occasion of remonstrance by the Interior Department, and a manifest intention was shown to throw the blame of any further depredations by the Cheyennes upon the military who did it. If the Interior Department really wishes the Cheyennes recently in Colorado punished, they have only to consent to their arrest when they get back to their reservation. I can easily and promptly do this and save unnecessary bloodshed among innocent people.

REPORT OF MAJ. GEN. IRWIN McDOWELL.

HEADQUARTERS DIVISION OF THE SOUTH,
Louisville, Ky., October 6, 1873.

SIR: I have the honor to submit to the General of the Army the following report of the military operations and the military service in this division (reconstituted December 11, 1872, and consisting of the Departments of the South and the Gulf) for the year commencing October 1, 1872:

Digitized by Google

DEPARTMENT OF THE SOUTH.

October 1, 1872.—The posts of Lincolnton and Rutherfordton, N. C., were discontinued, and Company C, Seventh Cavalry, was ordered from Lincolnton to Charlotte, N. C., and Company C, Fourth Artillery, was ordered from Rutherfordton to Raleigh, N. C., where it arrived October 17, 1872.

October 16, 1872.—Company H, Seventh Cavalry, was sent from Nashville, Tenn., to Livingstone, Sumter County, Ala., to protect citizens at the election, and returned November 10, 1872.

October 21, 1872.—Company E, Eighteenth Infantry, sent from Atlanta, Ga., to Seales Station, Russell County, Ala., and ordered back November 8, 1872. One commissioned officer and twenty-five men, Company A, Seventh Cavalry, were ordered from Elizabethtown, Ky., to report to United States marshal. One commissioned officer and fifteen men of Company H, Seventh Cavalry, detached from Livingstone, Sumter County, to Carrollton, Pickens County, Ala., ordered back November 10, 1872.

October 22, 1872.—Company B, Second Infantry, was sent from Atlanta, Ga., to Demopolis, Marengo County, Ala., and Company I, Second Infantry, was sent from Chattanooga, Tenn, to Eutaw, Greene County, Ala. Both returned to their posts November 10, 1872. One commissioned officer and twelve enlisted men of Company A, Eighteenth Infantry, were ordered from Atlanta, Ga., to Macon, Ga., at request of the United States marshal, and ordered back November 10, 1872.

October 29, 1872.—Company E, Third Artillery, was ordered from Fort Pulaski to Savannah, Ga., during the election.

November 1, 1872.—One officer and ten men were placed en route for each of the following places in Alabama from Chattanooga, Tenn.: Abbeville, Henry County, Second Lieut. A. McIntyre, Second Infantry. Columbia, Henry County, First Lieut. J. Ulis, Second Infantry. Ordered back November 10, 1872.

One officer and ten men placed en route for each of the following places in Alabama, from Nashville, Tenn.; Ozark, Dale County; Greenville, Butler County; Rutledge, Crenshaw County; Troy, Pike County. Ordered back November 10, 1872.

November 6, 1872.—Headquarters, and Light Battery C, Third Artillery, were placed en route for New York City, in compliance with General Orders No. 88, War Department, Adjutant-General's Office, of 1872.

November 12, 1872.—Light Battery K, First Artillery, arrived in the department from the Department of the East, in compliance with General Orders No. 88, War Department, Adjutant-General's Office, of 1872, and took post at Charleston, S. C.

November 15, 1872.—Headquarters, staff, band, and Company H, First Artillery, arrived in the department pursuant to General Orders No. 88, War Department, Adjutant-General's Office, of 1872, and took post at Charleston, S. C., relieving Company I, Third Artillery, which was placed en route for the Department of the East.

November 17, 1872.—Company D, First Artillery, arrived in the department from the Department of the East pursuant to General Orders No. 88, War Department, Adjutant-General's Office, of 1872, and took post at Savannah, Ga., relieving Company K, Third Artillery, which was placed en route for the Department of the East.

November 20, 1872.—Maj. John Hamilton and Companies B and C, First Artillery, arrived at Fort Pulaski, Georgia, from the Department

Digitized by Google

of the East, relieving Companies E and H, Third Artillery, which were placed en route for New York City, in compliance with General Orders No. 88, War Department, Adjutant-General's Office, of 1872.

November 22, 1872.—Maj. J. C. Tidball and Companies F and I, Second Artillery, arrived at Raleigh, N. C., from the Division of the Pacific.

November 30, 1872.—Captain Weir and thirty enlisted men of Company D, Seventh Cavalry, were placed en route for Montgomery, Ala., on the request of the governor of Alabama, based on the representations of the sheriff of Montgomery County.

December 5, 1872.—Company K, Sixteenth Infantry, was relieved from duty at Saint Augustine, Fla., and ordered to Frankfort, Ky. Company I, Seventh Cavalry, was relieved from duty at Shelbyville, and ordered to Lebanon, Ky.

December 6, 1872.—Company L, Seventh Cavalry, was relieved from duty at Yorkville, S. C., and ordered to Shreveport, La., (Department of the Gulf,) and Company M, Seventh Cavalry, was relieved from duty at Unionville, S. C., and ordered to Oxford, Miss., (Department of the Gulf,) by order of the General of the Army.

December 11, 1872.—I assumed command of the Division and Department of the South, relieving Brig. Gen. A. H. Terry from command of the latter, in compliance with General Order 100, War Department, Adjutant-General's Office, of 1872.

December 16, 1872.—Company A, Sixteenth Infantry, was sent from Louisville to Frankfort, Ky., pursuant to paragraph 4th, Special Order 310, War Department, Adjutant-General's Office, of 1872; the Fourth Infantry was placed en route for Little Rock, Ark., in the following order: 16th, Company H; 18th, Company F; 19th, Company I; 21st, Company D; 23d, Company A; 24th, Company E; 25th, Company B; 26th, Company C; January 7, 1873, Company K; January 14, 1873, Company G.

December 18, 1872.—Company L, Seventh Cavalry, placed en route for Shreveport, La., in compliance with paragraph 4, Special Order 310, War Department, Adjutant-General's Office of 1872.

December 23, 1872.—Company K, Sixteenth Infantry, was sent to Frankfort, Ky., from Saint Augustine, Fla.

December 25, 1872.—Company M, Seventh Cavalry, from Unionville, S. C., placed en route for Oxford, Miss., in compliance with Special Order 310, War Department, Adjutant-General's Office, of 1872.

December 26, 1872.—Company I, Second Infantry, was ordered from Chattanooga, Tenn., to Lancaster, Ky.

December 30, 1872.—Company I, Seventh Cavalry, abandoned the post of Shelbyville, and went to Lebanon, Ky.

January 6, 1873.—One officer and twenty men of Company F, Seventh Cavalry, from Taylor Barracks, Ky., placed en route for Livingstone, Rockcastle County, Ky., to assist United States marshal in serving process of United States court.

January 17, 1873.—The post of Laurensville, S. C., ordered abandoned, and Company I, Eighteenth Infantry, ordered to Columbia, S. C., where it arrived January 26, 1873. Company G, Seventh Cavalry, ordered to Newberry, S. C., and arrived there January 23, 1873.

January 21, 1873.—The post of Chester, S. C., ordered abandoned, and Company H, Eighteenth Infantry, placed en route for Columbia, S. C. Detachment of cavalry sent to Yorkville, S. C., and arrived January 29, 1873.

January 26, 1873.—Detachment of Company A, Seventh Cavalry, ordered back to Elizabethtown, Ky., from Huntsville, Ala.

January 29, 1873.—At the request of United States Marshal Murray,

Digitized by Google

Company A, Sixteenth Infantry, was sent to Lexington, Ky., from Frankfort, Ky., and ordered back February 7, 1873.

February 3, 1873.—Headquarters and band, Fourth Infantry, left Frankfort, Ky., for Little Rock, Ark.

February 15, 1873.—Commanding officer post of Atlanta, Ga., was directed to place one officer and twenty men en route for Moultrie, Colquitt County, Ga., at request of United States Marshal Smyth, of Georgia. They returned to Atlanta, Ga., April 16, 1873.

February 17, 1873.—Company D, Seventh Cavalry, was ordered from Opelika to Livingstone, Sumter County, Ala., by direction of the President.

March 3, 1873.—Company A, Sixteenth Infantry, was placed en route for Lebanon, Ky,

March 13, 1873.—Company D, Seventh Cavalry, arrived at Memphis, Tenn., from Livingstone, Ala.

March 15, 1873.—Company E, Seventh Cavalry, arrived at Memphis, Tenn., from Unionville, S. C.

March 17, 1873.—Company K, Seventh Cavalry, arrived at Memphis, Tenn., from Yorkville, S. C.

March 18, 1873.—Company M, Seventh Cavalry, arrived at Memphis, Tenn., from Oxford, Miss.

March 20, 1873.—Company C, Seventh Cavalry, arrived at Memphis, Tenn., from Charlotte, N. C. Company B, Seventh Cavalry, arrived at Memphis, Tenn., from Spartanburg, S. C.

April 2, 1873.—Headquarters, staff, band, and Companies A, F, H, and I, Seventh Cavalry, left Louisville, Ky., en route for Department of Dakota.

April 3, 1873.—Companies G and D, Seventh Cavalry, left Memphis, Tenn., for Department of Dakota.

April 4, 1873.—Companies E and K, Seventh Cavalry, left Memphis, Tenn., for Department of Dakota.

April 5, 1873.—Companies B, C, L, and M, Seventh Calvary, left Memphis, Tenn., for Department of Dakota.

May 20, 1873.—The post of Spartanburg, S. C., ordered abandoned, and garrison (Company D, Second Infantry) sent to Atlanta, Ga., June 2, 1873, arrived June 7, 1873.

June 11, 1873.—The post of Taylor Barracks, Louisville, Ky., abandoned, Company E, Sixteenth Infantry, placed en route for Lancaster, Ky., to relieve Company I, Second Infantry, the latter, when relieved, to proceed to Atlanta, Ga. Garrison at Nashville was temporarily removed to White Creek Springs on account of cholera.

July 10, 1873.—Charleston Arsenal, S. C., was ordered discontinued, and the arsenal (to be hereafter known as Charleston Barracks) to form part of the post of Charleston.

August 19, 1873.—The post of Sumter, S. C., ordered to be abandoned and Company F, Eighteenth Infantry, to proceed to and take station at Columbia, S. C.

September 4, 1873.—The post of Charlotte, N. C., discontinued, and Company D, Second Artillery, ordered to take post at Charleston Barracks, S. C.

September 20, 1873.—The garrison of Mobile, Ala., headquarters, staff, band, and Companies G and K, Second Infantry, temporarily moved to Mount Vernon, Ala., in consequence of yellow fever. The movements of troops in this department were made in aid of the United States civil officers, to enforce the processes of the United States courts, and collect the internal revenue. In all cases the troops fulfilled the duty on which

Digitized by Google

they were sent. Soon after assuming command of the division I made an inspection of all the posts in this department, and in the interests of discipline, military instruction, and economy, abandoned such of them as the nature of the public service permitted, and concentrated the troops, as far as practicable, at such points as enabled them to be maintained at the least cost and greatest comfort. Fourteen of the military posts of the department were thus abandoned, at an annual saving of over $100,000 on account of the Quartermaster's Department alone. For the purpose of making a further reduction in expense, of avoiding the necessity of repairing old temporary quarters built on hired ground, and of exchanging an unhealthy for a healthy post, I made a special inspection in person in the month of August last of the late Mount Vernon Arsenal, Ala., (now directed to be called Mount Vernon Barracks,) with the view of preparing economical and judicious estimates of alterations necessary to convert, at an early day, bare workshops into quarters, and an arsenal into barracks, that I might send there the troops now at Mobile. I trust the War Department may soon be able to sanction the estimates for these alterations, and grant authority for sending in estimates for a hospital. The place (I cannot yet say the barracks) at Mount Vernon is now occupied by the garrison from Mobile, it having sought refuge there from the yellow fever now afflicting the South. The late Charleston Arsenal, hereafter to be called Charleston Barracks, is now occupied by a single company. I propose soon to inspect the post with the view of submitting estimates for such alterations as will enable me to place there two, or at least one more company, and thus further reduce the sum we are now paying for hire of quarters.

The deputy quartermaster-general attached to this department (whose report is herewith) states the United States to be indebted through the Quartermaster's Department, in the Department of the South, for the fiscal year ending June 30, 1873, as follows:

Incidental expenses	$12,529 29
Barracks and quarters	11,197 16
	23,726 45

He further states that as this amount was not for material furnished, but for personal services, it is the decision of the War Department that the creditors cannot be paid from the appropriations for this year, and must now look to Congress for relief.

The sum of $12,529.29, for what is known as "incidental expenses," is made up of small sums due to, mostly, poor people; $4,471.49 being to clerks authorized by the War Department; $683 to colored scavengers at five different posts; $1,881 to blacksmiths for shoeing the artillery, cavalry, and quartermasters' horses at eighteen different posts; $4,196 to soldiers at twenty-three posts for extra duty, pay allowed by law when on constant hard labor for more than ten days; $1,320 to persons at twelve posts for rewards, allowed by law, for apprehension of deserters.

The sum of $11,197.16 is mostly due for rent of buildings and grounds for barracks and quarters at twelve different posts—those still occupied—it having been thought best to pay in full at those which I caused to be abandoned. I am safe in saying that everything has been done to insure as little liability under these heads as possible; that, in fact, it would have been much greater but for the reduction I have made in the number of posts. I am assured, and believe, that the various post assistant and acting assistant quartermasters have been prompt in send-

Digitized by Google

ing in their estimates, and that these have been by the deputy quartermaster-general promptly sent to the Quartermaster-General's Office.

I have no question, also, that the funds were remitted to the extent the appropriation permitted, and were distributed as soon as possible. I only dwell on this subject because of the hardship I know it has caused many deserving people, and of the discredit it has brought on the service, and to show that the indebtedness is not due to any want of vigilance or fault on my part, or of those under me.

I send herewith the reports of the chiefs of the several staff departments at department headquarters of the operations under their charge during the part year.

DEPARTMENT OF THE GULF.

I submit herewith the report of Col. W. H. Emory, commanding the department, for an account of the movement of troops and the state of the service in his command.

The duty devolving on the officers and men and their commander in this department during the past year has been of the most delicate, important, and frequently embarrassing kind, and it gives me pleasure to state that it has been discharged with tact, fidelity, and, in all cases, with effect.

I have the honor to be, very respectfully, your most obedient servant,

IRWIN McDOWELL,
Maj. Gen. Commanding Division of the South.

The ASSISTANT ADJUTANT-GENERAL,
Headquarters of the Army, Washington, D. C.

REPORT OF MAJ. GEN. J. M. SCHOFIELD.

HEADQUARTERS MILITARY DIVISION OF THE PACIFIC,
San Francisco, Cal., November 3, 1873.

SIR: I have the honor to submit to the General of the Army the inclosed reports of operations in this military division during the past year.

The Division of the Pacific embraces the three Departments of Arizona, California, and the Columbia.

The Department of Arizona, commanded by Bvt. Maj. Gen. George Crook, lieutenant-colonel Twenty-third Infantry, since appointed brigadier general, has been the theater of active operations against hostile Indians—operations characterized by consummate skill displayed in the plans of the departmental commander, and by gallantry and untiring energy of the officers and men engaged. With few exceptions the lately-hostile Apaches have been forced to submit to authority, and are now living quietly upon the reservations assigned them.

Since the close of General Crook's campaign it has been found possible to diminish somewhat the cavalry force in that department, which had been increased to insure his success.

Increased development and security have diminished the cost of supplies for the troops.

The military telegraph to Prescott and Tucson, now nearly completed, beside its great military advantages, will facilitate commercial business and promote further development of the Territory.

Digitized by Google

The condition of Arizona is more hopeful than at any former period, and great credit is due for this improvement to the department commander and his subordinates.

I respectfully refer to General Crook's report and the accompanying documents for full and detailed information upon all matters connected with his command.

The Department of the Columbia has been the scene of a conflict more remarkable in some respects than any before known in American history. All the details of the Modoc war are so fully known to the Government and to the public, through reports heretofore made, that it would be superfluous to repeat them here.

The Department of the Columbia is now commanded by Bvt. Maj. Gen. Jefferson C. Davis, colonel Twenty-third Infantry, who succeeded to that command upon the death of the lamented General Canby.

General Davis's annual report has not yet been received at these headquarters.

The Department of California, under my immediate command, has enjoyed uninterrupted peace during the past year. Nearly all the troops, including the artillery, were engaged in the campaign against the Modocs, and some of them have since been employed in guarding the prisoners and in conducting them to their destination in the Department of the Platte.

The inclosure marked A gives the strength and distribution of the troops serving in the department.

The reports of the chiefs of staff departments, also inclosed, show the details of transactions in their separate departments.

Some changes in the stations of troops, rendered expedient by the progress of events, will hereafter be made the subject of special report, accompanied by estimates of the expenditures necessary to accomplish them.

Very respectfully, your obedient servant,

J. M. SCHOFIELD,
Major-General.

The ASSISTANT ADJUTANT-GENERAL,
Headquarters of the Army, Washington, D. C.

REPORT OF MAJ. GEN. W. S. HANCOCK.

HEADQUARTERS MILITARY DIVISION OF THE ATLANTIC,
New York City, September 30, 1873.

SIR: I have the honor to submit for the information of the General of the Army my annual report for the division.

I was assigned to that command and to that of the Department of the East by General Order No. 100, Headquarters of the Army, November 25, 1872, and pursuant to these orders assumed command December 16, 1872.

General Order No. 105, Headquarters of the Army, Adjutant-General's Office, December 7, 1872, transferred the headquarters of this division from Philadelphia, Pa., to New York City.

The organization of the division has not been changed since date of last annual report. Its aggregate in troops at date of last returns was as follows:

Department of the East, 178 officers; enlisted men, 1,531; Depart-

Digitized by Google

ment of the Lakes, 78 officers; enlisted men, 603; total, 256 officers, 2,134 enlisted men.

I refer to my inclosed report, as commander of the Department of the East, for a detailed statement of operations in that command during the past year, and also refer for a similar purpose to inclosed annual report of the commander of the Department of the Lakes.

The attention of the General of the Army is respectfully invited to the remarks and recommendations contained in the concluding portion of my report, as commander of the Department of the East, relative to the urgent necessity for a military prison in that command, and which might serve as well for Department of the Lakes, and concerning the erection of some new buildings at certain posts in New York Harbor.

Having recently visited and inspected all the posts in the Department of the Lakes, I am able to concur in the remarks and recommendations of the commanding general of that department.

In reference to the reservation at Fort Gratiot, I may add, in addition to my approval of the views expressed in his report, that I think it unfortunate that the ground between the fort and the inlet of the straits should have been ceded by Congress, and that with all the guards that may be thrown around the deed of cession, I believe, for military purposes, the value of the reservation has been much impaired. I think, also, it would be better that the part of the light-house reservation authorized to be sold should be reserved for military purposes, as since the obstruction of the old reservation caused by the grant to the railroad company, I am not sure that it might not be as well to make that the defensive point instead of the present position.

I submit herewith a list of the military reservations in this division, showing when and how the land was secured to the Government, and how occupied at this date.

Fort Mackinac is an excellent place for the cantonment of troops intended for service on the upper lakes. It has no other importance at this date, as it cannot be made to protect the straits on which it is situated.

Plattsburg Barracks may also be used for the quartering of troops, but can serve no other military purpose not provided for by Fort Montgomery.

Carlisle is only important as a cantonment.

David's Island might advantageously be made a cantonment for the troops intended to occupy the forts in the East River, when completed.

As all of the reservations named in the accompanying list, save Fort Wilkins, Copper Harbor, Lake Superior, (now abandoned, and not important to the military service,) are deemed to be useful, it would in my judgment be better to retain all, with that exception.

I inclose herewith reports of the chiefs of the several staff corps at these headquarters.

The assistant inspector-general, having been absent for some time on a tour of inspection, has not been able to furnish his annual report. It will be transmitted to your office as soon as practicable after his return to these headquarters.

I am, sir, very respectfully, your obedient servant,

WINF'D S. HANCOCK,
Maj. Gen., U. S. A., Commanding.

The ASSISTANT ADJUTANT-GENERAL,
Headquarters of the Army, Washington, D. C.

WAR DEPARTMENT,
Adjutant-General's Office, October 7, 1873.

SIR: My report of October 7, 1872, referred to the *re-established* business of the late Bureau of Refugees, Freedmen, and Abandoned Lands, and recited the regulations for conducting it. The said regulations have proved well adapted to their object, and the results obtained are, in a high degree, satisfactory.

In addition to the disbursing offices established under War Department General Orders No. 79, of 1872, it has been found expedient to establish others: At Fort Monroe, Virginia; Forts Macon and Johnston, North Carolina; Charleston, South Carolina; and Savannah, Georgia, for the payments to claimants residing at and near to those points, thereby enabling them to receive the amounts due them, with comparatively little expense to themselves and a considerable saving to the Government.

For the thirteen offices now open, the force employed is, 13 co mmissioned officers, 30 clerks, and 10 messengers and janitors.

The officers in charge of the offices at Forts Monroe, Macon, and Johnston, Charleston, and Savannah, attend to their ordinary post and company duties in addition.

The *discovery* of claimants who, since filing their claims, have changed their places of residence, many of them to other States, has, in many instances, proved extremely difficult, but through diligent effort on the part of the disbursing officers, who have availed themselves of all practicable means to attain that end, they have succeeded in ascertaining the whereabouts of a considerable number, and in securing to them the amounts awarded in settlement of their claims.

It was also ascertained that numerous claimants were living at points remote from either of the established paying districts, and that to secure payment to them through any one of the disbursing officers would be impossible, without entailing expenses largely disproportionate to the amounts involved. A plan was therefore submitted which led to an arrangement, by the Secretary of War with the Postmaster-General, for the payment of such claimants through the postmaster at or nearest to their respective places of residence. A number have already been paid in this way, and the system is found to work favorably. As a further aid to the "discovery of the claimants," a circular letter, copy herewith, A, dated March 18, 1873, was sent to certain Senators and Representatives. Resort was also had to advertising.

Early in the month of December, 1872, it was discovered that claims borne upon the records of the late Bureau of Refugees, Freedmen, and Abandoned Lands as *paid,* were, in fact, unpaid, while others borne as *unpaid* had actually been paid. It therefore became necessary to at once subject said records to a careful examination and comparison with those of the accounting officers of the Treasury, in order that all necessary emendations might be made and the work of payment be safely proceeded with. This labor occupied about one month, during which period all payments were necessarily suspended. Until the discovery of the errors referred to, the disbursing officer stood in constant danger of making duplicate payments, or of rejecting just claims.

By the act of March 3, 1873, entitled "An act to place colored persons who enlisted in the Army on the same footing as other soldiers as to bounty and pension," a very large number of colored ex-soldiers have become entitled to bounty, of which they had hitherto been deprived by reason of their having been "slaves" April 19, 1861. Claims under said act are filing in the Office of the Second Auditor of the Treasury, and a few certificates in settlement have already been received at this

Digitized by Google

office. When such claims come, as they undoubtedly will, to be numerously settled, the labors of this office will, of course, be proportionately enlarged.

The missing and defective records of the late Bureau have, to a limited extent, been supplied by the late Commissioner, eighteen packages, containing records of various descriptions, including books of "Letters received," "Letters sent," and "Indorsements," "Bounty registers," files of letters, claims, soldiers' discharges, &c., having been received. The bulk, however, of those indicated to the late Commissioner by letter of January 18, 1873, has not been produced.

The discontinuance, under the circular of August 8, 1872, of the *prosecution* of claims for bounties or other moneys due to colored soldiers and others, has resulted favorably to the Government by a large saving of expenses.

Correspondence has been had with the late Commissioner from time to time, relative to subjects involved in his administration of the late Bureau.

I respectfully submit, as a part of this communication, my reports dated February 20, 1873, August 4, 1873, and September 23, 1873, (now before the War Department,) which relate, respectively, to the condition of the affairs of the late Bureau, and the responsibility and accountability of the late Commissioner.

The tabular exhibits herewith, submitted by the chief disbursing officer, will indicate the financial operations during the fiscal year ending June 30, 1873, and to August 31, 1873.

Very respectfully, general, your obedient servant,

THOMAS M. VINCENT,
Assistant Adjutant-General.

The ADJUTANT-GENERAL OF THE ARMY,
Washington, D. C.

Approved and respectfully submitted to the Secretary of War.

E. D. TOWNSEND,
Adjutant-General.

(A.)

WAR DEPARTMENT, ADJUTANT-GENERAL'S OFFICE,
Washington, March 18, 1873.

[To Senators and Representatives from States wherein claimants were believed to be.]

SIR: I have the honor to inform you that all colored soldiers or sailors, or their legal representatives, who have received notice from the Treasury Department that certificates have been issued in settlement of their claims for pay, bounty, prize-money, &c., and who have not received the amounts due them, can now be paid promptly, without further expense to claimants, so soon as this Office shall have learned the post-office address.

Therefore, I respectfully request that you will inform claimants within your reach, and request them to send their names, with post-office address, and the designation of the company and regiment in which the service was rendered, to the Adjutant-General United States Army, Washington, D. C.

It should be distinctly understood that a claimant need not send his or her name, &c., unless he or she shall have been notified from the Treasury Department that a certificate in his or her favor has been issued, this Office not having to do with cases prior to that action.

Your aid in the matter, as indicated, will not only benefit the colored claimants, but prove advantageous to the public service.

Very respectfully, your obedient servant,

E. D. TOWNSEND,
Adjutant-General.

WAR DEPARTMENT, ADJUTANT-GENERAL'S OFFICE,
CHIEF DISBURSING OFFICE, FREEDMEN'S BRANCH,
Washington, D. C., October 7, 1873.

MAJOR: I have the honor to submit herewith tabular exhibits of the financial operations of the disbursing office of the freedman's branch of the Adjutant-General's Office in the payment of pay, bounty, prize-money, and other moneys due to colored soldiers, sailors, &c., under joint resolution of March 29, 1867, for the fiscal year ending June 30, 1873, and embodying also a separate exhibit of the like operations from July 1 to August 31, 1873.

Of the amount ($100,000) appropriated by Congress to defray the expenses attending the payment of bounties, &c., for the year ending June 30, 1873, there has been expended the sum of $58,450.06, leaving an unexpended balance of $41,549.94.

Much attention has been given to the systematizing of the general work, and under the system, as now perfected, all settled claims can be paid without any delay, other than that preceding the discovery and identification of the claimants.

Very respectfully, your obedient servant,

JAMES McMILLAN,
Capt. Third Artillery, Chief Disbursing Officer.

Maj. THOMAS M. VINCENT,
Assistant Adjutant-General.

Abstract of receipts and disbursements for the fiscal year ending June 30, 1873—Continued.

RECAPITULATION.

On what account.	Fiscal year ending June 30, 1873.		July and August, 1873.	
	Received.	Disbursed.	Received.	Disbursed.
Pay, bounty, &c., due colored soldiers	$1,146,532 65	$422,759 16	$725,340 80	$66,813 35
Pay, bounty, &c., due colored sailors	6,267 05	1,434 69	4,953 28	27 08
Commutation of rations due colored soldiers	676 50	34 50	642 00	.....
On hand and in transit	.....	424,228 28	.....	66,840 43
	.....	729,247 92	.....	664,095 65
	1,153,476 20	1,153,476 20	730,936 08	730,936 08

* This includes the amount on hand July 1, 1873.

Remarks.—Two thousand two hundred and seventy-one claims were paid during the fiscal year ending June 30, 1873, and 335 during July and August, 1873, making a total of 2,607. The amounts in the hands of the local disbursing officers, aggregating $559,973.32, represent 3,277 settled claims that have been adjusted at the chief disbursing office in this city for payment to the claimants, and sent to the local officers for that purpose. The payment of these claims involves no labor further than that of identifying the claimants when they shall present themselves.

I hereby certify that the above is correct.

JAS. McMILLAN,
Capt. Third Artillery, Chief Disbursing Officer.

CHIEF DISBURSING OFFICE,
Freedmen's Branch, Adjutant-General's Office, Washington, D. C., October 7, 1873.

Report of the recruiting service from October 1, 1872, *to October* 1, 1873.

WAR DEPARTMENT, ADJUTANT-GENERAL'S OFFICE,
Washington, October 14, 1873.

Recruiting for cavalry, artillery, and infantry has been carried on during the past year in the principal northern and western, and in a few of the southern cities. Owing, however, to the limited sums appropriated for this service for the last fiscal year, several rendezvous which might have been maintained in small towns as branches to those located in the large cities have been discontinued. On the same account it was found necessary to diminish the number of enlistments by raising the standard of height for artillery and infantry recruits, in order to keep down the expenses of the recruiting service. From this cause the regiments became reduced in number at the very season for active operations, and the Department had not the means to strengthen them.

The appropriation for the present year, reduced upon the original estimate made by this Office, will towards the close of the year again run short. Meantime, however, every effort will be made to fill the regiments to the standard allowed.

Two rendezvous for organizations on the Pacific coast are maintained under the supervision of the commanding general, Military Division of the Pacific, but the number of men there enlisted is insufficient to keep up the strength of the organizations in that section of the country.

There is a rendezvous for the Corps of Engineers in New York City, under charge of an officer of that corps.

With the exception of those stationed on the Pacific coast, and those recruiting for the Battalion of Engineers, all recruiting officers enlist for the colored regiments.

A few officers located in cities where there are stations for the signal-service also enlist men for that arm of the service.

E. D. TOWNSEND,
Adjutant-General.

Statement showing the number of enlistments and re-enlistments in the Regular Army from October 1, 1872, *to October* 1, 1873; *compiled from reprots forwarded to this Office by superintendents of the recruiting service, &c.*

REPORT

OF

THE INSPECTOR-GENERAL.

WAR DEPARTMENT, INSPECTOR-GENERAL'S OFFICE,
Washington, October 10, 1873.

SIR: The inspection service of the Army during the past year has been performed in conformity with the requirements of General Orders No. 87, series of 1872, the five inspectors-general having been exclusively subject to the orders of the Secretary of War and the General of the Army.

My own duties, for the most part, have been confined to the charge of the Inspector-General's Office, at the headquarters of the Army, receiving and examining inspection reports, and extracting therefrom all matters of interest to, or requiring action by, the Secretary of War, the General of the Army, and the heads of the different bureaus of the War Department; and it is believed that much important information has thus been communicated which would not otherwise have come to the knowledge of those officials.

Inspectors-General D. B. Sacket, E. Schriver, N. H. Davis, and J. A. Hardie, during the autumn of 1872 and the winter of 1872 and 1873, made careful and thorough inspections of the Department of the South, a part of the Department of Texas, the entire Department of the Missouri, and the Department of the Gulf.

Early in the spring of 1873 these officers, under orders from the Secretary of War, commenced the inspection of the Departments of Arizona, Texas, Dakota, and the Columbia, thoroughly examining into the condition of the *personnel* and *materiél* of the Army at all the remote and widely dispersed posts, stations, and depots within the limits of those departments—excepting Alaska—and embracing one hundred and seventeen military posts, garrisoned by eighteen regiments of infantry, seventeen companies of artillery, and eight regiments of cavalry. This laborious service involved many thousands of miles of wagon-travel, for the most part over unsettled sections of country infested by hostile savages, and occupied each officer from seven to nine months.

Besides this, other minor inspections and investigations have, from time to time, been made by these officers, thus occupying all their time, and involving voluminous reports, which have been made without the expenditure of a dollar for clerical assistance.

Inspector-General Hardie, at the request of the general commanding the Military Division of the Pacific, and by authority of the Secretary of War, previous to inspecting the Department of the Columbia, visited the headquarters of the expedition against the Modoc Indians, and made certain inspections and reports for the division commander.

In a letter from General Schofield to Colonel Hardie, dated April 21, 1873, is the following:

Digitized by Google

In order that the public service may derive the fullest benefit from your tour of inspection in the Department of the Columbia, I request that your inspections may be extended to all branches of the military service, so far as it can be done without interfering with the plans or wishes of the department commander; and that all errors, faults, or defects you may discover be pointed out to the officers concerned, and corrected at once as far as practicable.

The instructions that may thus be given to young and inexperienced officers is one of the greatest benefits expected from your visit to the frontier posts.

* * * * * * *

Substantially similar requests were made of the other inspectors-general by the commanders of the departments of "Texas," "the South," "the Gulf," "Dakota," "Arizona," and "the Columbia," and in accordance with their instructions from the War Department, prompt reports were made directly to those commanders, upon all matters which were deemed of interest to them, or which required their action, and it is believed that those reports received immediate action at the hands of the department commanders.

The inspectors-general report that the commanders of the departments above named rendered great assistance to them in the execution of their duties, by directing that the most ample facilities should be afforded them to investigate every branch of the service at all the posts and stations within their respective commands. The inspectors' reports also show that the officers generally gladly availed themselves of the opportunity afforded by their visits to ask instruction relative to the correct interpretation of doubtful points of law, regulations, and orders and upon other mooted questions regarding the proper performance o military duties; and it seems to me reasonable to presume that the ex tended and diversified experience of these officers, both in the staff and line of the Army, eminently qualify them to give suitable answers to questions of this character, as well as sound advice and instruction to young and inexperienced officers.

This, besides promoting social harmony, will doubtless tend to produce uniformity in the manner of performing military duty in different departments and localities, and will unquestionably fortify and encourage zealous and competent officers in their action, and thus greatly conduce to the discipline and efficiency of the Army.

Assistant Inspectors-General R. Jones, A. Baird, and E. H. Ludington have during the year been attached to the head-quarters of the military divisions of "the Pacific," "the Missouri," and "the Atlantic," respect ively. Their reports show they have been actively and usefully engaged in the duties pertaining to their positions, and, it is believed, to the entire satisfaction of their commanding officers.

Col. J. V. Bomford, Eighth Infantry; Lieut. Col. J. P. Hatch, Fourth Cavalry, and Capt. G. B. Russell, Ninth Infantry, for a portion of the year acted as assistant inspectors-general, but have been relieved.

Maj. W. H. Lewis, Seventh Infantry; Maj. A. W. Evans, Third Cavalry, and Capt. W.W. Sanders, Sixth Infantry, are respectively attached to the head-quarters of the Departments of Dakota, Arizona, and the Gulf, as acting assistant inspectors-general.

In compliance with the requirements of the system instituted by the Secretary of War, in General Orders No. 87, series of 1872, scrutinizing examinations have been made of the accounts of all officers who have made important disbursements of public money during the year. The funds received and expended by them, with the balances they reported due the United States, have been carefully compared and verified by official statements obtained from the Treasury Department and depositories.

Digitized by Google

If this system continues to be strictly carried out in accordance with the order, it is believed that few losses will occur to the United States, as it seems hardly possible that a defalcation can be concealed or overlooked for any great length of time, and it is gratifying to state that no embezzlement and but three cases of misapplication of funds have been reported during the year, the latter being small sums which probably will not result in any loss to the Government.

The inspectors report that in some cases the monthly balances of public funds on deposit, with the numbers and amounts of checks drawn, are not regularly furnished disbursing officers by the depositories, which prevents verifying their check-book balances with those of the depositories.

The inspection reports show that the troops have been well supplied with clothing during the year, although the new-pattern uniform has not yet reached some of the more distant posts. Subsistence supplies have been abundant and of good quality, but at a great many posts complaints have been made that large excesses of officers' and canned stores have accumulated and become damaged by age to such an extent as to render it necessary to sell them at much less than cost. At some of the posts three and four years' supply of certain perishable articles are reported on hand. Whether this surplus resulted from over-estimates or from the stores being furnished in excess of requisitions, or from the changes of troops, I am unable to say, but this condition of things has resulted in losses to the United States, and may, it is believed, be to a large extent avoided in the future if the post commissaries and post commanders, with the officers who fill the requisitions, are held to a rigid accountability that they call for and supply no more than is necessary.

Complaints have been made to the inspectors by the officers at many posts that their predecessors, on being relieved, have carried away files of orders, books, and other records which properly pertain to the posts; which practice should be promptly corrected by orders.

Inspector-General Davis states, in his annual report, that post quartermasters do not generally keep a proper morning report, accounting for their employés, public animals, and forage and fuel received, issued, and remaining on hand; this he regards as an important report, which, if properly kept, would avoid some discrepancies which might otherwise occur.

The inspections during the year have also disclosed the fact that at several posts large deficiencies of forage have existed, which the officers responsible have in some instances claimed resulted from great shrinkage in the dry atmosphere of the plains. There are good reasons for believing, however, that in some cases these deficiencies have arisen from want of proper care on the part of quartermasters in weighing and receiving the forage from contractors or predecessors.

Public animals picked up astray or coming into possession of quartermasters otherwise than by regular transfer, as well as forage rentered surplus by short issues, have not in all cases been taken up and accounted for until the attention of the authorities was called to the facts by the inspectors.

These irregularities are, however, exceptional, the inspection reports indicating that the officers performing the duties of quartermasters are generally improving in zeal and efficiency; that better care is taken of public property, and more regard manifested for economy and other interests of the service than heretofore.

All the facts above stated have been reported by the inspectors to

Digitized by Google

department commanders, who have, it is believed, taken prompt measures to investigate and correct the irregularities.

To prevent soldiers under charges from being confined for long periods previous to trial, it is suggested that post commanders be invested with authority to present for trial, before general courts-martial, cases not of an unusual character, that have arisen subsequent to the ordering of the court, without the charges being first referred to department commanders, which, at some remote posts, consume six weeks' time, and frequently involve the necessity and expense of convening another court-martial.

Notwithstanding the fact that the condition of the soldier in our Army has been greatly ameliorated, and his pay and allowances increased, by recent regulations and legislation, and although the aggregate number of desertions in the past fiscal year has been about five hundred less than during the previous year, yet the desertions have continued to such an extent as to still constitute an evil to the service of the greatest magnitude. Many remedies have been suggested as preventive for this, one of the most heinous of military crimes, which involves not only an entire disregard of soldierly honor, but a deliberate act of perjury; yet nothing seems to have had the desired effect. But few deserters have been apprehended on the frontier, for the reason that in many localities they have been protected by the citizens, who do not generally appreciate the turpitude of the crime.

One of the inspectors-general has suggested a remedy which appears to me worthy of consideration. It is, that desertion be constituted by legislative enactment as a felony cognizable by the civil courts of criminal jurisdiction, the offenders to be arrested by marshals and deputies, like other criminals, but this jurisdiction to be concurrent with military courts.

This, it is believed, would have the effect of educating and impressing the public mind with a proper sense of the criminality of the offense, and prevent evil-disposed persons from harboring deserters.

It would, in my judgment, greatly augment the efficiency of the Army were more instruction given to recruits previous to sending them to organizations from the recruiting depots.

Since the reduction of the Army to the existing standard, urgent calls for recruits to fill vacancies in the different regiments upon the frontier have generally prevented them being kept at the depots more than a week or two, and they frequently join their companies knowing nothing of the use of arms, or even the position of a soldier. Whereas if they were properly instructed for three months at the recruiting depots they would be proficient in the company exercises.

The majority of the troops are now doing duty in the Indian country, where they are not only required to perform service as arduous and hazardous as in time of war, but they are often compelled to procure material for and build their own quarters, which, with their other indispensable fatigue duties, consumes so much of their time that it is frequently impossible to give them much systematic military instruction at the military posts on the frontier.

Besides, the exigencies of the service very often leave but one commissioned officer with a company, and his time is so much taken up with scouting, escorting, and his other multifarious duties, that he can give but little attention to drills or other military teaching.

I deem it proper to remark here that the adoption of the new code of Army Regulations, recently submitted to Congress for approval, will pro-

Digitized by Google

vide remedies for most of the irregularities and evils that have been mentioned.

The old Army Regulations of 1863, which, under the act of July 28, 1866, are to continue in force until the adoption of a new code, do not meet the existing exigencies of the service. Indeed, they have been so altered and amended by laws and orders, that it often requires considerable study and research to determine their actual signification Besides, this edition is now exhausted, with but few tattered copies extant, so that, unless something is done soon, it may be truly said that our Army have no regulations.

The officers, for the most part, are exceedingly desirous that a new code which they can comprehend should be speedily promulgated. In view of this, and the additional fact that the regulations now before Congress will settle many mooted military questions that have never been touched upon in former editions, and this in accordance with opinions of the best military minds we have ever had in service, and as *in my judgment* they are in other respects eminently adapted to the existing necessities of the service, I beg leave again most respectfully to recommend the early action of Congress upon them.

Respectfully submitted.

R. B. MARCY,
Inspector-General.

The ADJUTANT-GENERAL OF THE ARMY.

REPORT

OF

THE JUDGE-ADVOCATE-GENERAL.

WAR DEPARTMENT, BUREAU OF MILITARY JUSTICE,
Washington, D. C., October 1, 1873.

SIR: In compliance with instructions of circular of the 13th ultimo, I have the honor to submit for your consideration the following statement of the business of this Bureau since the date of my last annual report, of October 1, 1872:

1. Number of records of military courts received, reviewed, and registered, 16,088.

2. Number of special reports made upon court-martial proceedings, and applications for remission of sentences, and upon the miscellaneous questions of law, &c., referred for the opinion of the Bureau, 823.

3. Abstracts of proceedings of trials furnished to the proper officials of the War and Treasury Departments, 1,737.

4. The copies of records furnished under the ninetieth article of war to parties tried by military courts have amounted to 7,723 pages.

The amount of business thus performed during the past year varies little from that reported for the year preceding.

The work of systematically arranging, indexing, &c., the voluminous official papers of the late Provost-Marshal Baker, heretofore reported as in progress, has been completed during the current year.

Respectfully submitted.

J. HOLT,
Judge-Advocate-General.

Hon. W. W. BELKNAP,
Secretary of War.

REPORT

OF

THE QUARTERMASTER-GENERAL.

QUARTERMASTER GENERAL'S OFFICE,
Washington, D. C., October 10, 1873.

SIR: I have the honor to submit the annual report of operations of the Quartermaster's Department during the fiscal year ending 30th June, 1873.

On the 1st July, 1872, the balance on account of appropriation for years prior to 1st July, 1870, remaining to credit of the Quartermaster's Department in the Treasury undrawn, was by report of last year		$2,290,164 71
Amount placed to the credit of appropriations during the year by deposits of funds for redistribution, and of amounts received from sales to officers of public property purchased prior to July 1, 1870		373,035 81
Amount expended for other Departments prior to July 1, 1870, and refunded by them during the last fiscal year		424,428 85
		3,087,629 37
Requisitions on settlements made at the Treasury of claims and accounts		1,449,743 37
Balance to the credit of appropriations for periods prior to July 1, 1870, remaining in the Treasury June 30, 1873		1,637,886 00

Appropriations for the fiscal year ending June 30, 1871.

Balance in the Treasury July 1, 1872		$272,862 25
Amount placed to the credit of appropriations during the year by deposits of funds for redistribution, and of amounts derived from sales to officers of public property purchased during the year ending June 30, 1871		8,374 55
Amount expended for other Departments during the fiscal year ending June 30, 1871, and refunded by them during the last fiscal year		33,838 70
Total		315,075 50
Remitted to disbursing officers during the year, on requests of the Quartermaster General	$550 65	
Requisitions on settlements made at the Treasury of claims and accounts	55,019 45	
		55,570 10
Balance in the Treasury June 30, 1873		259,505 40

Appropriations for the fiscal year ending June 30, 1872.

Balance in the Treasury, July 1, 1872, of amounts appropriated by acts of Congress approved March 3, 1871, and May 18, 1872		$99,863 39
Appropriation for deficiencies, act of Congress approved March 3, 1873.		1,110,000 00
Transportation of insane volunteers, act of Congress approved May 18, 1872		1,000 00
Amount placed to the credit of appropriations during the year by deposits of funds for redistribution, and of amounts derived principally from sales to officers of public property purchased during the year ending June 30, 1872		331,024 32
Amount expended for other Departments during the fiscal year ending June 30, 1872, and refunded during the last fiscal year		21,199 92
Total		1,563,087 63

Remitted to disbursing officers during the year on requests of the Quartermaste rGeneral	$148,296 84	
Requisitions on settlements, made at the Treasury, of claims and accounts	384,078 67	
		$532,375 51
Balance in the Treasury July 1, 1873		1,030,712 12

Appropriations for the fiscal year ending June 30, 1873.

Appropriations for fiscal year	$12,114,219 00
Appropriations for deficiencies, act of March 3, 1873	1,570,000 00
So much of the $200,000 appropriated by the act of March 3, 1873, for preservation of clothing and equipage from moth and mildew, during the year ending June 30, 1874, as was used during the year ending June 30, 1873, the appropriating act rendering it available in that year	150,000 00
Amount placed to the credit of appropriations during the year by deposits of funds for distribution, and of amounts derived principally from sales to officers of public property purchased during the year ending June 30, 1873	16,114 56
Amount expended for other Departments, and refunded by them during the fiscal year	25
Total	13,850,333 81

Remitted to officers for disbursement on requests of the Quartermaster General	$13,365,188 96	
Requisitions on settlements made at the Treasury of claims and accounts	22,032 52	
Transferred to the Ordnance Department for the manufacture of knapsacks, canteens, and great-coat straps.	41,953 33	
		13,429,174 81
Balance in Treasury June 30, 1873		421,159 00

The accounts and vouchers which have been examined in this office since the last annual report show disbursements as follows:

On account of appropriations for years prior to the fiscal year ending June 30, 1872	$1,843,605 1
For the fiscal year ending June 30, 1872	8,041,800 0
For the fiscal year ending June 30, 1873	5,638,632 9
Total	15,524,038 1

Appropriations are charged with these disbursements as follows:

Appropriations for the Quartermaster's Department.

	Prior to July 1, 1871.	Fiscal year 1871–1872.	Fiscal year 1872–1873.	Total.
Regular supplies	$376,804 66	$2,940,066 23	$2,182,432 29	$5,499,303

At the close of the fiscal year the balances remaining in the hands of officers and not needed to discharge liabilities incurred during the fiscal year, and payable out of these balances, were called in and transferred to officers who found themselves deficient in funds to pay for supplies and services purchased or rendered under orders of their commanders.

This money, scattered all over the United States and Territories among some three hundred disbursing officers, has not yet been all brought into the Treasury, and the process of settlement of outstanding accounts is still going on. It appears that these balances thus collected will not be sufficient to pay for all the supplies purchased and services rendered, and a deficiency estimate has accordingly been submitted. It amounts to:

Regular supplies	$206,000
Incidental expenses	241,000
Army transportation	592,000
Barracks and quarters	127,000
Total	1,166,000

The principal deficiency is in the appropriation for transportation; but there are also deficiencies in regular supplies, incidental expenses, and barracks and quarters.

It is impossible for any human intelligence to predict the exact nature and cost of the military operations of a nation during a period of twelve months, which begins nearly twelve months after the estimate is made.

The average ordinary general expenses of the Army do not differ greatly from year to year, but the separate items differ greatly, as changes are more or less frequent in the stations of the troops, and as new posts are established and new districts occupied.

The estimates of this office are based upon experience, and when reduced it is not always possible for the War Department to so regulate the military movements and to control the cost of articles given by law and regulations to the troops in certain definite quantities as to keep within the appropriation.

The law gives to officers and men certain fixed supplies of clothing, of quarters, of transportation, and when the appropriations are deficient, the officers find themselves in the dilemma of failing to provide what the law requires them to supply, or of incurring liabilities beyond the amount of the appropriations. Whichever course is taken violates law.

The forms and methods of keeping and making accounts and returns in the Quartermaster's Department have been improved and simplified by the issue of General Orders No. 64, October 25, 1871; No. 68, November 4, 1871; No. 7, February 21, 1872, and No. 98, November 14,

Digitized by Google

1872. These four orders publish in compact form the existing regulations for making returns of money and of property, and those which govern the system of transportation of military material and of troops.

They have now been in operation, the two former for nearly two years, and the latter for one year, and the annual reports of officers doing duty in the Quartermaster's Department are bearing almost unanimous testimony to the advantages in simplicity and intelligibility of the forms and system now in use and established by these general orders.

I regret to see in the system of regulations recommended to the War Department by a board of officers, and, under the law of July 15, 1870, communicated to Congress, a proposition to transfer from the Quartermaster's Department to the Commissary Department a large portion of the duties of this Department.

The Quartermaster's Department has always had as one of its special duties the transportation of all military stores. It is organized and trained especially to this duty, and there can be no doubt that simplicity, and economy, and efficiency in military operations are best secured by committing such an important branch of the service to some one military department. Hence, I consider as likely to be very injurious, should it be adopted, the proposition to transfer to the Subsistence Department the transportation and storage of subsistence supplies.

The proposition is that the Subsistence Department shall be responsible for and have control over the transportation of its supplies; that commissaries, in addition to purchasing and issuing as heretofore, shall contract for all transportation of their supplies, wherever rail or water transportation can be contracted for or hired; that, when supplies are to be transported to posts away from rail or water, the commissary shall make requisition on the quartermaster, at the point where such supplies leave rail or water, for Government wagons and teams for their transportation. If the quartermaster cannot furnish these, the commissary to hire wagons or contract for the delivery of the supplies at the place of destination; and at points of transshipment, if there are no suitable store-houses, the commissary to hire or build such as are needed. This, if adopted, will transfer to the commissary a large part of the duties of the quartermaster. It will establish two great parties competing against each other at all important strategic points for transportation. The officer of each department will have as a first duty the success of his own department of the service, the fulfillment of the orders he receives. If there is but one steamboat, the quartermaster and the commissary will compete for its control, and the prices of freight will advance.

If there is a scant supply of wagons, of mules, or of oxen, the same competition will spring up. Instead of one department dealing with the owners of the steamboat, the railroad, the wagon, the inland mule or ox-train, there will be two, each acting in the interest of the same party, the United States, but competing and bidding against each other. So, too, instead of one department and one set of officers, as heretofore, constructing or renting the requisite store-houses, there will be two competing for the lease, and as the quartermaster will have no footing in the commissary store-houses there will be two store-houses erected or hired at the expense of the Treasury instead of one. Responsibility, too, will be divided and weakened. The commissary is to do these things after his goods leave the railroad or steamer in case the quartermaster is unable to furnish the wagons and has no spare store houses.

There are other provisions in the draft of these regulations, as printed

Digitized by Google

by Congress, H. R. Report 85, which make radical changes in the positions of large numbers of officers.

The Quartermaster's Department has been recognized by law, and by regulations and orders, as a part of the general staff of the Army. In it promotion and rank are regulated as a part of the staff. These proposed regulations propose to change all this, and to remand certain most important departments of the staff to a separate and anomalous condition as parts of a special staff or administrative service or supply-branches of the service.

The experience of many years in this country, and observation of the course of military events here and elsewhere, which in the life-time of this generation have been on a very great scale, both at home and abroad, have conclusively vindicated the system of this country which gives to all officers of the staff of the Army on whose intelligence, skill, and zeal the application and support of the physical and moral power of the soldier depend, military rank and military responsibility. This principle has been lately introduced even into the Navy. It secures a higher order of service, greater zeal, intelligence, ardor, and integrity, and now the draft of new regulations proposes to cripple and weaken this system by driving these several corps of intelligent officers out of the position and standing in which they have won honor to themselves, done credit to the Army, and good service to their country in time of its greatest need.

While the system of reports and accounts has been simplified by the action of the War Department in the publication of these general orders, legislation has introduced into all the accounts of this office, and of hundreds of disbursing officers, a serious difficulty and complication. Each officer of the Quartermaster's Department who disburses money has occasion to expend it under several of the different heads of appropriation. Though he may have a large sum of money to his credit and subject to his check, he may be unable to pay a just bill for forage or for services because he has none of that particular appropriation on hand. This increases nearly nine-fold the entries in his accounts. It often occasions delay in payment of the public creditor, and by complicating the accounts increases the liability to errors and disallowances. Both the officer and the public creditor suffer, and the Treasury suffers in many ways, as each disbursing officer must have a working balance under each head of appropriation; the total amount lying to his credit, unused, in the public depository must be much greater than if, out of any sum to his credit, he was allowed to pay any just account. The remedy for this evil—and it is a great one—would be the making of the appropriations for the Quartermaster's Department under a single title.

While the total gross sum needed for the service of this Department can be estimated for any ordinary year with considerable accuracy, it is not possible to secure absolute accuracy in each of the million items which go to make up the sum total, or in the several divisions under which it has been customary to present these estimates to Congress. It would be much better to appropriate for the Quartermaster's Department in one gross sum equal to the aggregate of the estimate, and thus simplify accounts and secure the prompt and certain payment of the public creditor. All dealers now charge something for the risk of delay which experience shows them that the present system too often causes.

The report of the officer in charge of the branch of this office which examines the accounts of disbursing officers sets forth in detail the inconvenience and injury to the service arising from this system, and the report (H. R. No. 87, Forty-second Congress, third session) by

Digitized by Google

the Committee on Expenditures in the War Department, printed by the House of Representatives, also very forcibly presents the case.

The following table, which gives the balances remaining in Treasury on account of the Quartermaster's Department on the 30th June, 1873, will show the complication of accounts caused by the requirement of the law to treat each head of appropriation under each year as a separate and distinct appropriation, to be drawn upon and accounted for separately. There are forty-three separate appropriations.

Balances of appropriations undrawn by the Quartermaster's Department, July 1, 1873.

	Prior to July 1, 1870.	1870–1871.	1871–1872.	1872–1873.	1873–1874.
Regular supplies	$363,400 86	$82,068 03	$89,263 98	$1,688 55	$4,500,000 00
Incidental expenses	154,582 71	63,330 62	128,223 05	3,813 40	1,300,000 00
Purchase of horses	51,773 50	12,231 29	22,109 73	7,692 96	350,000 00
Barracks and quarters	125,124 02	45,075 91	79,902 32	32,952 33	1,700,000 00
Transportation of the Army	801,844 32	8,597 38	684,684 14	156,541 92	4,492,096 50
Transportation of officers' baggage	29,882 66				
Clothing of the Army	76,312 66	47,180 55	26,488 90	4 53	1,045,037 92
Stoves	34,493 27	21 60	40 00		
National cemeteries					275,000 00
Clocks for permanent posts	522 00				
Hospitals				15,473 49	100,000 00
Expenses of sales				9,157 57	
Head-stones				183,866 25	1,000,000 00
Monument at Salisbury, N. C.				10,000 00	
Preservation of clothing					50,000 00
Total	1,637,936 00	259,505 40	1,030,712 12	421,191 00	14,812,134 42

The number of money-accounts and of property-returns examined during the past year is not so great as in previous years. This is due in great measure to the increased difficulty of the settlement under the act of 3d June, 1870. But at this time all accounts and returns for years prior to 1873 have been examined, and nearly all those for first quarter of 1873 have been examined. Those for the second quarter of 1873 are now in course of examination, and the examination of those for the third quarter, which has just closed, will be commenced before all are received from officers. The work of examination may therefore be said to be up to date.

The Quartermaster's Department is charged with the duty of providing the means of transportation, by land and water, for all troops and all material of war. It furnishes the horses of the artillery and cavalry, and horses and mules for the trains. It provides and distributes clothing, tents, camp and garrison equipage, forage, lumber, and all material for camps and for shelter of troops and of stores. It builds barracks, hospitals, store-houses; provides wagons and ambulances and harness, except for cavalry and artillery horses; builds or charters ships, steamers and boats, docks and wharves; constructs and repairs roads, railways, and bridges; clears out obstructions in rivers and harbors when necessary for military purposes; provides, by hire or purchase, grounds for military encampments and buildings; pays, generally, all expenses of military operations not by law expressly assigned to some other department; and, finally, it provides and maintains military cemeteries, in which the dead of the Army are buried.

Food, arms, ammunition, medical and hospital stores are purchased and issued by other departments, but the Quartermaster's Department transports them to the place of issue, and provides store-houses for their preservation until consumed. The corps of officers upon whom all these

Digitized by Google

duties fall has been reduced by time until it is not able to fill well every post at which an officer of activity and ability is needed. Its ranks should be now opened to promotion and appointment.

Many officers of the line, finding themselves charged with heavy responsibility as acting assistant quartermasters, and having insufficient assistance, at frontier posts, ask that the enlistment of post quartermaster-sergeants may be allowed by law. Such non-commissioned officers, selected for experience and fidelity shown in actual service, would be very useful. They would remain at posts in charge of the property when the garrison changed, and thus would preserve knowledge and responsibility now often lost through the frequent change of officers. Such officers also ask that some compensation may be granted them for the risk which they incur in the disbursement of public money, and for the responsibility involved in the care of large amounts of public property.

I have the honor to renew the recommendation heretofore made, that an allowance of $10 per month be made in addition to the pay of every line officer who is detailed by proper authority as acting assistant quartermaster of a military post, when such detail is properly reported to and approved by the War Department. Such an allowance is only just, and it would relieve the service from the feeling that heavy duties are imposed by such detail without any recognition or compensation. Such duties are important, and they should be sought by good officers, not imposed upon the slothful or unwilling.

About three hundred and eighty officers of the line act every year for some portion of the time as acting assistant quartermasters.

The officers of the regular establishment of the Quartermaster's Department, all of whom have served through the late war and have had much experience, are stationed at the more important depots and posts. Yet many posts, involving heavy responsibility in money and property, and calling for good judgment, integrity, and zeal, are occupied by subalterns of the line, on duty as acting assistant quartermasters.

The expenditures of the Quartermaster's Department have been distributed throughout the country among the several military departments and divisions, and the principal purchasing and supply depots, as follows:

Remittances to disbursing officers in the Military Division of the Atlantic		$448,872 59
Of which there was sent to—		
Department of the East	$335,267 20	
Department of the Lakes	113,605 39	
To the Military Division of the Missouri		6,230,133 79
Of which there was sent to—		
Department of the Missouri	1,024,892 80	
Department of the Platte	1,135,670 93	
Department of Dakota	854,154 35	
Department of Texas	1,748,234 29	
District of New Mexico	451,308 25	
Depot at Chicago	499,756 46	
Depot at Saint Louis	516,116 71	
To the Military Division of the Pacific		3,066,342 37
To the Military Division of the South		1,020,054 64
Of which there was sent to—		
Department of the South	695,792 61	
Department of the Gulf	324,262 03	
To the principal depots		2,364,295 84
Of which there was sent to—		
New York	349,760 33	
Washington	726,071 52	
Philadelphia	1,108,110 20	
Jeffersonville	180,353 79	

Digitized by Google

To officers in immediate charge of national cemeteries		$137,104 85
To independent posts		98,484 88
Of which there was sent to—		
West Point, N. Y.	$44,905 74	
Springfield armory, Mass	2,431 68	
Fort Columbus, New York Harbor	826 50	
Cavalry depot, Saint Louis	3,800 93	
Newport Barracks, Ky	7,551 37	
Columbus arsenal, Ohio	1,223 50	
Indianapolis arsenal, Ind	789 10	
Watertown arsenal, Mass	11,838 60	
Allegheny arsenal, Pa	2,557 00	
Watervliet arsenal, N. Y.	10,261 25	
Frankford arsenal, Pa	200 00	
Pikesville arsenal, Md	317 11	
Augusta arsenal, Ga	2,337 30	
Kennebec arsenal, Me	805 93	
Benicia arsenal, Cal	4,148 73	
Detroit arsenal, Mich,	892 46	
Rock Island arsenal, Ill	3,597 68	
Total amount remitted		13,365,188 96

Remittances from the appropriation for the fiscal year ending June 30, 1873, have been made as follows:

Regular supplies:		
Fuel	$1,128,956 68	
Forage	3,197,430 06	
Straw	84,801 60	
Stationery	94,894 89	
Stoves	88,615 23	
Total regular supplies		$4,594,700 46
Incidental expenses		1,300,380 48
Horses, cavalry and artillery		292,714 54
Barracks and quarters:		
Rent of quarters for officers	$323,092 00	
Rent of store-houses, offices, commutation of quarters for enlisted men, &c	312,318 03	
Building-material for repairs	550,161 64	
New buildings authorized	281,356 26	
Total barracks and quarters		1,466,928 03
Army transportation		4,325,601 99
Clothing and equipage		858,412 07
National cemeteries		250,729 70
Hospitals		84,526 51
Stoves		10,000 00
Preservation of clothing and equipage from moth and mildew		150,000 00
Mojave claims, (special appropriation)		14,219 00
Head-stones		16,133 75
Expenses of sales		842 43
Total amount remitted		13,365,188 96

INSPECTION BRANCH.

To this branch of this office are committed the keeping of records o stations and duties of officers, of correspondence, the examination o reports of inspection, of reports of boards of survey, the filing and pre servation and distribution of orders and circulars. Through this branch of the office about 180,000 papers pass and are recorded yearly. List of the officers of the Quartermaster's Department, and of officers of th line who have served in the Quartermaster's Department during th year, with their stations and duties, will be found attached to th report.

Digitized by Google

INDEBTED RAILROAD COMPANIES.

At the close of the war, under executive orders of 8th August and 14th October, 1865, there were sold on credit to various railroad companies, principally in the South, railroad material to the appraised value of..	$7,556,033 95
There remained due and unpaid from certain of these railroads on 30th of June, 1872	4,734,442 43
During the past fiscal year, interest and expenses accrued upon this debt to the amount of	101,573 95
Payments during the year, on account, have amounted to	151,303 44
On the 30th June, 1873, the debt uncollected amounted to	4,658,924 07
exclusive of the sum of $25,788.87 due from the New Orleans and Ohio Railroad, which debt is lost by the bankruptcy of the company. The total collections on account of this debt, to 30th June, 1873, amount to	5,116,605 53

The earlier collections, being reimbursements of the Quartermaster's Department for property originally purchased with its appropriations, were applied to its service, reducing the amounts of the annual estimates for appropriations; but since the passage of the law of May 8, 1872, requiring all proceeds of sales of public property to be deposited in the Treasury, to credit of miscellaneous receipts, these collections have taken that course. Fifty railroads originally availed themselves of the privileges of the executive orders. Thirty of them have paid their debts in full with interest. Twenty now remain in debt to the United States on this account.

A full statement of these accounts accompanies this report; to it reference is made for detailed information.

Against some of the roads greatly in default suits have been commenced in the United States courts.

Since my last report the suit against the Nashville and Decatur Railroad has been compromised and settled by the Secretary of War, under authority of the act of 3d March, 1871, (16 Stat., chap. 119) for the sum of $70,000, of which $6,000 was paid in cash, the balance to be paid in ten years from 1st July, 1872, with interest, semi-annually, at the rate of 5 per cent. per annum, secured by bond and lien upon the property of the company, guaranteed by the Louisville and Nashville Railroad, and by decree of the United States circuit court affirming the liability, and to be enforced by execution in case of default.

Other suits are yet unsettled, for details in reference to which I refer to the report of Major Ludington, the officer in charge of the transportation branch of this office, which accompanies this report.

Some of the roads largely indebted to the Government, and which have given bond for the application of their postal earnings to the payment of their debt, refuse or persistently neglect to give the order for the payment of their earnings, which, in the judgment of the Post-Office Department, is necessary, before the money can be thus applied. Some of these earnings have thus, under the law, lapsed into the Treasury; other considerable amounts are locked up. They are not turned over to the roads, but not being turned over to this Department it cannot credit the debt account of the railroads with them.

Some provision of law for the collection of this money and settlement of the debt, so far as it will go, is desirable.

TRANSPORTATION.

The General Order No. 98, of 1872, establishing the improved system of transportation, has been distributed to officers of the Army and to all railroads and transportation companies having dealings with this

Digitized by Google

office. It is found to be satisfactory to the officers and to the public with whom they deal.

The total movement of transportation during the year, thus far reported, amounts to 72,860 persons, 8,148 beasts, and 164,125,223 pounds of material.

The cost of railroad transportation during the year amounts to $1,235,579.43, of which accounts for $921,514.87 have been settled or transmitted by this office to the Treasury for settlement.

The movement over the Pacific Railroad has been:

Name of railroad.	No. of persons moved.	No. of beasts moved.	Freight in pounds.
Union Pacific	6,166	1,763	21,697,106
Central Pacific of California	3,034	63	2,444,211
Kansas Pacific	1,951	390	5,711,947
Sioux City and Pacific	223	36	3,544,054
Total	11,374	2,252	33,397,318

The cost of this service is estimated at:

For the Union Pacific Railroad	$445,501 00
For the Central Pacific Railroad	136,598 07
For the Kansas Pacific Railroad	149,797 00
For the Sioux City and Pacific Railroad	2,402 44
Total value of service of the Pacific railroads during the year	734,298 51

Until the passage of the act of 3d March, 1873, one-half the earnings of these roads for military transportation was paid in cash, on proof of service, and the other half was retained by the Treasury to be used in payment of the interest on the United States bonds issued to them. Since the passage of that law the whole of these earnings have been withheld by the Secretary of the Treasury, but it is charged against the appropriations for transportation of the Army.

The earnings of the Pacific railroads in the previous fiscal year, ending June 30, 1872, were $800,857; in the year ending June 30, 1871, $767,047.99.

WAGON AND STAGE TRANSPORTATION.

By wagon we moved during the year 756 passengers, 32,004,635 pounds of material; by stage, 1,380 passengers, 3,648 pounds of material. The cost of wagon transportation was $997,943.44; of stage transportation, $59,319.29.

Thirty-two contracts for wagon transportation are reported during the year.

The existing contract for wagon transportation from the line of the new Atchison, Topeka and Santa Fé Railroad, and from the Kansas, Pacific and Denver and Rio Grande Railroads, to posts in the Department of Missouri, and in Texas and New Mexico, and to Camp Apache, Arizona, is at the rate of 90¾ cents per 100 pounds per one hundred miles. This is a considerable reduction from the previous contracts, which averaged $1.17½.

The existing wagon contract rates in Texas generally show a material reduction in price, attributable to the extension of railroads into the interior, the shortening of the wagon routes, and the avoidance of the routes through the heavy soils and wet climate of the coast.

Digitized by Google

On the Pacific coast the rates have slightly increased. The demand for transportation due to the Modoc war, carried on during the rainy season, will account for this increase. That campaign was very destructive to the means of transportation.

WATER TRANSPORTATION.

By water the movement has been of 37,789 persons and 2,026 beasts, and 55,467,201 pounds of stores. The cost of this, so far as the bills have been settled, was $760,973.58.

Three small steamers and two schooners owned by the United States have cost during the year $37,413.19. Twelve vessels have been hired or chartered during the year, at a cost of $43,056.76. Both these sums are included in the aggregate cost of transportation by water, reported above.

During the past fiscal year accounts and claims for transportation service rendered in previous years have been paid, or transmitted from this office to the Treasury for payment, amounting to $652,409.17.

CONTRACTS FOR REGULAR AND MISCELLANEOUS SUPPLIES.

During the year 614 contracts for supplies were reported to this office, as follows: For forage, 230 contracts for 20,318,814 pounds of oats or barley, 19,372,472 pounds of corn, 30,744 tons of hay, 439,000 pounds of bran; 11 for 2,508 tons of straw; 30 for 22,011 tons of coal; 144 for 84,022 cords of wood; 37 for 49,075 bushels of charcoal; 4 for construction of quarters; 47 for transportation; 7 for horses and mules; 12 for clothing, camp and garrison equipage; 16 for national cemeteries, and many for miscellaneous supplies and services.

FORAGE, STRAW, AND FUEL.

The issues of these supplies have been: Corn, 588,488 bushels; oats, 939,690 bushels; barley, 172,870 bushels; hay, 48,588 tons; fodder, 116 tons; straw, 3,292 tons; bran, 55,084 bushels. Of wood, the issue was 130,786 cords; of anthratic coal, 16,937 tons; of bituminous coal, 15,300 tons.

ANIMALS.

One thousand nine hundred and thirty-eight horses, costing $255,460.19, were bought during the year. The average cost in California was $110.11; in the Department of the Columbia, $115; Department of the Missouri, $126.36; in Texas, $132.46; Dakota, $139.

In addition to occasional purchases of horses to supply losses, 1,200 remounts were authorized this spring for the several cavalry regiments, as follows: For First Cavalry, none; Second Cavalry, 175; Third Cavalry, none; Fourth Cavalry, 175; Fifth Cavalry, 150; Sixth Cavalry, 100; and Seventh, Eighth, Ninth, and Tenth Cavalry, each 150. Those for the Second, Sixth, Seventh, and Tenth Regiments were purchased in Missouri, Iowa, and adjoining States; those for the Fifth, in California; those for the Fourth, in Texas; those for the Eighth, at Leavenworth and in Colorado, and those for the Ninth, at points designated by the general commanding Department of Texas. These purchases were made by boards of officers assembled by the department commanders, each board consisting of a quartermaster and one or two

Digitized by Google

officers of the regiment for which the horses were intended. The boards moved through the districts assigned for their operations; published their wants by posters, and purchased from farmers and stock-raisers direct, without intervention of middlemen. The result has given satisfaction, and the system secured good horses at fair prices.

MULES.

Two thousand three hundred and ninety-seven mules were purchased for the trains at a cost of $328,033.02. The greater number of these were bought for the expedition to escort the Northern Pacific Railroad surveying party from Fort Abraham Lincoln, on the Missouri, to and beyond the Yellowstone River. The average cost of mules was $137.

One thousand and fifty-one horses were sold for $46,624.43; 200 mules, for $9,313.06. The proceeds, $55,937.49, have been deposited in the Treasury to the credit of miscellaneous receipts.

Four hundred and twenty-four horses and 489 mules are reported to have died, and 158 horses and 100 mules to have been lost or stolen during the year, and the number in service at the close of the year was 10,130 horses and 10,425 mules.

ARMY WAGONS AND HARNESS.

There are reported in service 3,107 wagons, 125 spring-wagons, 240 ambulances, 23,411 sets of wagon-harness, 2,148 sets of ambulance-harness, all serviceable.

The stock of wagons in the Army has suffered by use and age. Even those kept in store have deteriorated by dry-rot and by attacks of insects, to which hard timber is liable, so that many of those in use were unreliable and unfit to be used on a long march. The Yellowstone expedition, in Department of Dakota, was outfitted with a new train, and many new wagons have been sent to other departments to replace those which had failed or threatened to fail.

Five hundred and fifty new wagons were purchased during the year. Two hundred and fifty, purchased in open market to meet the emergency of the immediate outfit of the Yellowstone expedition, cost $175 each. Contracts were made for the others, giving more time for the manufacture, at $149.50 each.

The train-wagon used for many years in the operations of the United States Army before the war is of excellent design and construction. In the very dry climate of the higher plains, and in the deserts of the Colorado and Gila, exposed to a scorching heat, and in an atmosphere without moisture, the timber shrinks and cracks. The wagon-builders of this country have for several years been experimenting with metallic hubs, many of which have been patented. Of some of the best of these, many thousands are now annually made and put into use. I believe that some of them will prove to be better fitted for use in the extremely dry climates than wood, and samples of each of those which appeared to be best have been purchased and distributed to posts in the most trying climates for trial. The change is an important one, and will not be made, generally, unless the result of these trials is conclusive in favor of some one of the metallic hubs.

HORSE-SHOES AND SHOEING-MATERIAL, SMITHS' AND SADDLERS' TOOLS.

Under the provisions of General Orders No. 2, War Department, Adjutant-General's Office, January 2, 1873, the supply of tools and of shoes

Digitized by Google

for shoeing cavalry and artillery horses was transferred from the Quartermaster's Department to the Ordnance Department, and large quantities of these materials and tools purchased by the Quartermaster's Department have, under that order, been transferred to the officers of the Ordnance Department.

The Quartermaster's Department must still keep smiths and tools for repair of its wagons, and for shoeing the draught animals, at every post, and when there are, as is frequently the case, no enlisted farriers with a body of cavalry, its officers are still called upon to provide for shoeing their horses. Thus two establishments are kept up throughout the military service to do the same thing, which appears not to be an efficient or economical arrangement.

EPIZOOTIC.

The epidemic catarrh which traversed the continent during the past year, visited, it is believed, every military post, and attacked a great majority of the horses and mules of the military establishment. It appeared early in New York and its vicinity, and a method of treatment adopted by Brevet Major-General Ingalls, assistant-quartermaster general, upon the advice of the veterinary surgeons of New York, was printed and distributed to military posts:

HEADQUARTERS DEPARTMENT OF THE EAST,
OFFICE CHIEF QUARTERMASTER,
New York City, October 28, 1872.

[Circular.]

The attention of officers and agents in charge of public animals belonging to the Quartermaster's Department in the Department of the East is called to the "epizootic catarrh" now prevalent among horses. They are directed to observe the following rules for the treatment of this disease, and to report results to this office at the end of the present month, and every ten days thereafter, until the disease disappears.

It is assumed that the stables are always kept clean, dry, and well ventilated, with plenty of fresh air and sunlight, when possible. It is also assumed that the horses are never overworked, but properly exercised at all times, whether sick or well, and that they are fed with wholesome forage, regularly groomed, and kept warm.

RUFUS INGALLS,
Col. and Asst. Q. Gen., Bvt. Maj. Gen., U. S. A., Chief Quartermaster.

Rules for the treatment of the disease.

On the first appearance of the disease give the horse a thorough steaming with hot-boiled oats, placed in a bag, and so fastened to the head that the steam from the oats will be inhaled. Repeat this until the discharge from the nostrils is free and of a natural color. Then take leather, or, what is better, carbolic disinfectant, in grains like large-sized cannon-powder, place it in a shallow pan, and burn it where the horse will be obliged to breathe it.

If the throat is sore, (which generally will be the case,) apply frequently hot vinegar, rubbing it well with the hand, and wrap the throat in flannel, dipped in vinegar. Sponge out the nostrils frequently with warm vinegar. Blanket well, night and day, but not enough to produce sweating, and give plenty of fresh, clean bedding.

Give several bran mashes, with from one-half to one ounce of powdered niter in each, and use linseed-meal or flax-seed in the oats. Use tepid water in the mash.

The hay and oats should be moistened with water—preferably tar-water.

Most cases if taken in time will yield to the above treatment; but should the attack be very severe, accompanied with considerable fever, and very sore throat, instead of the vinegar, an embrocation of equal parts of linseed-oil, turpentine, tincture of cantharides, and hartshorn should be rubbed in night and morning.

Powell's embrocation is very good.

Give as a drench, night and morning, the following:

Spirits of nitric ether	1 ounce.
Laudanum	4 drams.
Nitrate of potassa	3 drams.
Water	1 pint.

Mix.

Digitized by Google

Should the horse refuse his feed, offer him frequently thin gruel, with a handful of pulverized slippery-elm bark, and licorice-root stirred in it.

When convalescing, exercise gently daily, and stimulate the appetite with the following ball:

Extract of gentian ..... 6 drams.
Powdered ginger ..... 2 drams.
Mix.

A handful of wood-ashes mixed with a little salt, thrown into the feed-trough for the horse to lick up, will be relished by him and be beneficial.

At a later date the Secretary of War communicated to this office the following simple prescription, with directions to communicate it to all officers of the Army in charge of public animals:

One teaspoonful of chlorate of potash twice a day to four horses, put in a pail of water, and let each horse drink his proportion.

These two prescriptions were thus made known. The losses by death from the disease were very small, but the operations of supply were everywhere delayed and deranged as long as the disease prevailed. It was very hurtful, during its prevalence, among the animals employed in hauling supplies to the troops operating against the Modocs, and for a time it dismounted the cavalry in that campaign, as also in Arizona.

THE YELLOWSTONE EXPEDITIONS.

In the summer of 1872 an expedition left the Missouri River to escort a party of engineers to explore a line for the Northern Pacific Railroad to the valley of the Yellowstone. This march showed that the wagon-trains, composed of wagons purchased during the war, had outlived their usefulness, and for the larger expedition organized in the month of June of the present year, it was necessary to procure a large number of new wagons and many mules. One hundred and fifty new wagons were supplied, which, with about fifty reported to be good and available in Dakota, completed the train; 1,058 mules were purchased and forwarded to Fort Abercrombie, where the mules were broken, organized into trains, fitted with harness, and supplied with teamsters, under the direction of Captain Dandy, assistant quartermaster, during the months of April and May. This train consisted of two hundred and two 6-mule teams and wagons, nine spring-wagons, with four mules each, two 6-mule artillery teams, and twelve riding mules for the wagon-masters.

One 6-mule wagon and one 4-mule spring-wagon and their teams, and nine saddle-horses, were also supplied for the use of the scientific commission, which, under authority of the Secretary of War, accompanied the expedition into this wild country.

The organization of this train was a laborious and difficult work, and its completion in so short a time is creditable to the officer in charge.

The following is an extract from the annual report of Capt. G. B. Dandy, assistant quartermaster, Fort Abraham Lincoln, Dak., who organized the trains:

On the 21st of April I received instructions from the chief quartermaster of the department relative to organizing army-wagons for service with the proposed Yellowstone surveying expedition. I was at that time in charge of the depot of transportation at Fort Abercrombie, consisting of three hundred and sixty-five mules and seventy wagons, which was further increased by the addition of ten hundred and seventy-five mules and one hundred and sixty wagons to be organized and added to the depot-train.

On the 27th April the mules and wagons, with the necessary harness for fitting out one hundred and fifty 6-mule teams for service with the exploring and surveying party of the Northern Pacific Railroad west of the Missouri River, commenced arriving at

Digitized by Google

Breckenridge, Minn., fifteen miles from Fort Abercrombie. The last shipment of animals and material arrived on the 26th of May. The teamsters were hired in Saint Paul, with the exception of fifty hired on my recommendation at Fort Leavenworth, Kans. These latter were the only men sent me having any experience in the management of 6-mule teams, and many of the men employed at Saint Paul were vicious or worthless characters. About 25 per centum of the mules sent to me from Saint Louis were very wild, and required throwing or placing in the stocks to shoe. Many had to be thrown in order to harness them; and there were many other difficulties in the way of organizing this mass of raw men and material for efficient service in so short a time. The train, however, was completely shod and equipped and *en route* to the Yellowstone on the 29th May. It consisted of two hundred and two 6-mule teams, nine 4-mule teams for spring-wagons, two 6-mule teams for artillery, and some 12 riding-mules for wagon-masters. In addition, there were one 6-mule team, one 4-mule spring-wagon and team, and nine riding-horses provided for the use of the scientific party accompanying the expedition. Special attention was paid to fitting the train amply with spare parts, and blacksmiths', saddlers', and wheelwrights' supplies.

MODOC CAMPAIGN.

Summary of expenditures, indebtedness, &c.

Disbursements as reported by Captain Hoyt	$120,881 20
Ascertained indebtedness, as reported by Captain Hoyt	70,990 03
Transportation of 754,257 pounds from San Francisco, at 15 cents	113,138 55
Grain from Camp Halleck, consumed, cost at camp Halleck	5,000 00
Transportation of grain from Camp Halleck, consumed, rough estimate	25,000 00
	335,009 78

Items of expenditure not yet definitely reported to this office:

Cost of stores in San Francisco.

Cost of transportation of ordnance stores, &c., from Benicia arsenal; weight unknown.

Cost of transportation to Fort Klamath of over 200,000 pounds of grain and other supplies and stores remaining at the close of the campaign.

BARRACKS AND QUARTERS—MILITARY BUILDINGS.

During the year the construction of one hundred and twenty new buildings has been authorized, at an estimated cost of $245,544.87.

They are barracks for men, quarters for officers, stables, store-houses, guard-houses, bake-houses, &c. They are at military posts distributed through the following States and Territories: California, Louisiana, Florida, Michigan, South Carolina, North Carolina, Tennessee, Texas, Kansas, New York, Maryland, Oregon, Nevada, Kentucky, Georgia, Nebraska, Pennsylvania, Minnesota, Maine, Iowa, Connecticut, Virginia, Dakota, New Mexico, Montana, Washington, Arizona, Utah, Colorado, the Indian Territory, and the District of Columbia.

WHARVES.

The expenditure of $18,111.32 in repair and construction of wharves at various posts has been authorized.

REPAIRS.

Upon special estimates submitted to the Secretary of War, repair and alterations of military buildings to the amount of $228,796.49 have been authorized. Many small repairs, making in the aggregate a large sum, were also made under authority of local commanders, without special reference to the War Department for authority.

Digitized by Google

NEW POSTS ESTABLISHED.

The construction of two new posts in Arizona has been authorized—one near Tucson and one near the mouth of the San Carlos River. These posts are designed for garrisons of four companies each.

The orders of the Secretary required the labor of the troops to be employed when possible, and limited the expenditure upon the two posts to $35,000.

The post near Tucson is Camp Lowell; that on the San Carlos is New Camp Grant, and they take the places of Tucson Depot and Old Camp Grant, which latter was in a very unhealthy, malarious location.

Erection of huts for one company of infantry at Otter Crossing, on the line of the Northern Pacific Railroad, was authorized in October, 1872.

A post known at first as Fort Cross, now named Fort Seward, has been erected on the James River, Dak., on the line of the same railroad.

Fort Abraham Lincoln has also been built at the Missouri crossing of the railrod.

New posts have been commenced at Tulerosa, N. Mex., and at Beaver City, Utah.

New buildings, alterations, repairs, or additions have been authorized at posts in—

The Department of California, to cost	$48,640 96
The Department of Texas, to cost	44,143 19
The Department of the East to cost	75,207 27
The Department of the South, to cost	15,810 79
The Department of the Platte, to cost	51,012 51
The Department of the Gulf, to cost	42,360 66
The Department of the Columbia, to cost	9,490 00
The Department of Arizona, to cost	62,707 30
The Department of the Missouri, to cost	151,795 04
The Department of Dakota, to cost	78,120 96
The Department of the Lakes, to cost	839 00
Total	580,127 68

Of this sum, however, construction, repairs, &c., to the amount of $122,060, though authorized during the fiscal year, were ordered to be deferred until, after the 1st July of the present year, the new appropriation became available. The works, though needed, could not be executed with the appropriation of the past year.

FIRE-PROOF BUILDING AT JEFFERSONVILLE.

This building has been occupied. The stores, heretofore in wooden buildings scattered over a large space, in constant danger of fire and depredations, involving heavy expense for protection against both these dangers, have been all removed to the new building, properly classed and arranged for easy access, and safe against damp and fire.

An elevated reservoir, kept by a steam-pump constantly filled with water from a pool within the depot, affords the means, through pipes and hose, of instantly subduing any fire occasioned by incendiary attempts or by spontaneous combustion.

A single watchman in the tower has constantly in view the door of every store-room. The cost of watching and guarding the property is thus greatly reduced.

The old buildings have been demolished and the materials sold.

Digitized by Google

DEPOT BUILDINGS AT SAN ANTONIO.

In the act of 3d March, 1873, (sundry civil appropriation bill,) is an appropriation of $100,000 for erection of depot buildings at San Antonio, including shops, offices, and commissary and quartermaster storehouses, upon grounds presented to the United States by the city of San Antonio.

Under the instructions of the Secretary of War none of this appropriation has been drawn from the Treasury or expended.

The construction of this depot will be of great advantage to the military service, which now pays a rent bill of over $20,000 for various buildings for military purposes in the city of San Antonio.

HOSPITAL BUILDINGS.

The expenditures authorized for the repair and construction of hospitals have been as follows:

Fort Abercrombie, Dak	$82 24
Angel Island, Cal	190 00
Fort Barrancas, Fla	1,163 00
Fort Brady, Mich	350 00
Baton Rouge, La	4,689 50
Beale's Springs, Ariz	4,500 00
Camp Bidwell, Cal	400 00
Camp Baker, Cal	306 30
Fort Boise, Idaho	843 83
Fort Concho, Tex	1,800 00
Cheyenne Agency, Dak	500 00
Fort Duncan, Tex	2,500 00
Fort Ellis, Mont	300 00
Fort Foote, Md	215 17
Fort Gratiot, Mich	701 85
Fort Gibson, Ind. T	136 80
Fort Hamilton, New York Harbor	580 00
Fort Hays, Kans	2,000 00
Jackson, Miss	550 00
Jackson Barracks, La	1,157 50
Key West, Fla	4,490 10
Lower Brule Agency, Dak	420 00
Little Rock, Ark	1,192 40
Fort Laramie, Kans	189 14
Fort Leavenworth, Kans	580 00
Fort Laramie, Wyo	8,000 00
Fort Lyon, Colo	150 00
Fort McHenry, Md	250 00
Fort Mackinac, Mich	30 00
Camp Mojave, Ariz	4,000 00
McPherson Barracks, Ga	200 00
Fort Monroe, Va	250 00
Fort McIntosh, Tex	198 50
Fort Niagara, N. Y	150 00
Newport Barracks, Ky	7,000 00
Omaha Barracks, Nebr	205 37
Fort Porter, N. Y	481 00
Presidio, Cal	1,226 75
Fort D. A. Russell, Wyo	600 00
Fort Ripley, Minn	1,000 00
Fort Riley, Kans	134 00
Camp Supply, Ind. T	4,824 00
Fort Snelling, Minn	550 50
Fort Sullivan, Me	246 00
Savannah, Ga	1,870 00
Fort Sully, Dak	748 00
Fort Seward, Dak	4,000 00
Fort Selden, N. Mex	200 00

Fort Yuma, Cal	2,000 00
Total	77,754 70

BUILDINGS TRANSFERRED FROM THE QUARTERMASTER'S DEPARTMENT.

Seven buildings at Clark's Point, Me., and thirteen at Fort Washington, Md., have been transferred to the Engineer Department, and the State arsenal at Savannah, Ga., held by the United States since the occupation of that city by the army of General Sherman, has been given up to the State.

GROUNDS SURRENDERED, SOLD, ETC.

Under the act of 25th February, 1873, the land at Wilmington, Cal., occupied by the United States, was ordered to be reconveyed to those who had originally conveyed it to the United States; the buildings thereon erected by the United States being first removed or sold. The buildings have been sold at public auction, and the land will be duly restored to its original owners.

Application has been made for the restoration to the donors of certain lands at Omaha, originally conveyed to the United States in consideration of the sum of $10, for the purpose of erection thereon of headquarters' offices and quarters for the department staff. The site is not a convenient one for the purpose, and the matter of reconveyance is before the Secretary of War.

The barracks at Houlton being no longer in use the buildings were sold at public auction, and Congress, by act of March 14, 1872, authorized the Secretary of War to sell the site, reserving to the county of Aroostook so much thereof as may be necessary to preserve the meridian monuments thereon erected by consent of the War Department: *Provided*, The land so granted to the county shall not exceed in value $500. The land not thus reserved, amounting to nearly 25 acres, was duly sold at auction, on 19th June, 1873, for the sum of $350. A deed to convey the portion reserved, whose value is much less than $500, is before the War Department for execution.

The act (17 Stat., p. 614) for procuring title to sites of military posts in Texas, approved 3d March, 1873, has not yet enabled the Department to perfect any title. A board of officers is now in session in Texas for the purpose of endeavoring to execute the law. This office has furnished the board with copies of all records bearing upon the subject which can be useful to them.

ARTESIAN WELLS.

An artesian well sunk at Madison Barracks, N. Y., under authority given in October, 1870, is a success. It affords an unfailing supply of good water. Its depth is 99 feet; the cost was $550. Two more are needed, and their construction has been authorized.

By the law of June 8, 1872, the Secretary of War was authorized

Digitized by Google

expend $10,000, or so much thereof as might be necessary, in boring for water at Fort D. A. Russell, near Cheyenne Depot, Wyoming. The site of this post is on the dry plains, at the base of the Rocky Mountains, 6,000 feet above the sea-level.

As no one could be found willing to contract to sink a well to water in this unexplored soil, the tools were purchased by the United States, and a skillful and experienced person was employed to direct the operation. After boring to a depth of 410 feet through drift, the first well was abandoned, having caved in and injured its tubing to such a degree that it was considered cheaper to begin a new well than to attempt to sink the first deeper. The expenditure to the time this first well was abandoned was $8,195.38.

The new well has been sunk through the same strata to a depth of 717 feet, and the expense has amounted to $6,164.62. The last 152 feet of this well are in impervious strata of clay, and as there is a large extent of country within forty miles rising to a height of 2,000 feet above the site of the well, there is good ground for the hope that beneath these strata, impervious to water, a gravel or fissured rock, saturated with water, may be found.

The exploration will be of value, if successful, by showing that water can be obtained; and if unsuccessful, by preventing others from throwing away money in future. I have, therefore, advised that it be continued until the stratum is pierced, or until the difficulties of penetrating deeper become insuperable.

The expenditure thus far has been $14,360; but the cost per foot of the second well has been much less than that of the first. This is due to the knowledge gained in the first boring. Boring began on the 27th of November, 1872. On the 16th of May, 1873, at a depth of 410 feet, this well was abandoned. Expenditure to this date, $8,195.38. Second well begun on the 22d of March, 1873, and the following are the results:

Strata.	Depth of each stratum.	Total depth.	Date.
	Feet.	*Feet.*	
Gravel, clay, and sand	75	75	Mar. 31, 1873
Soapstone	20	95	April 1, 1873
Soapstone and mixture of fine gravel	65	160	April 4, 1873
Gravel and mixture of clay	50	210	April 5, 1873
Red shale	190	400	April 8, 1873
Red shale, with gravel and indurated clay	20	420	April 10, 1873
Granite	10	430	April 12, 1873
Soapstone	20	450	April 13, 1873
Soapstone, very soft	62	512	April 15, 1873
Gravel and quicksand	28	540	June 13, 1873
White indurated clay	18	558	June 30, 1873
Quicksand	7	565	Aug. 5, 1873
White indurated clay	15	580	Aug. 15, 1873
White indurated clay, a little harder	35	615	Aug. 19, 1873
White indurated clay, a little harder	52	667	Aug. 21, 1873
Blue clay	3	670	Aug. 21, 1873
Clay, black, with indications of coal	5	675	Aug. 23, 1873
Blue clay	18	693	Sept. 9, 1873
Clay	7	700	Sept. 13, 1873
Blue clay	17	717	Sept. 15, 1873

The sum of $14,360 has thus far been granted for artesian wells at this post. On September 6, 1873, it was reported that $13,000 had been expended. It is, therefore, reasonable to suppose that the balance of the funds ($1,360) has been, or was very nearly, exhausted by September 15, 1873; which would make the cost of the second well thus far $6,164.62.

Digitized by Google

POSTS ABANDONED.

During the year the posts of Taylor Barracks, Ky.; Old Camps G and Lowell, and Crittenden, Ariz.; and Fort Phœnix, Mass., have abandoned.

FIRES.

Some 5,000 buildings are under the care of this Department. M them are of rude and temporary construction, and very liable to fi Seven fires at military posts have been reported during the Such provision to contend against fires as it is possible to make a military posts has been made. The fire-extinguisher, which by a of sulphuric acid on a solution of bi-carbonate of soda in a close v throws a small stream of water some forty feet, has been extens distributed, and has saved a great quantity of property at mili posts. A small, portable hand force-pump, known as Johnson's, lately been tried in this city with such satisfactory results that it been adopted as a part of the fire-apparatus to be supplied to mili posts.

MILITARY RESERVES.

Seven military reserves have been declared by the Executive du the year: Fort Whipple, Va., 26th July, 1872; Camp Harney, O 2d December, 1872; Sibley Island, Dak., 11th February, 1873; Abraham Lincoln, 11th February, 1873; Fort Boise, Idaho, 9th A 1873; Beaver City, Utah, 12th May, 1873, and a reserve of timber for military purposes in Arizona, 20th June, 1873.

PUBLICATIONS.

A list of military posts, with short descriptions of the buildings, situation, and the resources of the vicinity, has been published and tributed.

A short tract on construction in pisé and in concrete, the for extracted from Cresy's Dictionary of Civil Engineering, the latter nished by the acting assistant quartermaster at Sidney Barracks, been also published and distributed. Both of these methods of build are better than adobe, and there are few locations in which the skilled labor of a garrison will not be sufficient to erect all necess walls of the quarters, store-houses, and stables in one of these sty with very little expense, if directed by intelligent officers.

The appropriation for barracks and quarters did not prove suffici to meet the urgent demands made upon it, and toward the close of fiscal year all new construction and repairs were arrested by orde the Secretary of War for want of funds. Still the rents and regu expenses which it was not possible to terminate have exceeded amount available and given rise to a deficiency estimate.

POST CEMETERIES.

As the wilderness is settled, the military posts on the old emigra routes are abandoned. At those occupied for many years are ce teries containing the graves of soldiers who fell in protecting the e grant from the savage, and the graves also of pioneers who lost th lives in settling the wilderness.

As the cost of properly and permanently inclosing these cemeter in some positions is very great, arrangements have been made to remo

Digitized by Google

the bodies. Those at old Fort Kearney and Sedgwick are to be removed to Fort McPherson, where they will be re-interred, and a permanent cemetery will be inclosed.

We have reports from 113 post cemeteries, which will be duly recorded and preserved.

NATIONAL MILITARY CEMETERIES.

The number of interments in the national military cemeteries by last year's report was 317,962. One hundred and forty-eight Union soldiers have been added to the list during the year. None have been removed. The number of the known is 170,187; unknown, 147,823.

A new national cemetery is being established at Fort McPherson, Nebr., to which the bodies of those who have fallen in the Indian fights of that frontier and been buried at neighboring posts, abandoned with the progress of settlement, are to be removed.

The cemetery established on the occupation of the city of Mexico by the Army of the United States has, under a law approved on 3d March, 1873, been designated a national military cemetery, and placed under the guardianship of the Secretary of War and subjected to the laws regulating other national military cemeteries. Reports and estimates of necessary improvements have been received from the consul-general of the United States, and their execution, approved by the Secretary of War, has been commenced. One of them is the sinking of an artesian well to supply water for irrigation, necessary in that dry and elevated position.

During the year brick-inclosing walls have been completed or are now building at the cemeteries of Newbern and Raleigh, N. C., Beaufort and Florence, S. C., and Memphis, Tenn.; stone walls at Danville, Glendale, Seven Pines, and Staunton, Va., at Salisbury, N. C., and Forts Leavenworth and Scott, Kans.

Superintendents' lodges have been completed during the year or are being erected at Danville, Glendale, and Seven Pines, Va., at Raleigh and Wilmington, N. C., Camp Nelson, Logan's Cross-Roads, and Lebanon, Ky., Memphis, Chattanooga, Fort Donelson, and Knoxville, Tenn., and at Fort Smith, Ark.

There remain to be provided for permanent inclosures at Andersonville, Ga., Fort Gibson, Indian Ter., Grafton, W. Va., and Fort McPherson, Nebr., and permanent lodges at Grafton, W. Va., Beverly, N. J., and Fort McPherson, Nebr.

The superintendents employed at the several cemeteries have had the aid of more labor during the past year, and an improvement in the keeping of the cemeteries is reported. The work of drainage is being prosecuted at those where it is most needed, as rapidly as the means allowed by Congress will justify.

A handsome stone gateway has been built at the Nashville cemetery, on the same design as that at Arlington, but of a local limestone of a different color.

Four civil engineers have been employed and stationed at central points in order to superintend the work of contractors upon permanent inclosures, and lodges and drainage, and to lay out such works.

HEAD-STONES.

The law of 3d March, 1873, (chapter 229, section 1, 17 Statutes,) appropriates $1,000,000 for erection of head-stones on certain conditions.

Digitized by Google

Advertisements and specifications, copies of which accompany this report, have been published. The Secretary had decided that the head-stones should be of white marble or granite, four inches thick, and of widths and lengths described in the specifications herewith.

The list of graves requiring head-stones does not embrace those not in separate national military cemeteries, nor the unknown at Salisbury, for which cemetery a special provision of law directs a single monument of granite to be erected. The difference in the printed list from the number herein reported is due to the omission of 12,112 at Salisbury, and of those buried in lots in city and village cemeteries not known as national.

On the 6th September, 1873, eighty bids, received in response to the advertisements, were opened in this office. The prices varied greatly, as did the material offered; but fourteen bids, understood to agree substantially with the specifications, appeared to come within the total sum of $1,000,000, to which the cost is limited by law.

All are still before the Secretary of War for award under the law. No decision has as yet been communicated to this office.

CLAIMS FOR QUARTERMASTER'S STORES, UNDER THE ACT OF 4TH JULY, 1864.

On 1st July, 1872, there were on file in this office 10,351 claims under this act, amounting to $6,857,006.56. One thousand nine hundred and sixty-three were filed during the year, amounting to $2,024,725.16. Total on file, 12,314, for $8,881,731.72.

Six hundred and forty-two have been reported to the Third Auditor for settlement during the year. Amount claimed, $615,212.42. The amount allowed on these is $296,775.90; less than 50 per cent. Three hundred and twenty-five have been rejected; amount, $443,689.75. Total disposed of, 967 claims, amounting to $1,058,902.17, upon which $296,775.90 only has been proved to be just and allowable under the law. At the same rate the 11,347 claims yet on file will be probably settled for about one-third of their face, and of the $7,822,829.55 which they claim, it is probable that about $2,600,000 will be proved to be justly due.

For detailed information in regard to several other classes of claims which come under the cognizance of the Quartermaster General, reference is made to the report of the assistant, Major Ludington, in charge of that part of this office.

Various tables and abstracts also accompany this report, which give information in the business of this office important to preserve for future reference.

CLOTHING AND EQUIPAGE.

The President of the United States having adopted a new uniform for the Army, its manufacture was begun by this office. But the appropriation made before the change of uniform, and based upon estimates looking to the use of material in store, was not sufficient to provide uniforms of the new pattern for 30,000 men. The manufacture and distribution were therefore arrested until, on the 1st of July, 1873, the appropriation of the present fiscal year became available. Nearly all the troops have now received the new uniform. The old-pattern clothing stored in the Philadelphia depot has, in compliance with the law, been sold at public auction, the sales amounting to $490,094.31. The surplus

Digitized by Google

of such clothing distributed at military posts throughout the country is being reported for sale as fast as the new uniform takes its place.

The sale of a large quantity of clothing stored at the Western or Jeffersonville depot, on the Ohio, is deferred until next season.

A great improvement in the shoes and boots of the Army has been made by the introduction of those whose sole is attached to the upper-leather by screws of brass wire. Reports are almost unanimous to the effect that these boots and shoes last longer, and are a better protection to the feet, than the sewed or pegged boots heretofore used.

Nearly all military posts have been supplied with single bedsteads; the head and foot trestles are of iron, supporting slats of wood, easily removable. They are much liked, are easily kept free from vermin, can be stacked in piles during the day so as to give room for circulation on the floors of the barrack-room, while at night they enable the men to sleep singly and thus put an end to much discomfort, unavoidable with the two and three story wooden bunks so long used in barracks.

MOTH AND MILDEW PROOFING—PROCESS OF GEORGE A. COWLES & CO.

The sum of $350,000, appropriated for the purpose by Congress, has been expended in treating the woolen and cotton material in store, according to the above process, in order to render it proof against moth and mildew. To complete its application to all material which will need it during the next fiscal year will require the sum of $100,000, for which an estimate has been submitted.

The appropriation for clothing and equipage for the past fiscal year was $900,000. The expenditures by this office were $858,412.07.

Forty-one thousand nine hundred and fifty-three dollars and thirty-three cents were transferred, by order of the Secretary of War, to the Ordnance Department, to which the manufacture and supply of knapsacks and haversacks has been transferred.

Four hundred and fifty-six thousand nine hundred and eighty-six dollars and eighty-two cents were received during the year from sales of clothing, including $18,832.56 derived from sales of clothing and material to officers for their personal use.

The National Asylum for Disabled Volunteers was entitled under the law to a large quantity of the old-pattern clothing. The president of the asylum obtained the authority of the Secretary of War to draw the equivalent of this clothing in shoes. One hundred and fifty-one thousand two hundred and forty-nine pairs of pegged shoes were delivered to the asylum from the stock in depot.

The clothing returns of officers of the Army are promptly examined and settled as received.

Full statements of the operations of the clothing and equipage branch of this office will be found at the close of this report, attached to the report of Major Bingham, quartermaster, on duty in this office during the year.

EXPLORING EXPEDITIONS.

The party under command of Lieutenant Wheeler, of the Corps of Engineers, engaged in the exploration of the territory west of the one hundredth meridian, has been supplied with animals, wagons, and forage, for transportation of escort, of supplies, and of its collections. Such quartermasters' stores as are needed by the civilians employed upon this expedition are sold to them at cost price.

Digitized by Google

The geologic and geographic exploration of Professor F. V. Hayden, United States geologist, has also been aided, under special authority of the Secretary of War, by sale of partially unserviceable animals and equipments.

The expedition for marking the boundary between the United States and Canada, west of the Lake of the Woods, under the charge of Commissioner Archibald Campbell, has also received aid and assistance from the Quartermaster's Department as heretofore.

During the month of November, 1872, under the order of the Secretary of War, I passed over the transportation routes from the East to the western end of Lake Superior and to the Red River of the North, at Fargo, the crossing of the Northern Pacific Railroad, and at Breckenridge, the terminus of the Saint Paul and Pacific Railroad. I had also intended to visit the depot of military transportation service on the Missouri River, then at Sioux City, as well as the crossing of the Missouri by the North Pacific, at Fort Abraham Lincoln; but I found the roads southwest of Saint Paul and west of the Red River blocked with snow and the routes impassable. I proceeded by the Kansas Pacific Railroad to Denver and to Cheyenne, and thence returned to this city. The extension of these roads greatly aids this department in its operations; but as the troops are moved further to the west and occupy posts within the mountain ranges, the total cost of transportation is not reduced. The field of operations is changed, but remains as extensive and as costly as before.

The officers who have been on duty in this office during the fiscal year are: Col. Robert Allen, who was on duty here during the whole of the preceding fiscal year, and was ordered, on the 11th March, 1873, to the headquarters Military Division of the Pacific, at San Francisco, where, since March 22, 1873, he has been on duty as chief quartermaster of that division.

Maj. J. D. Bingham has taken charge of those branches of the office (finance and inspection) vacated by this assignment of Colonel Allen, in addition to his former duties, except those of the cemeterial branch, to which, since June 25, 1873, Capt. A. J. McGonnigle has been assigned.

Maj. M. I. Ludington has continued on duty in this office.

All these officers have shown their usual zeal and intelligence in the performance of their respective duties, and their assistance has been very valuable.

The other principal stations of the Quartermaster's Department, during the fiscal year, have been filled as follows, viz:

Col. Robert Allen, assistant quartmaster general, chief quartermaster Military Division of the Pacific, at San Francisco, from March 22, 1873.

Col. D. H. Rucker, assistant quartermaster general, chief quartermaster Military Division of the Missouri, Chicago, Ill.

Col. Rufus Ingalls, assistant quartermaster general, chief quartermaster Department of the East, in charge of the general depot of the Quartermaster's Department at New York City, and, from 25th November, 1872, also chief quartermaster Military Division of the Atlantic.

Col. L. C. Easton, assistant quartermaster general, chief quartermaster Military Division of the Atlantic to 25th November, 1872, and in charge of the Philadelphia depot of the Quartermaster's Department—the principal depot of clothing and equipage of the Army—throughout the year.

Col. Stewart Van Vliet, assistant quartermaster general, from Oct

Digitized by Google

ber 18, 1872, chief quartermaster Military Department of the Missouri, at Fort Leavenworth.

Lieut. Col. S. B. Holabird, chief quartermaster Department of Texas.

Lieut. Col. James A. Ekin, chief quartermaster Department of the South; also, from September 26, 1872, in charge of the Jeffersonville depot of the Quartermaster's Department, and, from December 11, 1872, chief quartermaster Military Division of the South.

Lieut. Col. A. R. Eddy, on duty at the Philadelphia depot to August 17, 1872; from August 27 and 28, 1872, depot quartermaster at San Francisco, chief quartermaster Department of California, and chief quartermaster Military Division of the Pacific, of which last duty relieved by Col. Robert Allen on March 22, 1873.

Lieut. Col. Rufus Saxton, to May 28–31, 1873, chief quartermaster Department of the Columbia, at Portland, Oreg.; from June 23, 1873, chief quartermaster Department of the Lakes, at Detroit, Mich.

Maj. A. J. Perry, chief quartermaster Department of the Platte, Omaha, Nebr.

Maj. J. G. Chandler, in charge of depot at Fort Leavenworth, and, from July 1 to October 18, 1872, acting chief quartermaster Department of the Missouri.

Maj. C. G. Sawtelle, to July 15, 1872, chief quartermaster Department of California, and depot quartermaster at San Francisco; from August 15, 1872, to close of the fiscal year, assistant to the depot quartermaster at Philadelphia, and chief quartermaster third quartermaster's district Department of the East.

Maj. J. J. Dana, chief quartermaster Department of Arizona, at Prescott.

Maj. James M. Moore, from September 1, 1872, depot quartermaster at Cheyenne.

Maj. William Myers, in charge of depot, at Washington, D. C.

Maj. B. C. Card, to April 18, 1873, depot quartermaster at San Antonio; from May 1, 1873, chief quartermaster Department of Dakota, at Saint Paul.

Capt. E. B. Grimes, depot quartermaster at Saint Louis.

Capt. A. F. Rockwell, in charge of depot at Yuma, on the Colorado, Ariz., relieved Capt. J. G. C. Lee, who had completed a full tour of duty in Arizona.

Capt. C. H. Hoyt, in charge of general depot at Jeffersonville, Ind., to September 26, 1872, and of construction of buildings to November 21, 1872. From December 23, 1872, disbursing officer District of the Lakes, at Camp Warner, Oregon; from February 26, 1873, to close of the fiscal year, chief quartermaster of the Modoc expedition.

Capt. John F. Rodgers, military store-keeper at Jeffersonville, Ind., to April 8, 1873; from December 21, 1872, he was also on duty at the Philadelphia clothing depot, so remaining to the close of the year.

These officers have administered the offices of the Government committed to their charge with ability and zeal.

One assistant quartermaster, Capt. Henry Inman, was cashiered on July 24, 1872; one military store-keeper, Capt. N. D. A. Sawyer, was cashiered on November 30, 1872; and another, Capt. G. H. A. Dimpfel, was wholly retired on August 16, 1872.

Lieut. Col. C. H. Tompkins was suspended by sentence of a court-martial for one year from the 4th January, 1873.

The work of the Department, extending over the whole territory of the United States, has been satisfactorily conducted by the officers of

Digitized by Google

its establishment, aided by about three hundred subalterns from the line as acting assistant quartermasters.

The personal annual reports received from these officers among the records of the Department. They contain much information in relation to the wants and supplies of the ser bear testimony to the intelligence and fidelity of their writers acting assistant quartermasters, upon whom the burden of tl part of the detailed work of issue to troops and of care of pu plies falls in consequence of the insufficient number of office regular establishment, this office is much indebted. I hav elsewhere on the legislation which I believe to be necessary t justice, and to give them assistance much needed in the perfo their laborious and responsible duties.

The principal active operations which have taxed the reso the officers of this Department during the year, have been t tions against the Apaches in Arizona, who have been reduced of comparative quiet; the campaign against the Modocs in and Oregon, finally successful, and the organization and cond trains of the expedition to the Yellowstone, which made a march of seven hundred miles into an uncultivated and in g barren wilderness, and returned without serious loss of mat ing accomplished its purpose.

In connection with this expedition, the Yellowstone River w first time navigated by steamboats, which met the troops at tl ing near Powder River and rendered essential service.

In these important active operations, Lieutenant-Colonel E quartermaster Department of California, and Captain Hoyt, present with the troops in the Modoc campaign, Maj. J. J. D quartermaster Department of Arizona, Maj. B. C. Card, chie master Department of Dakota, and Capt. G. B. Dandy, who organized the Yellowstone train, rendered valuable service.

I have the honor to remain, very respectfully, your obedien

I.—*Report of Maj. J. D. Bingham, Quartermaster, U. S. A.*

QUARTERMASTER GENERAL'S OFFICE,
Washington, D. C., September 26, 1873.

GENERAL: I have the honor to submit a report of the operations of the inspection branch of this office during the fiscal year ended June 30, 1873.

The duties of this branch continue as specified in previous annual reports, and are principally as follows:

Keeping narrative reports of stations and duties of all officers who perform duty in the Quartermaster's Department.

Examining, and preparing for such action as may be requisite, proceedings of boards of survey, inventory and inspection reports, communications on assignments of officers and distribution of employés, and annual reports of officers.

Filing and distribution of orders, circulars, rolls of honor, and other printed documents.

Preparing monthly returns of officers of the Quartermaster's Department for the Adjutant-General's Office.

Keeping books of "letters received" and "letters sent" relating individually to officers, agents, and employés of the Department.

Digitized by Google

The following is an approximate statement of the number circulars, and books received and distributed during the fisca

	Received
General Orders, Quartermaster-General's Office	.....
General Orders, Adjutant-General's Office	116,900
General Court-martial Orders, Adjutant-General's Office	36,000
General Orders, Headquarters of the Army	4,200
Circulars	10,200
Roll of honor	2,000
Hints on horse-shoeing	.....
Regulations of the Quartermaster's Department	500
Miscellaneous	2,400

During the same period about 1,200 inventory and inspecti and 132 proceedings of boards of survey have been examined necessary, acted upon; 4,506 entries have been made in th "letters received," and 767 letters written and indorseme which are recorded in the corresponding book of "letters sen a much larger number recorded in books kept in other branc office.

I respectfully inclose herewith lists of officers on duty in th master's Department during the fiscal year.

Very respectfully, your obedient servant,

J. D. BINGH

Quartermaster, Bvt. Brig. Gen.,

The QUARTERMASTER GENERAL, U. S. A.

III.—*Report of Maj. J. D. Bingham, quartermaster, U. S. A.*

WAR DEPARTMENT,
QUARTERMASTER-GENERAL'S OFFICE,
Washington, D. C., October 1, 1873.

GENERAL: I have the honor to submit the following report of operations of the accounts branch of this Office for the last fiscal year:

Appropriations for periods prior to July 1, 1870.

On July 1, 1872, the balance of appropriations of the Quartermaster's Department in the Treasury, for years prior to July 1, 1870, undrawn, was, by report of last year		$2,290,164 71
Amount placed to the credit of appropriations during the year by deposits of funds for redistribution, and of amounts received from sales to officers of public property purchased prior to July 1, 1870		373,035 81
Amount expended for other departments, prior to July 1, 1870, and refunded by them during the last fiscal year		424,428 85
Total		3,087,629 37
Requisitions on settlements made at the Treasury of claims and accounts		1,449,743 37
Balance to the credit of appropriations for periods prior to July 1, 1870, remaining in the Treasury June 30, 1873		1,637,886 00

Appropriations for the fiscal year ending June 30, 1871.

Balance in the Treasury July 1, 1872		$272,862 25
Amount placed to the credit of appropriations during the year, by deposits of funds for redistribution, and of amounts derived from sales to officers of public property purchased during the year ending June 30, 1871.		8,374 55
Amount expended for other departments during the fiscal year ending June 30, 1871, and refunded by them during the last fiscal year		33,838 70
Total		315,075 50
Remitted to disbursing officers during the year on requests of the Quartermaster-General	$550 65	
Requisitions on settlements made at the Treasury of claims and accounts	55,019 45	
		55,570 10
Balance in the Treasury June 30, 1873		259,505 40

Appropriations for the fiscal year ending June 30, 1872.

Balance in the Treasury July 1, 1872, of amounts appropriated by acts of Congress approved March 3, 1871, and May 18, 1872		$99,863 39
Appropriation for deficiencies, act of Congress approved March 3, 1873		1,110,000 00
Transportation of insane volunteers, act of Congress approved May 18, 1872		1,000 00
Amount placed to the credit of appropriations during the year by deposits of funds for redistribution, and of amounts derived principally from sales to officers of public property purchased during the year ending June 30, 1872		331,024 32
Amount expended for other departments during the fiscal year ending June 30, 1872, and refunded during the last fiscal year		21,199 92
Total		1,563,087 63
Remitted to disbursing officers during the year on requests of the Quartermaster-General	$148,296 84	
Requisitions on settlements made at the Treasury of claims and accounts	384,078 67	
		532,375 51
Balance in the Treasury July 1, 1873		1,030,712 12

Digitized by Google

Appropriations for the fiscal year ending June 30, 1873.

Appropriations for fiscal year		$12,114,219 00
Appropriations for deficiencies, act of March 3, 1873		1,570,000 00
So much of the $200,000 appropriated by the act of March 3, 1873, for preservation of clothing and equipage from moth and mildew during the year ending June 30, 1874, as was used during the year ending June 30, 1873, the appropriating act rendering it available in that year		150,000 00
Amount placed to the credit of appropriations during the year by deposits of funds for redistribution, and of amounts derived principally from sales to officers of public property purchased during the year ending June 30, 1873		16,114 56
Amount expended for other departments and refunded by them during the fiscal year		25
Total		13,850,333 81
Remitted to officers for disbursement on requests of the Quartermaster-General	$13,365,188 96	
Requisitions on settlements made at the Treasury of claims and accounts	22,032 52	
Transferred to the Ordnance Department for the manufacture of knapsacks, haversacks, canteens, and great-coat straps	41,953 33	
		13,429,174 81
Balance in Treasury June 30, 1873		421,159 00

The accounts and vouchers which have been examined in this Office since the last annual report show disbursements as follows:

On account of appropriations for years prior to the fiscal year ending June 30, 1872	$1,843,605 13
For the fiscal year ending June 30, 1872	8,041,800 03
For the fiscal year ending June 30, 1873	5,638,632 94
Total	15,524,038 10

Appropriations are charged with these disbursements as follows:

1.—*Appropriations for the Quartermaster's Department.*

On hand unexamined July 1, 1873	.....	.....	.....	.....	.....	.....	.....	.....	.....	.....	.....	292	885	1,177

During the year two hundred and eight settlements have been made of officers' accounts under the act of June 23, 1870. The amount allowed by such settlement is $127,354.57.

The number of clerks employed in the accounts branch at the date of the last report was as follows: one of class 4, five of class 3, six of class 2, and forty-four of class 1; total, 56. The number now employed is as follows: one of class 4, four of class 3, six of class 2, and thirty-eight of class 1; total, 49.

The number of money accounts and property returns examined during the fiscal year is less than the number examined during the previous year. This is due to the increased work of examination, the increased number of settlements, under the act of Congress of June 23, 1870, and the transfer of a portion of the force to other branches of the office.

At this date I can say that all accounts and returns for years prior to 1873 have been examined; nearly all the accounts and returns for the first quarter 1873 have been examined; those of the second quarter are in the hands of the examiners, and the examination of those for the third quarter will be commenced before all are received from officers. The work of examination is, therefore, as near up to date as it can be.

Checks are now provided in this branch, by which double payments of accounts can be detected, except in the case of transportation accounts paid on bills of lading. When payment was made on the original bill of lading only, no other check was necessary; but now payment

Digitized by Google

can be made on the duplicate in case of loss of the original, and a double payment for the same service might pass the examination of this branch without detection.

It is suggested that officers who issue bills of lading be required to number them, and to enter on their "report of persons and articles hired" the number of each bill issued; name of carrier; destination; name of consignee; character and weight of articles, or any similar data by which the bills, when received here, can be identified.

Under section 2 of the act of February 12, 1868, a disbursing officer cannot use money appropriated for one purpose for any other. And under section 5 of the act of July 12, 1870, the appropriation made specifically for the service of any fiscal year can only be applied to the payment of expenses properly incurred during that year. These two laws, together with the custom that has grown up in this office of increasing the number of heads of appropriation, are now the cause of much embarrassment to the administration of the affairs of the Quartermaster's Department.

The following table shows the balances of appropriations undrawn by the Quartermaster's Department, July 1, 1873. They are embraced under fifteen different heads, and the accounts with them are kept in five sets of books. Each year adds another set of books in which another account is opened generally with the same heads of appropriation as in the previous year. In time the system will confuse and embarrass the records and business of this office:

Balances of appropriations undrawn by the Quartermaster's Department, July 1, 1873.

	Prior to July 1, 1870.	1870–'71.	1871–'72.	1872–'73.	1873–'74.
Regular supplies	$363,400 86	$82,068 05	$89,263 98	$1,688 55	$4,500,000 00
Incidental expenses	154,582 71	63,330 62	128,223 05	3,813 40	1,300,000 00
Purchase of horses	51,773 50	13,231 20	22,109 73	7,092 96	350,000 00
Barracks, quarters, &c	125,124 02	45,075 91	79,902 32	32,952 33	1,700,000 00
Transportation of the Army	801,844 32	8,597 38	684,684 14	156,541 92	4,492,096 50
Transportation of officers' baggage	29,882 66				
Clothing of the Army	76,312 66	47,180 55	26,498 90	4 53	1,045,037 92
Stoves	34,493 27	21 60	40 00		
National cemeteries					275,000 00
Clocks for permanent posts	522 00				
Hospitals				15,473 49	100,000 00
Expenses of sales				9,157 57	
Headstones				183,866 25	1,000,000 00
Monument at Salisbury, N. C				10,000 00	
Preservation of clothing					50,000 00
Total	1,637,936 00	259,505 40	1,030,712 12	421,191 00	14,812,134 42

There are now nine appropriations which are disbursed by the Quartermaster's Department, viz: regular supplies; incidental expenses; cavalry and artillery horses; barracks and quarters; transportation of the Army; clothing and equipage; erection and repair of hospitals; national cemeteries, and headstones for soldiers' graves.

Some quartermasters draw money from all of these appropriations; nearly all draw from four of them, to wit: for regular supplies, incidental expenses, barracks and quarters, and transportation of the Army.

Each officer doing duty in the Quartermaster's Department is required to make, monthly, an estimate of the funds required during the ensuing month, setting forth the exact number of men and animals for which he has to provide, the articles he requires, with the cost of each, and the persons and articles he must employ, with the rate of pay, and the total amount of money he requiries from each appropriation. When the money is received

Digitized by Google

he must expend it for the purposes for which he asked it, and for no other. He cannot, even temporarily, use money appropriated for transportation for paying for fuel. This often causes great embarrassment, as the exigencies of the service are constantly changing. An officer who makes an estimate of funds required for an ensuing month finds, when the money is received, that his wants are entirely different from what he expected they would be when he made the estimate. He asked, perhaps, for money to erect temporary shelter for troops, and has received it; but instead of going into quarters the troops are on the march, and instead of a sheltering fund he wants transportation money, of which he has none on hand. As he cannot use the sheltering funds on hand, great embarrassment ensues.

The quartermaster of a post garrisoned by infantry, where there are from four to six public animals, asks and receives funds to supply their wants. Suddenly and unexpectedly the garrison is increased by the arrival of cavalry. Forage, horse-shoes, horse medicines, &c., are wanted at once. The quartermaster has no funds to buy them with, and does not know whether any such funds are in the Treasury; therefore he cannot buy for cash and dare not buy on credit, as the law forbids any expenditure beyond the appropriation.

As the fiscal year draws to a close, and some of the appropriations are entirely drawn out of the Treasury, some of the officers of the Quartermaster's Department will have expended all of the funds in their hands belonging to such appropriations, while others will have a surplus; this necessitates transfers from one officer to another, often far apart and with infrequent means of communication. As the year draws still nearer to a close, the number of such transfers increases, until all the accounts are paid or the appropriations are exhausted.

Great delays in the payment of accounts frequently occur under the present system, which tend to increase the expenses of the department and oppress the creditors of the Government.

The same not only applies to a portion of the Army, but to it as a whole, as is shown by the condition of the appropriations for the last two fiscal years, during which the present system of accounts has been in operation. During the fiscal year 1871–'72, the expenses for barracks and quarters and incidental expenses were greater than anticipated, and notwithstanding the most earnest efforts to prevent it, those appropriations were exceeded. Last year the expenses on account of clothing, stoves, barracks and quarters, and incidental expenses were considerably greater than was anticipated when the estimate was made, and as a consequence the Department had no funds for supplying suitable clothing to the Army toward the close of the year, or for the purchase of stoves.

The present system of making estimates upon which the appropriations are based is one of long standing in the Quartermaster's Department; it is one that it is not thought best to change, as it is doubtless well for a department to send to Congress as detailed an estimate as possible.

In 1836 there were four appropriations for the Quartermaster's Department, viz, for clothing, various expenses, allowance to officers for transportation of their baggage, and for the transportation of troops. In 1837 the number of appropriations was increased by Congress to six, viz, clothing, regular supplies, barracks and quarters, transportation of troops, and incidental expenses. In 1848 the number of appropriations was increased by Congress to seven, a separate item being made for

Digitized by Google

cavalry and artillery horses, which had previously been included in the appropriation for incidental expenses.

But never, until July, 1870, were officers required to keep separate accounts with each appropriation. Officers in the field estimated for such amount of funds as they supposed they would want; the money was drawn from the Treasury and sent to them in a lump; and they used it without regard to—in fact did not know—the appropriation from which it was drawn. As long as the money held out they paid all proper expenses. When their accounts were rendered to the Quartermaster-General and the accounting-officers of the Treasury Department they were analyzed, and the amounts chargeable against the several appropriations noted on the vouchers, and entered on the books at the Treasury. It is true that under such a system of disbursement some appropriations might be overdrawn; but as the President then had power to transfer from one appropriation to another in the same department, the deficiency in one was made good by the surplus of another, so that no law was violated, the wants of the service were well supplied, and the total expenditure did not exceed the amount appropriated.

The power of the President to transfer from one appropriation to another, conferred by the act of March 3, 1809, was taken away by the act of February 12, 1868, and the Quartermaster's Department cannot return to the old system of disbursing without some authority of law.

Some relief from the present condition of affairs is demanded by the necessities of the service. The Department is now bound to disburse its money in strict conformity to the appropriations based on estimates made ten months before the year during which the money is to be expended begins. If the Army were a stationary force its expenses could be calculated beforehand in detail with a reasonable degree of certainty; but such is not the case.

The necessity of keeping, whenever possible, in the hands of each disbursing-officer, or subject to his draft, a considerable balance of each appropriation which he is likely to use, instead of a general balance applicable to all, increases the amount of money lying idle in the depositories, and subject to draft by disbursing-officers, and thus increases the remittances to them and lowers the balances in the Treasury available for remittances to the posts where actually needed.

The embarrassments indicated may be removed in two ways. First, by a slight change in making out the annual estimate of appropriations required for the Quartermaster's Department. Instead of appropriating for each head, as at present, arrange them as follows:

Digitized by Google

For general and incidental expenses of the Quartermaster's Department, to wit:	Dates of acts, resolutions, &c., authorizing or providing for the expenditure.	Reference to Statutes at Large, (Little, Brown & Co.'s edition.)	Estimated amount which will be required for each detailed object of expenditure.	Total amount to be appropriated under each head of appropriation.	Amount appropriated for the current fiscal year ending June 30, 1874.
		Vol. p. sec.			
For purchase of stoves for heating and cooking, of fuel for officers, enlisted men, guards, hospitals, store-houses, and offices; of forage in kind for the horses, mules, and oxen of the Quartermaster's Department at the several posts and stations, and with the armies in the field; for the horses of the several regiments of cavalry, the batteries of artillery, and such companies of infantry and scouts as may be mounted; and for the authorized number of officers' horses, including bedding for the animals; of straw for soldiers' bedding; and of stationery, including blank books for the Quartermaster's Department, certificates for discharged soldiers, blank forms for the Pay and Quartermaster's Departments, and for printing of division and department orders and reports. This will reduce the number of heads of appropriation to three, while the estimate, in all its details, is made precisely as heretofore.

Another method is by the passage of a law relieving disbursing officers of the Quartermaster's Department from the necessity of keeping separate and distinct accounts with each branch of the appropriation for the annual service of the Quartermaster's Department.

The change in the estimate may be made, I think, without recourse to law, as the system grew up in this Office without the requirement of law.

Very respectfully, your obedient servant,

J. D. BINGHAM,
Bvt. Brig. Gen. and Q. M., U. S. A.

The QUARTERMASTER-GENERAL OF THE ARMY.

IV.—*Report of Maj. J. D. Bingham, quartermaster, U. S. A.*

WAR DEPARTMENT,
QUARTERMASTER-GENERAL'S OFFICE,
Washington, D. C., October 2, 1873.

GENERAL: I have the honor to submit the annual report of the clothing branch of this Office for the fiscal year ending June 30, 1873.

The work connected with this branch of the Office has been as follows: Supplying clothing and camp and garrison equipage to the Army of the United States; the manufacture and purchase of such articles as were not on hand and required; the preservation of the large supplies of woolen garments, and materials for the manufacture of clothing, in store at the principal clothing depots; the sale of such articles of clothing and equipage as had become unserviceable and damaged being part of the large stock left on hand at the close of the late war; the examination and settlement of officers' clothing accounts, and examination of claims for clothing furnished to the United States forces during the war of the rebellion, not heretofore acted upon or presented to this Office.

The President of the United States having approved the recommendations of a board of officers convened by order of the Secretary of War to adopt a new uniform for the Army of the United States, this Office, in obedience to instructions from the War Department, made preparations to manufacture and purchase a complete outfit of the new uniform for the 30,000 enlisted men comprising the Army, with a view of having it ready for distribution on the 1st of December last. The appropriation not being sufficient for the purpose, the issue was postponed until the appropriation of this fiscal year should become available. In the mean time preparations were made for commencing the distribution of the clothing in July last, and nearly all the troops have now been supplied with the new uniform.

The regulations for the new uniform require that all troops shall wear the mounted overcoat. The stock of great-coats mounted being limited, the obtaining of a supply for foot-troops became necessary.

To prevent a loss to the Government, and with a view to utilizing the large supply of great-coats (foot) on hand, the Quartermaster-General recommended the issue of these overcoats after attaching to them mounted capes. The Secretary of War having approved the recommendation, these great-coats have since been issued with double capes,

Digitized by Google

and the result thus far shows that this arrangement has been of benefit to the Government, as well as to the enlisted men of the Army.

The iron bunks adopted for use of the Army have been supplied to nearly all the military posts. They appear to give general satisfaction. Thirty-four officers have reported upon them favorably, and nine unfavorably, the latter principally from a misunderstanding of the purpose of the bunk. Complaint having been made that the pine slats split too easily, instructions have been given to manufacture them of hard wood, such as oak or ash.

The brass-screwed boots and bootees heretofore issued in limited quantities are now being purchased and distributed to the whole Army. Sixty-two officers of the Army have, in their annual reports for the fiscal year, reported on them favorably; one thinks sewed shoes are better for the sand; and another that the soles should be of hemlock-tanned sole-leather.

The stock of blankets, stockings, and boots and shoes left on hand at the close of the war has become exhausted, or unserviceable from long storage. In procuring new supplies of blankets and stockings by contract, much difficulty has been experienced in obtaining articles of good quality, and equal to the standard.

The stock of dark-blue cloth and light-blue kersey will be so nearly exhausted this year that it will be necessary to purchase a supply next year.

In view of the difficulty of procuring articles of standard quality, I recommend that a few officers of the Quartermaster's Department be assigned to duty at the Philadelphia clothing depot, where most of the large contracts for clothing are made, in order that they may qualify themselves for the duty of inspecting the manufacture of such fabrics and articles as are contracted for at that depot. They should be furnished with necessary facilities; and when large contracts, such as for blankets, stockings, cloth, tents, &c., are given out, they should be assigned to the duty of watching the process of manufacture, in order to secure compliance with contracts, and insure the furnishing of articles equal to the standard.

After the officers first detailed for this duty become proficient, they should be replaced by others. By continuing this system the Department will always be supplied with officers capable of superintending the manufacture of the most important articles of the uniform.

I desire to call the attention of the Quartermaster-General to the following extracts from the annual report of Capt. John F. Rodgers, military store-keeper, United States Army, at the Philadelphia depot of the Quartermaster's Department, for the fiscal year ending June 30, 1873:

> The new uniform is in process of manufacture, and will shortly be issued. It is, in quality, appearance, and workmanship, vastly superior to the old. None but good cloth has been used, and the prices paid for making it have been sufficient to insure good work. The patterns are all better than those formerly used, and if the Army complains, the Quartermaster's Department need feel no remorse. The boots and bootees are unexceptionable; the iron bunks excellent. The foot dress-caps are admirable. I think, however, that the helmet needs some alterations to make it what is desired. The shell, *i. e.*, the felt, is almost too light; the disk on the crown should be broader to bear the heavy strain of the spear, plume, and socket, and the binding should be heavier and broader. It is the most sightly head-gear I have ever seen, but needs, in my opinion, the above.
>
> The uniform dress-coats are well made, of good shape, and will, I think, give satisfaction. One objection has already arisen, and will doubtless continue to be made. The "facings" are of bright cloth, beautiful at first, but likely to lose its freshness upon exposure. As some reports upon this subject are probable, I deem it proper to say that I have for several months been trying experiments with these cloths.

Digitized by Google

I have found *none*, either foreign or domestic, that are not fugitive in color. They all fade. The facing-cloth used for the present uniform is the best I have tried. It was purchased before I came to Philadelphia, and my experiments are disinterestedly impartial.

A new overcoat, or rather an adaptation of the old, has just been introduced in the Army from a design of the Quartermaster-General. It is an admirable garment, and should, and doubtless will, give great satisfaction to the Army.

Efforts have been made, and are still making, to raise the standard of all clothing and equipage to what it should be, and I think with success. I believe the issue will now compare favorably with those of former years, even to that "good old time" before the war.

The stock of woolen materials at this depot, and at Jeffersonville also, has been treated by the "Cowles & Co. process." The result is yet to be seen. I trust that it will prove of great service.

The $\frac{4}{4}$ dark-blue cloth will, in all probability, be exhausted within the coming year. I most respectfully recommend that sufficient time be taken to secure a good quality. It is the most expensive and requires more care in purchasing and inspecting than any other.

The $\frac{4}{4}$ sky-blue kersey will also be exhausted within a year in all probability. I do not think it will be necessary to purchase any of this width until the $\frac{3}{4}$ sky-blue kersey is exhausted Of the latter a sufficient quantity remains to make all the trousers and capes to overcoats that will be required during the present year. Of $\frac{4}{4}$ and $\frac{3}{4}$ dark-blue flannel enough remains to last at least two years.

All of the above has been carefully overhauled; the unserviceable laid aside for condemnation, and the balance carefully baled.

I again most respectfully call your attention to the careless estimates made by requiring officers. Requisitions for clothing are made apparently at hap-hazard, and often the sizes of boots, hats, caps, &c., are glaringly improper and incorrect.

One officer wanted, in an estimate for 499 pairs of bootees, $\frac{3}{7}$, $\frac{4}{1}$, $\frac{2}{12}$, $\frac{8}{3}$, $\frac{7}{4}$, and this for white troops. In 600 forage-caps he asks for $1\frac{3}{4}$, $1\frac{1}{2}$, and so through his estimate. This is but one of many, and causes the issuing officer great trouble and perplexity. A reference to the schedule of sizes will show how they should be issued. It also gives the purchasing officer great trouble, for it is impossible to obtain correct sizes to fit such estimates.

I respectfully recommend that a moderate proportion of coats, blouses, and overcoats be sent unmade. I believe it would save money to the Treasury and to the soldier, and prove satisfactory to all parties concerned.

Officers often expect to find clothing made similar to "custom-work," and not finding it, at once commence a crusade against the Quartermaster's Department, and particularly against the clothing branch.

The packing of clothing has been greatly improved within the last year. Dress-coats, boots, bootees, helmets, dress-caps, and forage-caps are boxed. Trousers, blouses, stable-frocks, shirts, bed-sacks, &c., are baled. The baling is much improved. A better quality of canvas is used, and it has two coats of paint given it before the bale is made. Such bales will bear rough carriage well, and, if exposed to rain or moisture, will keep their contents dry.

The expenditures on account of the moth and mildew proof process of Geo. A. Cowles & Co. during the fiscal year have been $350,000. This includes $200,000 appropriated for the current fiscal year, but made available for expenditure during last fiscal year. To prepare such articles of woolen and cotton fabrics on hand as have not yet been submitted to the process, an additional sum of $100,000 has been asked in the estimate for the coming fiscal year.

The appropriation for clothing and equipage for the past fiscal year was $900,000; $369.93 were deposited by officers to the credit of the appropriation, making a total of $900,369.93.

The expenditures on account of clothing and equipage during the same period were $858,412.07. The sum of $41,953.33 was transferred on the books of the Treasury to the appropriation for ordnance and ordnance stores, being the amount appropriated for the purchase of knapsacks and haversacks, which are now furnished to the Army by the Ordnance Department.

During the past fiscal year $456,986.82 were realized from sales of clothing and equipage, including $18,832.56 from sales of clothing, &c., to officers of the Army for their personal use.

Digitized by Google

To supply the Army with the necessary clothing and equipage during the coming fiscal year, it is estimated that an appropriation of $2,000,000 will be required. The large quantities of clothing rendered surplus by the adoption of the new uniform will be sold under the law of March 3, 1873, at public auction. The clothing on hand at the Philadelphia depot will be disposed of at auction on the 2d of October, (to-day,) and all the obsolete clothing in possession of officers at the various posts, garrisons, depots, &c., in the United States, will be disposed of in like manner as required by law.

The gross proceeds of these sales will be covered into the Treasury of the United States.

The large quantity of unserviceable clothing in store at the depot at Jeffersonville, Ind., will, under the orders of the Secretary of War, be kept in store till next year, in order to avoid throwing on the market at this time more property than can be disposed of with advantage to the Government.

It is expected that more money will be realized from these sales than will be required to supply the Army with the necessary clothing during the coming year.

Measures have been taken to embrace in the next annual report a complete statement of the number of articles sold under the law referred to, as well as the amounts obtained and turned into the Treasury.

Congress having by the passage of the act of January 21, 1873, granted to each of the inmates of the National Home for Disabled Volunteers one complete suit of clothing, the Secretary of War, at the request of the Hon. B. F. Butler, president of the board of managers, authorized the issue to the Home, in lieu of clothing, of an equivalent from the old stock of pegged bootees on hand. These bootees had, by long storage, become unfit for issue to troops in active service. The issue to the Home amounted to 151,249 pairs.

Twelve claims for clothing and equipage, amounting to $19,678.42, were received during the past fiscal year.

Six claims were referred to the Third Auditor of the Treasury with recommendation for settlement, amounting to $5,792.10.

Three claims, amounting to $8,209.86, were sent to the Third Auditor of the Treasury with recommendation that they be disallowed.

The examination of the clothing accounts of officers is being made as fast as they are received. During the fiscal year ending June 30, 1873, 3,647 returns were examined and transmitted to the Treasury Department for settlement, leaving but 376 awaiting examination in this Office.

Twelve clerks, two copyists, and two laborers have been employed, during the fiscal year, in this branch of the Office.

The following described statements accompany this report:

1. Statement showing, as far as can be ascertained from the records of this Office, the quantity of clothing, camp and garrison equipage, and clothing materials in the hands of officers of the Army, June 30, 1872; the quantity of clothing, camp and garrison equipage, purchased, manufactured, sold, lost, and issued to the Army of the United States during the fiscal year ending June 30, 1873, and the quantity remaining on hand for the supply of the Army at that date.

2. Statement of amounts received from the sale of surplus serviceable, unserviceable, damaged, and irregular articles of clothing, &c., sold at the principal clothing depots; also of the amounts derived from sales to officers during the fiscal year ending June 30, 1873.

3. Statement showing expenditures on account of clothing, camp and garrison equipage, during the fiscal year ending June 30, 1873.

Digitized by Google

4. Statement of the amounts received and expended by the Quartermaster's Department on account of clothing and equipage during the fiscal year ending June 30, 1873.

5. Statement showing number of claims received and acted upon during the fiscal year ending June 30, 1873, on account of clothing, camp and garrison equipage.

6. Statement of returns of clothing, camp and garrison equipage received, examined, and transmitted to the Treasury Department, and of letters received and written, during the fiscal year ending June 30, 1873.

Very respectfully, your obedient servant,

J. D. BINGHAM,
Quartermaster, U. S. A., Bvt. Brig. Gen.

Brig. Gen. M. C. MEIGS,
Quartermaster-General, U. S. A.

QUARTERMASTER-GENERAL'S OFFICE, *October* 2, 1873.

V.—*Report of Maj. M. I. Ludington, quartermaster, U. S. A.*

QUARTERMASTER-GENERAL'S OFFICE,
September 25, 1873.

GENERAL: I have the honor to submit the following report of the operations of the several branches of your Office under my charge during the fiscal year ending June 30, 1873:

INDEBTED RAILROAD COMPANIES.

At the close of the fiscal year ending June 30, 1872, there were due the United States from railroad companies which purchased railway material and rolling-stock under the provisions of Executive orders of August 8 and October 14, 1865, and for repairs to railroads, $4,734,442.43. During the fiscal year ending June 30, 1873, interest has accrued upon this indebtedness and expenses have been incurred to the amount of $101,573.95. Payments have been made and credited to the companies to the amount of $151,303.44.

On July 1, 1873, there remained an indebtedness of $4,658,924.07 to be collected, not including the sum of $25,788.87 due from the New Or-

Digitized by Google

leans and Ohio Railroad Company, which cannot be collected by reason of the company being bankrupt.

By referring to the report for the fiscal year ending June 30, 1872, it will be seen that during that fiscal year the debt increased $10,091.90. During the last fiscal year it has decreased in the manner indicated $75,518.36.

Accompanying this report there is a statement marked A, showing the original indebtedness of each company; the total increase on account of interest and expenses; the increase or decrease of the debt during the year; the payments made during the year; the total payments, and the balance unpaid July 1, 1873.

Four companies, the Alabama and Florida, the Indianola, now the Gulf, Western Texas and Pacific, the Mississippi and Tennessee, and the Pacific Railroad of Missouri—main stem—have discharged their indebtedness during the year.

Seven companies, the Alexandria, Loudon and Hampshire, the Alabama and Chattanooga, the East Tennessee and Georgia, the East Tennessee and Virginia, the Nashville and Chattanooga, the Nashville and Decatur, and the Southwest Branch Pacific Railroad of Missouri, reduced their indebtedness $94,339.02. These companies also paid on account of interest $1,756.62, making their total payments during the year $96,095.64.

The indebtedness of nine companies, the Edgefield and Kentucky, the Knoxville and Kentucky, the McMinnville and Manchester, the Mississippi, Gainesville and Tuscaloosa, the Mobile and Ohio, the Memphis, Clarksville and Louisville, the Memphis and Little Rock, the Nashville and Northwestern, and the Selma, Rome and Dalton, has increased $83,528.29. The companies have, however, paid to the United States during the year $15,976.40.

In addition to the amount stated to have been received and applied to the liquidation of this indebtedness, accounts for the transportation of the troops and property of the United States remain unadjusted, as follows, to wit:

Alabama and Chattanooga Railroad Company, in Treasury Department..	$149 42
East Tennessee and Virginia Railroad Company, in Treasury Department	19,529 90
East Tennessee and Georgia Railroad Company, in Treasury Department	8,084 74
Edgefield and Kentucky Railroad Company, in Treasury Department....	4 80
Mobile and Ohio Railroad Company, in Treasury Department.....	75,775 03
Mobile and Ohio Railroad Company, in Quartermaster-General's office—suspended	414 62
Memphis, Clarksville and Louisville Railroad Company, in Treasury Department.....	3,593 60

Total	142.253 79

When these accounts shall have been finally examined and adjusted, they will be placed to the credit of the respective railroad companies, thereby reducing the total indebtedness, as shown above, to $4,516,670.28.

There is also due for postal service rendered by these companies about $101,000, which, when paid over by the Post-Office Department, as contemplated by the seller and purchaser of the property, will still further reduce the debt.

Digitized by Google

In this connection your attention is invited to the necessity for Congressional legislation, or other authoritative action, to provide for the payment to this Department, at the end of each and every quarter, of all money due any indebted railroad company for postal service, until its indebtedness has been discharged, and notice to that effect given by the Quartermaster-General.

The necessity for such action is found in the following: Under the provisions of Executive Orders of August 8 and October 14, 1865, large quantities of railway material and rolling-stock, amounting in value to $4,665,061.16, were sold on credit to the railroad companies now indebted, on the express condition, among others, that all postal earnings of the several companies should be applied to the liquidation of the debts. Subsequent negotiations and agreements have recognized and affirmed this condition. The companies carry the mails, and the Postmaster-General, in settlement for the service, directs that the amount found due for it be placed to the credit of the Quartermaster's Department.

Before the Auditor of the Treasury for the Post-Office Department, whose duty it is to make payment for postal service, will place the money to the credit of the Quartermaster's Department, or, in other words, pay it over to this Department, he requires each railroad company, by an agent appointed by its board of directors, to give an order in favor of this Department for the amount due. Until such an order has been given the money remains as a part of the appropriations for the Post-Office Department, and is not transferred to the appropriations for the Quartermaster's Department; neither can it be placed to the credit of the railroad companies on the books of this office.

The Auditor holds that he has no authority to pay to the Quartermaster's Department money due for service rendered by these railroad companies without an order from them requesting that it be done, notwithstanding the fact that it was one of the conditions on which the property was sold that the money, when earned, should be placed to their credit, and notwithstanding the further fact that this office has urged that a contract, executed by this Department by order of the President of the United States, should be respected by the other Departments of the Government. In order, therefore, that the Auditor may pay the money to this Department, or rather more properly, issue his warrant therefor, so that a transfer of the money to the appropriations for this Department can be made, and the proper credit be given, some action by Congress, or other competent authority, seems to be absolutely necessary.

I have further to report that I am informed that under the act of July 12, 1870, sections 5 and 6, the money due for a portion of this service has been turned into the Treasury, so that, without a specific appropriation, the amount due for services prior to the time the moneys were so turned into the Treasury cannot be transferred to this Department and applied to the liquidation of the debt. There is, in fact, no money to be so applied.

Since the date of my last annual report, the suit against the Nashville and Decatur Railroad Company has been compromised and settled, under the act of March 3, 1871, (16 Stat., chap. 109,) for the sum of $70,000—$6,000 cash, balance payable in ten years from July 1, 1872, with interest at the rate of 5 per cent. per annum, payable semi-annually, on the first days of January and July of each year.

The indebtedness of the company to this amount is evidenced by its bond with interest coupons attached, and payment secured by a lien

Digitized by Google

upon all the property and franchises of the company, by guarantee of the Louisville and Nashville Railroad Company, and by decree of the United States circuit court, affirming the liability of the company, to be enforced by execution in case of default in making payment according to the terms agreed upon.

I cannot report any progress in the suits against the Nashville and Northwestern, the McMinnville and Manchester, and the Knoxville and Kentucky railroad companies during the year, though I have urged that they be brought to a hearing as soon as possible.

The suit against the McMinnville and Manchester Railroad Company has been postponed, at the request of counsel for the company, pending decision of the suit of that company against the Nashville and Chattanooga Railroad Company. The question of a longer postponement is now under consideration.

By reference to the table herewith it will be seen that the indebtedness of the Alabama and Chattanooga Railroad Company has been reduced to $3,980.02. Since the first of July I have received $2,775.55 on account of postal services rendered by the company, and the amount that will be due for services rendered during the third quarter of 1873 will more than liquidate its debt.

The Memphis and Little Rock Railroad Company has made no payments on its indebtedness during the year. It has carried the mails, but the amount due for that service is retained by the Auditor of the Treasury for the Post-Office Department, that officer declining to pay the money over to this Department, as required by the contract between the company and this Department, without an order from the company requiring it to be done, and the company refuses to give the order.

Learning some few months since that the road had been sold by decree of court under its second mortgage, I made inquiry of the United States district attorney for information upon that point and the advisability of bringing suit against the company to recover the amount due the United States. The district attorney in reply stated that the road was sold to Mr. Witt on the 17th day of March last; that he had been informed that measures were being taken to have the road sold under the first mortgage; that such a sale might embarrass the Government in making a collection, should it be compelled to collect it by distraint or suit; and that further delay of the payment of this debt is hazardous to the Government.

With these facts before the office, and the knowledge that the railroad company not only was not making any payments, but would not pay when it could, a statement of the case was submitted to the Secretary of War, with the recommendation that suit be instituted to recover the amount due. The recommendation was approved, and the papers have been sent to Messrs. Perry and Mathews, with instructions to bring suit at once.

In my annual report for the fiscal year ending June 30, 1871, I stated that "Arrangements had been made with the Selma, Rome and Dalton Railroad Company, under which payment of its debt is to be made in monthly installments of $1,000 each, in money, commencing on the 1st of October, 1871, and continuing for one year; thence for one year $2,000 per month, and thereafter $3,000 per month until the debt is discharged. In addition to the foregoing payments, all postal earnings and earnings from military transportation are to be applied to the payment of the debt."

It is now my duty to report that the company has failed to keep its written promise and agreement so far as the payment of the monthly

Digitized by Google

installments is concerned, or to show any intention to comply therewith. This is the more remarkable because the president of the company, in his letter asking that the company be permitted to pay its debt upon these terms, said he did it with the approval of the directors of the road, and that it was not his intention to submit a proposition which he could not fulfill—"knowing the honesty of my purpose, I trust the foregoing proposition will be accepted."

The company has carried the mails and furnished whatever transportation has been required. The amounts due for the transportation service have been, or will be so soon as the accounts can be settled, placed to the credit of the company; but the amount due for carrying the mails the past year has not been paid, because the Auditor refuses to pay without an order from the company, and the company refuses to give the order.

Further action, either by legislation or suit, is necessary to compel payment of this debt.

During the fiscal year I received from indebted railroad companies in money and postal dues $75,972.90, all of which has been deposited in the Treasury of the United States, and also credited upon their indebtedness.

TRANSPORTATION.

It is shown by reports of officers, so far as received, that the Quartermaster's Department transported by rail, water, wagon, and stage during the fiscal year 72,860 persons, 8,148 animals, and 164,125,223 pounds of material.

The remodeled system of transportation referred to in my last annual report, having been approved by the Hon. Second Comptroller, has been adopted and is believed to work satisfactorily and advantageously. It was published in General Orders No. 98, Adjutant-General's Office, series 1872. A copy of this order was transmitted to each railroad and other transportation company in the United States known to this office.

RAILROAD TRANSPORTATION.

The reports of officers show that 32,935 persons, 6,122 animals, and 76,649,739 pounds of material were carried by railroad.

Amount paid for railroad transportation as reported by disbursing officers of this Department	$555,198 28
Amount of accounts for similar service rendered during the fiscal year referred by this office to the Treasury Department for settlement	366,316 59
Total settlements for railroad-transportation service during the year	921,514 87

The records of this office show the transportation service performed by the Pacific Railroads for this Department during the fiscal year to have been as follows, viz:

Name of company.	Number of persons transported.	Number of animals transported.	Pounds of freight transported.
Union Pacific Railroad	6,166	1,763	21,697,106
Central Pacific of California	3,034	63	2,444,211
Kansas Pacific Railroad	1,951	390	5,711,947
Sioux City and Pacific Railroad	223	36	3,544,054
Total	11,374	2,252	33,397,318

Digitized by Google

The cost of service performed by the Pacific railroads during the fiscal year, so far as accounts have been received at this office, may be stated as follows:

Name of company.	Amount of accounts referred to the Treasury for settlement.	Amount of accounts rendered and under examination July 1, 1873.	Totals.
Union Pacific Railroad	$211,339 87	$48,536 48	$259,876 35
Central Pacific of California	70,186 23	32,262 84	102,449 07
Kansas Pacific Railroad	56,173 61	.....	56,173 61
Sioux City and Pacific Railroad	1,383 26	351 66	1,734 92
Total	339,082 97	81,150 98	420,233 95

At the date of this report all of the accounts for each month's service performed by these railroads, during the fiscal year, have not been received at this office, but taking the monthly average value of the accounts, already presented for settlement, as a basis, their total earnings during the year would be as follows:

Union Pacific Railroad Company	$445,501 00
Central Pacific Railroad Company	136,598 07
Kansas Pacific Railroad Company	149,797 00
Sioux City and Pacific Railroad Company	2,402 44
	734,298 51

By act of Congress approved July 2, 1864, (section 5,) one-half of the compensation for services rendered for the Government by those Pacific railroads that had received Government bonds in aid of their construction was required to be applied to the payment of the bonds so issued by the Government. The other half of their earnings was paid to the companies in cash, until the passage of the act of Congress of March 3, 1873, (section 2,) which directs the Secretary of the Treasury to withhold all payments to said railroad companies to the amount of payments made by the United States for interest upon bonds of the United States issued to said companies.

In view of the provisions of this law of March 3, 1873, the Quartermaster-General requested information from the Second Comptroller as to whether the earnings of these roads were still to be made a charge against the appropriation for the Quartermaster's Department, "appropriation for transportation of the Army."

The Acting Second Comptroller decided August 4, 1873, "That the moiety withheld from Pacific Railroads, under section 2 of act of March 3, 1873, although it be not paid to the railroads except in the event of a favorable judgment of the court, must be charged against appropriation of the Quartermaster's Department for transportation of the Army."

Therefore, although payment is withheld from the companies, the full amount earned by these roads is now, as before passage of act of March 3, 1873, to be taken from appropriation of the Quartermaster's Department for Army transportation.

WAGON AND STAGE TRANSPORTATION.

The transportation by wagon was as follows: 756 passengers, 32,004,635 pounds of freight.

Digitized by Google

The reports show the transportation by stage to have been 1,380 passengers and 3,648 pounds of freight.

Amount paid for wagon transportation as reported by disbursing officers of this Department	$977,753 94
Amount of accounts for service rendered during the fiscal year, referred by this office to the Treasury Department for settlement	189 50
Total for wagon-transportation service rendered during the year	977,943 44
Amount paid during the year for stage transportation as reported by disbursing officers of this Department	59,262 29
Amount of accounts for services rendered during the fiscal year, referred by this office to the Treasury Department for settlement	57 00
Total for stage-transportation service rendered during the year	59 319 29

Thirty-two contracts for wagon transportation were made during the year. The contract for wagon transportation from most convenient points on the Atchison, Topeka and Santa Fé, Kansas Pacific and Denver and Rio Grande railroads, to posts in the Department of Missouri, as also in the State of Texas, north of Red River and west of the 97th meridian, and Camp Apache, Ariz., from May 10, 1873, to March 31, 1874, was made at the rate of 90¾ cents per 100 pounds per one hundred miles. The average of the rate for this service during the previous contract year from points on the same roads was $1.17½ per 100 pounds per one hundred miles.

The existing contract rates for wagon-service in Texas show also a material reduction in the price per 100 pounds per one hundred miles, as compared with the contract rates for previous years.

The decrease of rates in the Department of Texas, as also in the Department of Missouri, is doubtless due in a great measure to the shortening of the distance of wagon travel consequent upon the rapid completion of the lines of railroad west and southwest toward the posts to be supplied, wherefore freighters, no longer subject to the delays and dangers of travel over the previous longer routes, can afford to transport stores at more reasonable rates per 100 pounds per one hundred miles.

A slight increase of rates generally over those of the previous year was paid under the contracts for hauling on the Pacific coast made during the year ending June 30, 1873.

WATER TRANSPORTATION.

There were carried by water for the Department during the fiscal year 37,789 persons, 2,026 animals, and 55,467,201 pounds of material.

The amount paid on account of this service by disbursing officers during the year, so far as was reported, was	$751,018 22
Accounts and claims for similar service rendered during the fiscal year, audited in this office and referred to the Treasury for settlement, amounted to	9,955 36
Total	760,973 58

The following vessels owned by the Government have been in service during the entire fiscal year, viz:

Steam-tug General A. A. Humphreys, employed at Boston.
Propeller General McPherson, employed at San Francisco.
Schooner Margaret, employed at Portland, Oreg.
Steam-launch Pulaski, employed at Fort Pulaski, Ga.

Digitized by Google

Schooner Matchless, employed at Fort Jefferson, Fla.

The cost during the year of running and maintaining these vessels owned by the Government was $37,413.19.

Twelve vessels of different kinds have, at various times as the necessities of the service required, been employed by charter or otherwise during the year at an expense of $43,056.76, which, together with cost of running and maintaining vessels owned by the United States, is included in the amount hereinbefore reported as having been paid on account of water transportation by disbursing officers of this Department.

Transportation appropriation and its disbursement.

Original amount appropriated for fiscal year 1872–'73	$4,000,000 00
Deficiency appropriation	500,000 00
Total	4,500,000 00

Recapitulation of expenditures made from appropriation for Army transportation up to July 1, 1873, for transportation service rendered during the fiscal year 1872–'73.

Kind of transportation.	Passengers	Freight.	Expenditures.	Total.
For railroad transportation	$595,344 33	$324,972 92	$1,197 62	$921,514 87
For water transportation, including expenses of running and maintaining Government vessels	192,193 64	515,305 35	53,474 59	760,973 58
For wagon transportation	577 46	924,732 50	52,633 48	977,943 44
For stage transportation	54,206 47	1,526 47	3,586 35	59,319 29
Total	842,321 90	1,766,537 24	110,892 04	2,719,751,18
For purchase of transportation animals; for purchase and repairing of Army and spring wagons, carts, harness, &c.; for hire of teamsters; for pumps and other apparatus to supply posts with water, estimated				1,350,000 00
Amount paid for building and repairing wharves, for digging wells, and for tolls				18,139 07
Grand total				4,087,890 25

Since the close of the fiscal year officers have made payments, and report an outstanding indebtedness to be met, the totals of which will absorb about all the balance of the appropriation, and to settle under the decision of the Second Comptroller of August 4, 1873, before referred to, the accounts of the Pacific Railroad for service during the year, now under examination at this office and to come in, a deficiency appropriation will probably be necessary.

Transportation accounts of previous fiscal years.

During the fiscal year accounts and claims for transportation service performed during the previous fiscal years were referred by this office to the Treasury Department for settlement as follows:

For railroad transportation	$450,799 80
For water transportation	130,108 20
For wagon transportation	62,781 77
For stage transportation	1,122 00
For miscellaneous transportation-claims, telegrams, &c	7,597 40
Total	652,409 17

REGULAR AND MISCELLANEOUS SUPPLIES.

CONTRACTS.

There were filed and examined in this office during the fiscal year 614 contracts, as follows: 230 for forage, embracing 5,664,734 pounds of oats or barley, 457,940 bushels of oats, 345,937 bushels of corn, 30,744 tons of hay, 439,000 pounds of bran; 6 for forage as required, 23 for both forage and fuel; 11 for straw, 2,508 tons; 30 for coal, 22,011 tons; 144 for wood, 84,022 cords; 2 for wood as required; 37 for charcoal, 49,075 bushels; 4 for the construction of quarters, 47 for transportation, 5 for miscellaneous services; 7 for horses and mules, 701 cavalry horses, 35 artillery horses, and 100 mules; 12 for clothing, camp and garrison equipage; 16 for national cemeteries, 3 for stationery, 36 leases, 1 charter party.

FORAGE, STRAW, AND FUEL.

The issues of forage and straw during the fiscal year were as follows: corn, 588,488 bushels; oats, 939,690 bushels; barley, 172,870 bushels; hay, 48,558 tons; fodder, 116 tons; straw, 3,292 tons; bran, 55,084 bushels.

The issues of fuel during the same period were: wood, 130,786 cords; anthracite coal, 16,937 tons; bituminous coal, 15,300 tons.

ANIMALS.

The following statements show the number of horses and mules purchased in the several military departments during the fiscal year ending June 30, 1873, with their total and average cost:

Cavalry and artillery horses.

Where purchased.	Number.	Total cost.	Average.
Department of the East	43	$10,777 50	$250 63
Department of the South	94	13,630 00	145 00
Department of Texas	370	49,010 00	132 46
Department of the Missouri	501	63,306 30	126 36
Department of the Platte	636	82,692 00	130 02
Department of Dakota	11	1,529 00	139 00
Department of California	254	27,966 00	110 11
Department of the Columbia	15	1,725 00	115 00
Depot of Washington	14	3,165 00	225 07
Total	1,938	253,800 80	.....

The amount appropriated for the purchase of cavalry and artillery horses for the fiscal year was $300,000. The money not expended has been directed to be turned into the Treasury.

Mules.

Where purchased.	Number.	Total cost.	Average.
Department of the East	1	$225 00	$225 00
Department of the South	27	4,774 94	176 85
Department of Texas	246	22,953 38	93 31

SUMMARY.

The following is a summary statement of the number of animals purchased, sold, died, &c., and remaining on hand during the fiscal ending June 30, 1873:

On hand, purchased, &c.	Horses.	Mules.	Oxen.
On hand July 1, 1872	9,729	8,758	117
Purchased	1,938	2,397	5
Taken up, &c	96	59	.....
To be accounted for	11,763	11,214	122
Sold	1,051	200	.....
Died	424	489	12
Lost and stolen	158	100	.....
Total sold, died, &c	1,633	789	12
On hand June 30, 1873	10,130	10,425	110

ESTIMATES AND REQUISITIONS.

Annual estimates for regular and miscellaneous supplies required during the fiscal year at the various posts within the Military Division of the Missouri were received, and instructions given as to method of providing the stores deemed necessary by the Quartermaster-General.

During the fiscal year requisitions for miscellaneous supplies were received as follows, and instructions given in relation thereto:

Military Division of the Pacific	4
Military Division of the Missouri	122
Military Division of the South	77
Military Division of the Atlantic	34
Depot of Washington	16
Military Academy at West Point	9
Miscellaneous sources	36
Total	298

FIRE-EXTINGUISHERS.

At the beginning of the fiscal year the fire-extinguisher known as the Babcock was generally in use at the various military posts, and up to

Digitized by Google

March 1, 1873, this pattern was supplied when called for and deemed necessary. Subsequent to that date the Champion fire-extinguisher, manufactured at Louisville, Ky., has been supplied at no greater cost. The use of the Babcock, however, has not been discontinued.

The Louisville company also manufacture an extinguisher having two cylinders, of a capacity of 150 gallons each, mounted on wheels, to be drawn by men or horses. Upon approval by the Secretary of War, one of these machines, supplied with 200 feet of hose and a force-pump, was ordered March 27, 1873, for Omaha Barracks, and one has since been ordered for Fort Brown, Texas.

Within the fiscal year fire-extinguishers have been supplied to the following posts:

Santa Fé, N. Mex., (Babcock)	8
Shelbyville, Ky., (Babcock)	2
Madison Barracks, N. Y., (Babcock)	3
Fort Mackinac, Mich., (Babcock)	1
Frankfort, Ky., (Babcock)	2
Fort Macon, N. C., (Babcock)	2
Charleston, S. C., (Champion)	2
Little Rock, Ark., (Champion)	3
Fort Gibson, Ind. T., (Champion)	4
Total	27

WARREN COOKERS.

Reference was made in the report of last year to experiments with the patent cooker invented by Capt. F. P. Warren, of the English navy, the results of which had not then been fully communicated to this office. Since that time reports have been received from numerous officers, some of whom speak highly of the merits of the cooker, while others do not consider its use desirable for the Army. In view of the difference of opinion expressed by officers the Quartermaster-General has not deemed it advisable to supply them for general use of the Army.

ARMY WAGONS.

The following is a statement of wagons, ambulances, and harness on hand in the Quartermaster's Department, United States Army, as shown by the last returns of officers received at this office:

	Serviceable.	Not serviceable.
Army wagons	3,107	88
Spring wagons	125	4
Ambulances	240	7
Wagon harness	23,411	633
Ambulance harness	2,148	29

For several years past the Army wagons, subjected to the hard usage of the service in the West, have been made to answer requirements only by frequent and extensive repairs. These wagons, as also the stock in store at depots, were bought during the war, and are therefore from eight to ten years old.

A careful inspection of those in store revealed the fact that the timbers of most of them were so unsound, from various causes incident to their age, as to be unfit for hard service upon the road.

From reports of inspection made by various officers it was found necessary that nearly all of the wagons in use in the Military Division of the Missouri should be replaced by new ones. For this purpose the

Digitized by Google

chief quartermaster of the division reported 480 new wagons needed. Accordingly 100 new wagons were bought in open market in Philadelphia, and 85 shipped during the spring months to the Department of Dakota, and 14 to the Department of the Platte, leaving to be shipped 381 wagons. In addition to these, and to meet the wants of the Yellowstone expedition, 150 new wagons were purchased at same place in open market and shipped to Fort Abercrombie, Dak. The cost of these 250 wagons, purchased in open market to meet an emergency, was $175 each.

By authority of the honorable Secretary of War, and after due advertisement, a contract was made July 12, 1873, by the depot quartermaster, Philadelphia, with the lowest bidder, for 300 Army wagons, at $149.50 each.

With approval of the Secretary of War, the purchase of 10 spring wagons for use at various posts and stations was authorized.

YELLOWSTONE EXPEDITION.

This expedition was organized to survey the line of the Northern Pacific Railroad through the country from the Missouri River to the Yellowstone, and westward in Montana. It entered the field in July, 1872, and was supplied by the Quartermaster's Department, under direction of the local military authorities, with needed means of transportation from stock on hand, with the exception of a number of hired teams.

At the close of the season's work of 1872 the commanding officer of the expedition reported that the transportation equipment furnished for service with the expedition was found unfit for active operations in the rugged country over which it was required to pass.

In order to facilitate the operations of the expedition during the present season, the Quartermaster-General, upon approval of the Secretary of War, directed the supply of new material, or such as was in every respect as good as new.

In addition to the number found suitable and supplied from the Department of Dakota, 150 entirely new wagons were furnished from Philadelphia. To complete the trains of the expedition there were purchased 1,058 mules, including 36 ambulance, 12 artillery, and 16 saddle mules. Such new harness and other articles as were necessary to thoroughly equip the trains were also purchased.

EXPLORING EXPEDITIONS.

By direction of the Secretary of War the surveying expedition west of the one hundredth meridian, under command of Lieut. George M. Wheeler, of the Engineer Corps, has, during the past fiscal year, been supplied with forage, animals, wagons, &c., for transportation of escort and its supplies, and various miscellaneous stores.

Sale was authorized to civilian employés, at cost price to Government, of such quartermaster's stores as they required.

Sales of partially unserviceable animals and quartermaster's stores were also, by approval of the Secretary of War, made to Prof. F. V. Hayden, United States geologist, for the continuation of his geological and geographical explorations in Colorado Territory.

Every facility consistent with laws and orders has, by authority of the War Department, been afforded by this Department to the expedition under direction of Mr. Archibald Campbell, American commissioner for the survey of the northwestern boundary.

IRON-HUB WHEELS.

The attention of this Office having been directed to the early decay of the Army wagons in the dry climates of Arizona and New Mexico, principally owing to the shrinkage of timbers, the Quartermaster-General, after correspondence with the officers of the Military Division of the Pacific, ordered the parts of 100 wagons to be gotten out in the rough at Philadelphia, and shipped to Arizona; these to be accompanied by iron hubs for the wheels.

In the early part of this year instructions were issued for shipment to Texas, New Mexico, Dakota, and Arizona of sample sets of certain patents of metal-hub wheels adopted in general mercantile use.

It was directed that the comparative merits of these wheels be tested by the use of one front and one hind patent hub wheel upon one side of the same wagon, with one front and one hind wheel of the regulation pattern on the other side; the results to be carefully noted and reported to this Office. No reports have yet been received.

HORSESHOES AND SHOEING MATERIAL, SMITHS' AND SADDLERS' TOOLS.

By General Orders No. 2, War Department, Adjutant-General's Office, January 2, 1873, the saddlers' tools and materials, the smiths' tools and materials, the tool-bags, and the mountain-howitzer forges, with their tools and materials, prescribed by General Orders No. 60, War Department, Adjutant-General's Office, June 29, 1872, for use of the cavalry service, were directed to be supplied by the Ordnance Department. Pursuant to this order the transfer of large quantities of these stores has been made to the Ordnance Department.

THE EPIZOOTIC.

During the fall of 1872, and extending into the spring of 1873, a horse epidemic, commonly called the epizootic catarrh, swept over the country, causing great destruction of animals.

The officers of this department adopted such remedies as their judgment and experience suggested, with, in general, the most successful results.

The chief quartermaster Department of the East published, in a circular dated October 28, 1872, a method for the treatment of the disease, with certain prescriptions for the cure of severe cases. Reports show that in many cases throughout the various military departments the disease yielded to this treatment.

In the month of January, 1873, the Secretary of War communicated the following simple preventive and remedy for the disease, which was made known at once to all officers of this department, with directions for its communication to all officers serving under their direction, having charge of public animals: "One teaspoonful chlorate of potash, twice a day to four horses; put in a pail of water, and let each horse drink its proportion." The losses of public animals by this disease, so far as reported to this Office, were very light. Much inconvenience was, however, occasioned to the transportation and cavalry service during the prevalence of the disease.

CAVALRY REMOUNTS.

In addition to the horses purchased as needed from time to time, a special remount of the several regiments of cavalry was authorized to be made early this spring. For this purpose purchase was authorized

Digitized by Google

of 1,200 horses, to be apportioned among the regiments as follows: First Cavalry, none; Second Cavalry, 175; Third Cavalry, none; Fourth Cavalry, 175; Fifth Cavalry, 150; Sixth Cavalry, 100; Seventh Cavalry, 150; Eighth Cavalry, 150; Ninth Cavalry, 150; Tenth Cavalry, 150.

The animals for the Second, Sixth, Seventh, and Tenth Regiments were ordered purchased in Missouri, Iowa, and adjoining States; those for the Fifth Regiment in California; those for the Fourth Regiment in Texas; those for the Eighth Regiment in Leavenworth and vicinity and Colorado Territory; and those for the Ninth Regiment at points to be designated by the commanding general, Department of Texas.

The purchases were ordered made by boards of officers, constituted by the department commanders. Each board was to have upon it a quartermaster and one or two officers of the regiment for which the horses were required; the boards to move from place to place, and after proper advertisement by posters, making known the days on which they would be at certain places, to purchase, not from "middlemen," but from "farmers and stock-raisers," the best horses presented in lots from one upward.

APPROPRIATION FOR REGULAR SUPPLIES.

The regular appropriation under this heading was	$4,000,000 00
The deficiency appropriation	310,000 00
Total	4,310,000 00

Information as to remittances made, and their classification, will be found in the annual report of the finance branch of this Office.

At the close of the fiscal year there remained in the Treasury but $1,685.55 to the credit of the appropriation. This balance, as also the funds then in hands of officers, will not be sufficient to meet the indebtedness of the year, and a deficiency appropriation will be necessary.

BARRACKS AND QUARTERS.

MILITARY BUILDINGS.

During the year the construction of one hundred and twenty new buildings has been authorized. They include barracks, officers' quarters, stables, store-houses, guard-houses, &c. They are at military posts in the States of California, Louisiana, Florida, Michigan, South Carolina, Tennessee, Texas, Kansas, New York, Maryland, North Carolina, Oregon, Nevada, Kentucky, Georgia, Nebraska, Pennsylvania, Minnesota, Maine, Iowa, Connecticut, Virginia, and in Territories of Dakota, New Mexico, Montana, Washington, Arizona, Utah, Colorado, Indian Territory, and District of Columbia. Their estimated cost was $245,544.87.

WHARVES.

Authority has been given for the construction and repair of wharves to the amount of $18,111.32.

REPAIRS.

Upon special estimates submitted to the Secretary of War, authority has been given to make repairs, alterations, &c., of public buildings, and for construction and repairs of cisterns, &c., at the various military posts to the amount of $228,796.49.

Digitized by Google

NEW POSTS.

Two new posts have been authorized during the year in Arizona—one at or near Tucson, and one near the mouth of the San Carlos River. These posts are for four companies each.

The estimated cost of these posts, as originally reported, was $53,000 for the former, and $54,609 for the latter; "$35,000 is the extreme sum which the Secretary of War authorizes to be expended for both. Labor of troops to be employed when possible." The former post is reported as being on the Rillito, about seven miles from Tucson, and is known as "Camp Lowell."

The hutting of one company of infantry at Otter Crossing, Northern Pacific Railroad, having been determined by the department commander as necessary and urgent, he directed the expenditure of $2,675 for the work; the season being advanced, would not admit of first submitting the subject to the War Department.

The division commander on investigation, considering the work "very necessary," directed that it be continued. Action and expenditure approved by the Secretary of War in October last, and funds remitted.

Sheltering for officers and men at James River Crossing, Northern Pacific Railroad, subsequently known as Fort Cross, and more recently as Fort Seward, was authorized in letter of division to department commander July 8, 1872. Remittance of $30,000 for this work was authorized by the Secretary of War. The construction of a provisionary hospital has since been authorized.

The division commander also, in a letter of July 10, 1872, to the department commander, authorized expenditure of $20,000 for shelter of men and officers at Tulerosa, N. Mex.; and the Secretary of War has since authorized remittance of the funds.

Reference was made in last annual report to the construction of posts at the Northern Pacific Railroad crossing of the Missouri River and at Beaver City, Utah. During the past fiscal year these posts have been partially constructed. That at Northern Pacific Railroad crossing of the Missouri is known as Fort Abraham Lincoln.

Recapitulation of the expenditures specially authorized for construction of new buildings at established posts; construction and repair of cisterns, miscellaneous repairs to buildings, construction of new posts and hutting troops, and how distributed.

Department of California	$48,640 96
Department of Texas	44,143 19
Department of the East	75,207 27
Department of the South	15,810 79
Department of the Platte	51,012 51
Department of the Gulf	42,360 66
Department of the Columbia	9,490 00
Department of Arizona	62,707 30
Department of the Missouri	151,795 04
Department of Dakota	78,120 96
Department of the Lakes	839 00
Total	580,127 68

Of this sum, constructions, repairs, &c., to the amount of $122,060, though approved by the War Department during the fiscal year, were not to be commenced, nor any expenditures incurred therefor, until after July 1, 1873, when the new appropriation became available.

The Secretary of War, on January 14, 1873, in a communication to

Digitized by Google

the House of Representatives, recommended an appropriation of $100,000 by Congress for rebuilding the post of Fort Griffin, Texas, in a manner suitable for the accommodation of six companies. No appropriation was made by Congress.

HOSPITAL BUILDINGS.

During the fiscal year, construction, repairs to, and alterations of military hospital buildings throughout the country have been authorized by the Secretary of War at a cost of $77,754.70; work to the amount of $10,916.75, though approved during the year, and included in the $77,754.70, was not to be commenced, nor any expenditure incurred, until the beginning of the new year.

The following list gives the locality of the hospitals and amount of expenditure authorized at each:

Fort Abercrombie, Dak., $82.24; Angel Island, Cal., $190; Fort Barrancas, Fla., $1,163; Fort Brady, Mich., $350; Baton Rouge, La., $4,689.50; Beale's Springs, Ariz., $4,500; Camp Bidwell, Cal., $400; Camp Baker, Cal., $306.30; Fort Boise, Idaho, $843.83; Fort Concho, Tex., $1,800; Cheyenne Agency, Dak., $500; Fort Duncan, Tex., $2,500; Fort Ellis, Mont., $300; Fort Foote, Md., $215.17; Fort Gratiot, Mich., $701.85; Fort Gibson, Ind. T., $136.80; Fort Hamilton, New York Harbor, $580; Fort Hays, Kans., $2,000; Jackson, Miss., $550; Jackson Barracks, La., $1,157.50; Key West, Fla., $4,490.10; Lower Brulé Agency, Dak., $420; Little Rock, Ark., $1,192.40; Fort Larned, Kans., $189.14; Fort Leavenworth, Kans., $580; Fort Laramie, Wyo., $8,000; Fort Lyon, Colo., $150; Fort McHenry, Md., $250; Fort Mackinac, Mich., $30; Camp Mojave, Ariz., $4,000; McPherson Barracks, Ga., $200; Fort Monroe, Va., $250; Fort McIntosh, Tex., $198.50; Fort Niagara, N. Y., $150; Newport Barracks, Ky., $7,000; Omaha Barracks, Neb., $205.37; Fort Porter, N. Y., $481; Presidio, Cal., $1,226.75; Fort D. A. Russell, Wyo., $600; Fort Ripley, Minn., $1,000; Fort Riley, Kans., $134; Camp Supply, Ind. T., $4,824; Fort Snelling, Minn.. $550.50; Fort Sullivan, Me., $246; Savannah, Ga., $1,870; Fort Sully, Dak., $748; Fort Seward, Dak., $4,000; Fort Selden, N. Mex., $200; Fort Shaw, Mont., $350; Fort Sanders, Wyo., $350; Thomas's Barracks, Ala., $500; Fort Union, N. Mex., $1,370.09; Fort Wadsworth, New York Harbor, $146; Fort Wingate, N. Mex., $3,818.16; Fort Wayne, Mich., $1,793.50; Fort Wood, New York Harbor, $75; Yerba Buena Island, Cal., $1,200; Yuma Fort, Cal., $2,000.

The appropriation for construction and repair of hospitals was $100,000.

At the close of the fiscal year there remained in the Treasury to the credit of appropriation for hospitals for 1872–'73, $15,473.49.

DEPOT BUILDINGS AT SAN ANTONIO, TEX.

In the act making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1874, and for other purposes, approved March 3, 1873, provision is made for the construction at this station of depot buildings, including shops, offices, and commissary and quartermaster's store-room, and appropriates $100,000 therefor. The Secretary of War, on March 24, 1873, directed the Quartermaster-General to "allow no action to be taken by any officer of the Quartermaster's Department looking to the erection of these depot buildings until further instructions." A copy of this order was communicated to the Department Quartermaster.

Digitized by Google

BUILDINGS, ETC., SOLD.

The sale of ninety buildings of various dimensions, together with fences, remnants of old iron bridges, &c., located at different places throughout the country, has been authorized.

BUILDINGS TRANSFERRED.

Seven buildings at Clark's Point, Mass., and thirteen at Fort Washington, Md., heretofore in charge of the Quartermaster's Department, have, by direction of the Secretary of War, been transferred to the custody of the Engineer Department.

The property known as the "State arsenal," at Savannah, Ga., held by the United States Government since the occupation of that city by the army of General Sherman, has, by direction of the War Department, been restored to that State.

LAND TO BE SURRENDERED, SOLD, ETC.

On October 31, 1863, February 12, 1864, and February 28, 1865, certain lands were conveyed by deed to the United States, in Wilmington, Los Angelos County, Cal., in consideration of $1.

A large number of buildings were erected thereon by the United States during the war, known as Drum Barracks and Wilmington Depot.

The United States not actually requiring the further use of the premises, Congress, under act approved February 25, 1873, directed the Secretary of War to reconvey said grounds to the original parties, after the removal or sale of the buildings, "as shall be most for the interests of the United States." Orders for the sale of the buildings have been issued.

In 1871, certain persons conveyed to the United States by a deed, (pronounced valid by the Department of Justice,) certain lands in Omaha, Neb., in consideration of the payment of $10.

It was at that time contemplated to construct permanent quarters and offices for department headquarters. Legislation since has prevented the construction of the buildings, and it has also been decided that the site is not a convenient one.

The parties who deeded the land have made application to have it restored to them, and reconveyance has been recommended by the Lieutenant-General of the Army and this office. The subject is awaiting the final decision of the Secretary of War.

On July 25, 1828, and January 13, 1829, the United States purchased of Joseph and Elmira Houlton certain lands at Houlton, county of Washington, State of Maine, for $639.21. The United States having no further use of the eighteen buildings which had been subsequently erected thereon, the Secretary of War directed that they be sold at public auction. The sale was made July 12, 1871, and $345.25 realized therefrom.

By act of Congress approved March 14, 1872, the Secretary of War was authorized to sell and convey this land, if in his opinion it should be for the interests of the Government to sell the same, reserving to the county of Aroostook so much thereof as was found to be necessary for the monuments therein erected, by the consent of the War Department, to establish a meridian line, which shall be granted to said county, provided that the land so granted shall not exceed in value the sum of $500. By direction of the War Department the division quartermaster was instructed to advertise and sell so much of this land as was con-

Digitized by Google

templated by the act of Congress, and to take proper steps with a view to the transfer of the remainder to the county of Aroostook. The site contemplated to be sold, containing 24 acres 74½ rods, was duly advertised by posters, May 19, 1873, and on June 19, 1873, was sold for $350 to Silas T. Plummer and Lewis B. Johnson.

The value of the land reserved from sale being greatly within the limit prescribed by the act of Congress, a deed conveying the land to the inhabitants of Aroostook County is now before the War Department for proper action.

The Quartermaster-General, in his last annual report, represented to the War Department the unfortunate condition of the tenure of the military posts on the frontier in Texas, and recommended that the attention of Congress be called to this subject, and that the Secretary of War be clothed with authority to purchase the sites of such military posts as are already, or as may be within a few years, established in Texas, at prices which he may determine to be just and reasonable, considering the value of the land before its occupation by the United States.

Congress, by act approved March 3, 1873, authorized the Secretary of War to purchase, at a fair price, (to be determined by a board of three officers to be appointed by him, whose report shall be subject to the approval or rejection of the President, and the confirmation thereof by Congress,) such lands in the State of Texas as may be necessary for the use of the United States for forts and military posts. (For full text of act see 17th Statutes, page 614.)

Since the close of the fiscal year a board of officers, as directed by the act, has been appointed by the Secretary of War, and copies of all papers in possession of this office, containing useful information relative to the sites occupied, have been furnished to be laid before the board.

ARTESIAN WELLS.

The sinking of the artesian well at Madison Barracks, N. Y., under authority given in October, 1870, has, from recent reports, proved a success. It affords an unfailing supply of good water, winter and summer. Its cost was $550, depth 99 feet. The sinking of two more of same depth, at a cost of $1,100, has been authorized.

Congress, on June 8, 1872, authorized the Secretary of War to expend the sum of $10,000, or so much thereof as may be necessary, for the purpose of sinking an artesian well on the Fort D. A. Russell military reservation, in the Territory of Wyoming.

The Secretary of War having directed, in August last, that steps be taken at once for the sinking of the well, and authorized the remittance of funds, the requisite instructions were accordingly issued to the division quartermaster. After boring through gravel, sand, clay, soapstone, boulders and rock to the depth of 410 feet, (76 feet having caved in,) and after expending $8,195.38 thereon without any promise of success, work was abandoned. With the remainder of the money a second well was commenced and had been sunk (up to May 2, 1873) to the depth of 275 feet. To continue the work the Secretary of War authorized a remittance of an additional $3,000.

POST CEMETERIES.

Authority has been granted by the Secretary of War, and instructions given by this office during the fiscal year, for erection of head-boards at the post cemetery at Fort Duncan, Tex.; board-fence for post ceme-

Digitized by Google

tery at Fort Winnebago, Wis., and completion of the adobe wall inclosing post cemetery at Fort Bliss, Tex.

In August last the Secretary of War directed the Quartermaster-General to make arrangements for the removal of the remains of such soldiers and their families as were buried in the cemeteries at the abandoned posts of Fort Arbuckle and Washita, to the national cemetery at Fort Gibson, Ind. T. Instructions were accordingly issued to the division quartermaster.

From the report received it appears there were one hundred and thirty-one graves at these posts and in their neighborhood. All of the graves were represented as being in bad condition, very few having any marks or stakes.

A contract was made in October last with the lowest responsible bidder to perform the work of disinterring, removing, and re-interring the bodies at the rate of $9.40 for each body, whole job to be completed by November 25, 1872.

In March, 1872, the War Department authorized construction of stone walls around the post cemeteries at Fort Kearney, Nebr., and Fort Sedgwick, Colo., but it afterward appearing that the cost thereof would be some $30,000, it was deemed more advisable to remove the remains of deceased soldiers and their families therein interred to some more permanent post, and the Secretary of War directed their removal, and re-interment at the cemetery at Fort McPherson, Nebr., distant about one hundred miles. The estimated cost of the work was $3,000, transportation being furnished by the United States.

The data on file in this office as to location of post cemeteries throughout the country, number of graves, names of deceased soldiers and others therein interred, &c., being of a very incomplete character, chief quartermasters have been requested during the year to supply the required information.

Reports covering one hundred and thirteen such cemeteries have thus far been received, and when all others have been heard from it is contemplated to have this important information recorded in a proper book of record for reference, &c.

POSTS ABANDONED.

During the year the War Department authorized the abandonment of the posts of Taylor Barracks, Ky., old camps Grant, Lowell, and Crittenden, Ariz., Fort Phœnix, Mass., and Fort McRae, N. Mex.

FIRES.

Seven fires have been reported during the fiscal year.

The barracks at Fort Phœnix, near New Bedford, Mass., were destroyed on August 27, 1872.

Two mills at Fort Buford, Dak., were destroyed November 5, 1872.

One set of company quarters, 100 feet by 15 feet, with kitchens, 20 feet by 15 feet, at Fort Saint Philip, La., were destroyed November 15, 1872.

One set of officers' quarters at Fort Stockton, Tex., were destroyed, together with a few articles of quartermaster's stores, on November 17, 1872.

A fire occurred in one of the two-story brick barracks, 182 feet by 34 feet by 30 feet, at Baton Rouge, La., November 18, 1872, destroying all the wood-work, &c. Repair of this building has since been authorized.

Digitized by Google

On January 28, 1873, a fire occurred at the Saint Louis arsenal-depot, Mo., which completely destroyed the commissary and quartermaster's store-house, together with property belonging to the Quartermaster's Department therein stored.

The commanding officer's quarters at Camp Halleck, Nebr., were destroyed by fire June 23, 1873. The adjoining quarters were badly damaged from the intense heat.

RESERVATIONS.

Seven reservations have been declared by the President during the year, viz: Fort Whipple, Va., July 26, 1872; Camp Harney, Oreg., December 2, 1872; Sibley Island, Dak., February 11, 1873; Fort Abraham Lincoln, Dak., February 11, 1873; Fort Boisé, Idaho, April 9, 1873; Beaver City, Utah, May 12, 1873; certain timber-lands in Arizona Territory, June 20, 1873.

PUBLICATIONS.

In 1872 the Secretary of War authorized the publication, for information of officers of the Army, of "Outline-descriptions of United States military posts and stations," compiled from information furnished by division commanders and quartermasters. The work gives, in a succinct form, location of posts; number, description, and condition of buildings; nearest supply-depot; resources; communications; description of country, &c. The information therein contained is valuable to officers and to this office. Military bureau officers, department and division commanders, regular quartermasters, and each arsenal and garrisoned post have been provided with a copy thereof.

The Secretary of War, on recommendation of this office, authorized to be published, for the information of officers on duty in the Quartermaster's Department, certain extracts from Creecy's Encyclopedia of Civil Engineering, relative to the durability of Pisé walls, and the mode of building in Pisé, together with the descriptive notes on the manner of constructing concrete walls, furnished by the acting assistant quartermaster at Sidney Barracks, Nebr., where a building for laundresses' quarters was constructed, last summer, of this material. On personal inspection by the Lieutenant-General of the Army, this mode of construction was strongly recommended by that officer for barracks and quarters west of the Missouri River. It is believed one or the other of these methods of building is applicable at nearly every military post or station on the frontier, and that either is cheaper than adobes. A copy of these extracts has been furnished to all officers of this Department.

APPROPRIATION FOR BARRACKS AND QUARTERS.

The amount of the regular appropriation for barracks and quarters was	$1,250,000 00
For amount of the deficiency appropriation	250,000 00
Total	1,500,000 00

Information as to remittances made and their classification will be found in annual report of the finance branch of this office.

At the close of the fiscal year $31,488.93 of the appropriation for barracks and quarters remained undrawn at the Treasury. This balance, as also funds then in hands of officers, will be absorbed in payment of outstanding indebtedness for materials, rents, hire of mechanics, &c., &c., and, in addition, a deficiency appropriation will probably be necessary to meet the expenses of the year.

CLAIMS.

The following statements exhibit the number of transportation claims and accounts, and claims under act of July 4, 1864, and miscellaneous claims on hand, July 1, 1872, received and acted upon during the year, and remaining on hand June 30, 1873:

Statement of accounts and claims in the transportation division, Quartermaster-General's Office, for the fiscal year ending June 30, 1873.

	No.	Value.	No.	Value.
Number of accounts and claims on hand July 1, 1872	156	$277,644 45		
Number of accounts received during the fiscal year	624	1,299,290 39		
Number of claims received during the fiscal year	458	387,331 69		
Total number of accounts and claims on hand and received			1,238	$1,964,266 53
Number of accounts referred for settlement during fiscal year	571	814,622 56		
Number of claims referred for settlement during fiscal year	373	214,305 06		
Number of claims transferred to other branches	9	512 89		
Number of claims rejected during the fiscal year	65	318,429 55		
Number of claims suspended at close of fiscal year	8	3,002 75		
Total number of accounts and claims referred, rejected, and suspended			1,026	1,350,872 81
Number of accounts awaiting action July 1, 1873	68	471,198 80		
Number of claims awaiting action July 1, 1873	144	142,194 92		
Total number and amount	212	613,393 72	212	613,393 72

Statement of claims under act of July 4, 1864, chapter 240, in the Quartermaster-General's Office, for the fiscal year ending June 30, 1873.

	No.	Amount.	No.	Amount.
On hand July 1, 1872, which had previously been suspended or had received no decisive action	10,351	$6,857,006 56		
Received during the year	1,963	2,024,725 16		
Total number on hand and received			12,314	$8,881,731 72
Decisive action taken during the year:				
Approved	642	296,775 90		
Reductions on claims approved		318,436 52		
Rejected	325	443,689 75		
Total upon which final action has been taken			967	1,058,902 17
Remaining on hand June 30, 1873			11,347	7,822,829 55

Statement of miscellaneous claims in the Quartermaster-General's Office for the fiscal year ending June 30, 1873.

	No.	Amount.	No.	Amount.
On hand July 1, 1872, which had previously been suspended or had received no decisive action	14,485	$7,558,791 93		
Received during the year	3,375	785,480 63		
Total number on hand and received			17,860	$8,344,272 56
Decisive action taken during the year:				
Approved	3,261	654,389 15		
Reductions on claims approved		38,462 72

The following is a statement of the public funds in my possession during the fiscal year:

On hand July 1, 1872	
Received from officers during the year	$674,355 15
Received from the Treasury Department during the year	162,265 39
Received from sales of railway property and other sources	76,432 82
Total received during the year	913,053 36

Disbursed during the year	$70,186 48
Transferred to other officers during the year	766,371 61
Deposited to the credit of the Treasurer of the United States during the year	76,495 27
Remaining on hand June 30, 1873	
Total disbursed, &c., during the year	913,053 36

Submitted herewith are certain abstracts and statements, to which attention is invited, for information in detail relative to the several subjects of this report. They are as follows:

A.—Statement of the indebtedness to the United States of southern railroad companies on account of purchase of railway material for the fiscal year.

B.—Statement of all troops and stores transported under direction of the Quartermaster's Department during the fiscal year.

C.—Abstract of contracts made by officers of the Quartermaster's Department for wagon transportation during the fiscal year.

D.—Abstract of contracts made by officers of the Quartermaster's Department for water transportation.

E.—Statement of vessels chartered and employed by officers of the Quartermaster's Department during the fiscal year.

F.—Statement of vessels owned or purchased by the Quartermaster's Department during the fiscal year.

Very respectfully, your obedient servant,

M. I. LUDINGTON,
Quartermaster, U. S. A.

Brig. Gen. M. C. MEIGS.
Quartermaster-General, U. S. A.

VI.—*Report of Capt. A J. McGonningle, assistant quartermaster, U. S. A.*

WAR DEPARTMENT,
QUARTERMASTER-GENERAL'S OFFICE,
Washington, D. C., September 22, 1873.

GENERAL: I have the honor to submit the following report of the operations of the cemeterial branch of this office during the fiscal year ending June 30, 1873.

The number of interments in the national cemeteries reported last year, 317,962; the number of bodies of Union soldiers since interred in the cemeteries, 148; number removed by friends, none; remaining in the cemeteries, 318,110; the number of known, 170,287; unknown, 147,823.

On the 5th of December, 1872, the Secretary of War directed the establishment of a national cemetery at Fort McPherson, Nebr., and the removal thereto of the remains interred at Forts Sedgwick and Kearney.

By act of Congress approved March 3, 1873, the American burial-ground near the city of Mexico was designated a national military cemetery.

The appropriation for national cemeteries for the year ending June 30, 1873, was $250,000, of which amount the sum of $527.03 remained undrawn in the Treasury at the end of the fiscal year.

The following work has been done during the year: Brick walls have been erected or are now being erected around the following cemeteries viz: New Berne and Raleigh, N. C., Beaufort and Florence, S. C., and Memphis, Tenn.; stone walls around the following cemeteries, viz: Danville, Glendale, Seven Pines, and Staunton, Va., Salisbury, N. C., and Forts Leavenworth and Scott, Kans.

Superintendents' lodges have been or are now being erected at the national cemeteries at Danville, Glendale, and Seven Pines, Va., Raleigh and Wilmington, N. C., Camp Nelson, Logan's Cross-Roads, and Lebanon, Ky., Memphis, Chattanooga, Fort Donelson, and Knoxville, Tenn., and Fort Smith, Ark.

At the following national cemeteries permanent inclosures are required, viz: Andersonville, Ga., Fort Gibson, Ind. T., Grafton, W. Va., and Fort McPherson, Nebr.

At the following national cemeteries permanent lodges are required, viz: Grafton, W. Va., Beverly, N. J., and Fort McPherson, Nebr.

During the past fiscal year the grounds at all the cemeteries have been kept in good order, and permanent improvements, such as drainage, wells, cisterns, and green-houses added, as the means at command would allow.

A handsome arched gateway, similar to the one erected at the Arlington, Va., national cemetery, has been built at the Nashville, Tenn., national cemetery.

The Antietam national cemetery has not yet been transferred by the cemetery association to the United States.

Four civil engineers are employed by this Department, with stations at Washington, D. C., Raleigh, N. C., Nashville and Memphis, Tenn., whose duty it is to inspect and report upon all permanent work going on at the cemeteries, mark the lines for the walls, and determine the sites for the lodges.

By an act of Congress approved March 3, 1873, $1,000,000 were appropriated for the erection of a head-stone at each grave in the nat-

Digitized by Google

military cemeteries, to be made of durable stone and of such design and weight as shall keep them in place when set. The act further provides "that the contract shall be awarded by the Secretary of War after sixty days' advertisement in ten newspapers of general circulation, and the Secretary of War shall first determine for the various cemeteries the size and model for such head-stones, and the standard of quality and color of the stones to be used."

A copy of the advertisement inviting proposals accompanies this report, together with a copy of the published specifications in detail, the standard fixed by the Secretary of War.

The list which accompanies the latter is intended to exhibit only the number of graves at each cemetery which require head-stones, and does not include those for which head-stones or monuments have already been provided, nor the number of unknown remains in the Salisbury cemetery over which one monument is to be erected. Hence the discrepancy between the totals stated in that list and the total number of interments as given in this report.

By an act approved March 3, 1873, the sum of $10,000 was appropriated for a monument at the Salisbury, N. C., national cemetery, wherein lie the remains of 12,112 men, most of them not identified. Several artists have been invited to submit designs for such a monument. Three designs have been received thus far.

Superintendents are required at sixty-six national cemeteries. Seven were appointed during the year, one died, and one was discharged; sixty-five remained on duty at the close of the fiscal year.

Very respectfully, your obedient servant,

A. J. McGONNIGLE,
Captain and Assistant Quartermaster, U. S. A.

Brig. Gen. M. C. MEIGS,
Quartermaster-General, U. S. A.

Proposals for head-stones for national military cemeteries.

WAR DEPARTMENT,
QUARTERMASTER-GENERAL'S OFFICE.
Washington, D. C., June 27, 1873.

Proposals are invited for furnishing head-stones for the national military cemeteries as prescribed by the law of 3d March, 1873, of which the following is an extract:

"*Provided*, that the head-stones required by an act entitled 'An Act to establish and protect national cemeteries,' approved February 22, 1867, and the act amendatory thereof, approved June 8, 1872, shall be of durable stone, and of such design and weight as shall keep them in place when set; and the contract for supplying the same shall be awarded by the Secretary of War, after sixty days' advertisement in ten newspapers of general circulation, to some responsible person or persons whose samples and bids shall in the greatest measure combine the elements of durability, decency, and cheapness; and the sum of one million dollars is hereby appropriated for said purpose out of any money in the Treasury not otherwise appropriated; and the Secretary of War shall first determine for the various cemeteries the size and model for such head-stones, and the standards of quality and color of the stone to be used, and bids shall be made and decided with reference thereto; and contracts may be made for separate quantities of such head-stones; and the contracts made under this act shall provide for furnishing and setting all the said head-stones, and shall not in the aggregate exceed the sum hereby appropriated."

The total number to be furnished is estimated at *253,088 for the known, 147,694; for the unknown, 105,394.

---

* These figures could only be estimated when the advertisement was prepared, as full reports from some officers in charge of cemeteries had not then been received; hence the discrepancy existing between the above figures and the total number in list accompanying the specifications, the latter having been corrected from reports received after the advertisement had been prepared.

Digitized by Google

Specifications, describing in detail the standard fixed by the Secretary of War, can be had on application by letter to this Office, where also a specimen will be placed on exhibition within a few days.

Proposals should be in sealed envelopes, marked: "Proposals for head-stones for national military cemeteries," and addressed to the Quartermaster-General of the Army, in whose Office they will be opened, in presence of bidders, on Saturday, September 6, 1873, commencing at 11 o'clock a. m.

By order of the Secretary of War.

M. C. MEIGS,
Quartermaster-General, Bvt. Maj. Gen., U. S. A.

Official copy.

A. J. McGONNIGLE,
Capt. and Assistant Quartermaster, U. S. A.

WAR DEPARTMENT,
QUARTERMASTER-GENERAL'S OFFICE,
Washington, D. C., August 15, 1873.

Mr. ——— ———,

SIR: In addition to the information contained in the specifications for head-stones for soldiers' graves, you are advised that abbreviations may be made in the Christian or first name of the deceased, also in his rank, and in the name of his State, thus:

WM. C. JONES, PVT., MASS.

SAM. H. WALKER, LT. COL., PA.

Where the name of the deceased is long, it must be put on the stone in a curve, with the rank and name of the State below.

By order of the Secretary of War.

M. C. MEIGS,
Quartermaster-General.

Specifications for head-stones for national military cemeteries.

FOR THE KNOWN.

A white marble or gray granite slab, four (4) inches thick, ten (10) inches wide twelve (12) inches high above ground, and, for the latitude of Washington, and south twenty-four (24) inches in the ground; north of that latitude, thirty (30) inches in the ground.

The part above ground to be polished neatly, and to have the top slightly curved.

The number of the grave, the rank and name of the soldier, and the name of the State from which he came, to be cut on one face; the figures and capital letters to be inches long and ½ inch deep; the other letters one inch long and ½ inch deep. The letters may be in relief or incised, at the option of the bidder.

The portion below ground to be rough-dressed, and at least ½ inch wider and thicker than the part above ground. The bottom to be straight and of uniform thickness, and corners square.

FOR THE UNKNOWN.

A granite or marble block six inches square and two and one-half feet long, (6″ × 6″ × 2′ 6″.)

The top and four inches of the sides of the upper end to be neatly dressed, and the number of the grave cut on the top in figures 2½ inches long and ½ inch deep, or relieved. When the figures are more than three, they will be arranged in a curve around the margin.

The top to be flat or slightly convex; the bottom to be flat and full six inches square; the rest of the block to be rough-dressed or split, but to be of full size throughout.

The block to be firmly set in the ground so that the top shall be just even with top of the grave.

Digitized by Google

The marble for the *slabs* to be white, of fine grain, good texture, and hard; for the *blocks*, to be nearly white, of pretty fine grain, and good texture—to be a good durable marble.

The granite for the *slabs* to be of uniform gray, of a fine grain, uniform mixture of the ingredients, and free from all oxides; for the *blocks*, to be gray, of pretty close grain, and to be a good granite for building purposes.

Specimen head-stones, giving the form, the style of finish, and the quality of the stone required, will be exhibited in the Quartermaster-General's Office in a few days.

NOTES.

1. These slabs may be of uniform width and thickness throughout, (viz: 10 inches wide and 4 inches thick,) at the option of the bidder.
2. The granite slabs may be fine-pin hammered on the back, and the face rubbed or sanded smooth.
3. The term *polished* is used to signify the usual manner of finishing marble head-stones.

REPORT

OF THE

COMMISSARY-GENERAL OF SUBSISTENCE.

OFFICE COMMISSARY-GENERAL OF SUBSISTENCE,
Washington City, October 10, 1873.

SIR: I have the honor to submit the following report of the operations of the Subsistence Department of the Army for the fiscal year terminating June 30, 1873:

During the year subsistence supplies for the Army have been procured, distributed, stored, and sold or issued to officers, enlisted men, civilian army employés, and others whose connection with the Army entitles them to such supplies, by the methods required by law and Army Regulations, and under appropriate requisitions and orders of a general or special nature, no changes having taken place during the year in the sources of such supplies, except such as necessarily follow their increasing production and decreasing cost at points nearer the troops to be supplied.

Responsible officers of the Subsistence Department stationed at the headquarters of the several geographical divisions and departments as chief commissaries, acting constantly under the knowledge and approval of their respective commanding generals, are charged, under conformity with the laws and regulations and the orders or decisions of the Secretary of War or Commissary-General, with the procurement, distribution, care, and issue of the necessary supplies.

During the fiscal year ending June 30, 1873, there were reported to this Office 205 advertisements inviting proposals for supplies, 305 contracts for fresh meat, 62 contracts for complete rations, 127 contracts for miscellaneous articles, and 298 contracts, consisting of written proposals and acceptances.

The average price of fresh beef per contracts made during the year was as follows, in the several States and Territories:

States or Territories.	Cents per pound.	States or Territories.	Cents per pound.	States or Territories.	Cents per pound.
Maine	13. 62	Alabama	9. 12	Dakota Territory	9. 09
Massachusetts	14. 00	Mississippi	10. 50	Wyoming Territory	8. 88
Rhode Island	11. 75	Louisiana	9. 00	New Mexico Territory	8. 53
Connecticut	10. 00	Texas	5. 04	Colorado Territory	7. 18
New York	11. 69	Tennessee	8. 68	Utah Territory	7. 87
Pennsylvania	10. 54	Kentucky	8. 68	Montana Territory	9. 15
Maryland	10. 81	Illinois	7. 95	California	11. 70
District of Columbia	12. 20	Michigan	10. 85	Oregon	7. 36
Virginia	11. 93	Missouri	5. 50	Arizona Territory	13. 87
North Carolina	11. 16	Minnesota	8. 85	Washington Territory	9. 18
South Carolina	10. 72	Nebraska	7. 35	Idaho Territory	11. 82
Georgia	8. 37	Kansas	8. 68	Nevada	15. 67
Florida	8. 66	Indian Territory	7. 12		

Making the average contract price for the year 9.81 cents per pound net, being 5½ mills less than for the previous year.

June	17.20	19.98	15.46	16.61	16.61	16.06	16.88	13.95	18.58	22.16
Average	16.69	19.67	15.02	16.16	16.40	17.82	17.64	14.96	18.55	21.96

Making the general average for the year seventeen cents and forty-eight hundredths per ration, showing an increase of thirty-four hundredths of a cent over the average of the previous year.

Under the requirements of section 6, act of March 3, 1865, the Subsistence Department has during the year furnished tobacco for sale to the enlisted men of the Army at cost price, to the amount of $152,489.40, the average monthly sale being $12,707.45.

It is respectfully requested that tobacco be furnished to the enlisted men of the Army by issue as a component part of the regular ration, instead of by sale, and that the ration of tobacco be, as near as may be, the same amount as is at present authorized to be sold to them, viz. 16 ounces per month.

Under the provisions of section 16 of the act of June 30, 1834, and paragraph 1202, Revised Regulations for the Army, 1863, subsistence supplies to the value of $19,925.68 have, in the discretion of commanding officers, been issued gratuitously to Indians of the various tribes visiting military posts, or in their respective nations, no part of which amount is returned to the appropriation for the subsistence of the Army.

During the fiscal year there were received from 415 officers of the Army on duty in the Subsistence Department, who were responsible for subsistence funds or supplies,

3,143 returns of provisions.

1,089 returns of commissary property.

3,231 accounts current.

7,463 total accounts and returns; of which all have been examined and forwarded to the Third Auditor of the Treasury for final settlement with the exception of 876, which await examination in this Office.

Under the act of June 23, 1870, as extended by the act of June 1872, authorizing the proper accounting officers of the Treasury, in the settlement of certain accounts of disbursing officers of the Army and Navy, to allow such credits for over-payments and for losses of funds vouchers, or property, as they may deem just and honorable, when recommended, under authority of the Secretaries of War and Navy, by the heads of the military and naval Bureaus to which such accounts

Digitized by Google

spectively pertain, credits have been recommended in the cases of 370 disbursing officers in the sum of $107,236.77, making the total number of officers relieved under the operation of the acts cited 767, in the total amount of $216,557.56.

Up to, and including, the 27th day of September, 1873, 6,096 claims, amounting to $3,312,757.68, had been submitted for examination under the third section of the act of July 4, 1864, for subsistence alleged to have been taken or furnished during the war for Army use in States not in rebellion; 105 of these, accompanied by regular vouchers given by the officers when purchasing the stores, have been recommended for payment, in the aggregate sum of $9,152.75, by the Third Auditor of the Treasury, as purchases under contract, while 1,301 others (aggregating $431,443.31) have been recommended to him for settlement under the act, in the aggregate amount of $308,295.79; and 4,443, amounting to $2,682,644.18, have been examined and disallowed.

Up to the 30th of September, 1873, there have been received and paid 6,525 certificates for commutation of rations to Union soldiers (prisoners of war) and their heirs, as authorized by the joint resolution of July 25, 1866, and section 3 of the act of March 2, 1867, amounting to $287,318.

Under the act of March 3, 1873, to provide for the better care and protection of subsistence supplies, by selecting from the sergeants of the line of the Army, who shall have faithfully served therein five years, as many commissary sergeants as the service requires, not to exceed one for each military post or place of deposit of subsistence supplies, there have been selected and appointed 149 commissary sergeants, who have been assigned to the same number of military posts; a considerable number of whom have been in the performance of their duties a sufficient length of time to show that they have performed them in a highly satisfactory manner, and already to give evidence that the benefit to the service that was anticipated would result from having such a body of experienced and worthy non-commissioned officers will be fully realized. These commissary sergeants have been selected from those sergeants of the line of the Army eligible under the law, who have an honorable record and are recommended by their company and regimental commanders; such recommendations in the majority of cases being accompanied by testimonials of character, capacity, and honorable service in the line as soldiers and non-commissioned officers by officers under whom they have served.

The officers of this department, their rank and assigned stations and duties, are as follows:

Name and rank.	Assigned duties.	Station.
COMMISSARY-GENERAL OF SUBSISTENCE.

HEALTH OF THE ARMY DURING THE FISCAL YEAR ENDING JUNE 30, 1873.

The monthly reports of sick and wounded received during the year represent an annual average mean strength of 24,844 white and 2,520 colored troops.

Among the white troops, the total number of cases of all kinds reported as taken on the sick-list was 48,767, being at the rate of 1,963 per 1,000 of mean strength. (That is very nearly two entries on the sick

Digitized by Google

report during the year for each man.) Of the whole number 41,393, or 1,666 per 1,000 of strength, were taken on sick report for disease, and 7,369, or 297 per 1,000 of strength, for wounds, accidents and injuries.

The average number constantly on sick report during the year was 1,219, or 49 per 1,000 of strength; of these 978, or 39 per 1,000 of strength, were under treatment for disease, and 241, or 10 per 1,000 of strength, for wounds, accidents, and injuries.

The total number of deaths reported was 412, or 17 per 1,000 of mean strength. Of these 246, or 10 per 1,000 of strength, died of disease, and 166, or 7 per 1,000 of strength, of wounds, accidents, and injuries. The proportion of deaths from all causes to cases treated was 1 death to 118 cases.

Eight hundred and ninety-four white soldiers are reported to have been discharged on "surgeon's certificate of disability," being at the rate of 36 per 1,000 of mean strength.

The reports from the colored troops give the following figures, which do not include the white officers.

The total number of cases of all kinds reported was 4,305, or 1,708 per 1,000 of mean strength. Of these 3,625, or 1,438 per 1,000 of strength, were cases of disease, and 680, or 270 per 1,000 of strength, were wounds, accidents, and injuries.

The average number constantly on sick report was 122, or 48 per 1,000; of whom 94, or 37 per 1,000, were under treatment for disease, and 28, or 11 per 1,000, for wounds, accidents, and injuries.

The number of deaths from all causes reported was 53, or 21 per 1,000 of strength. Of these 46, or 18 per 1,000 of strength, died of disease, and 7, or 3 per 1,000, of wounds, accidents, and injuries. The proportion of deaths from all causes to cases treated was 1 death to 81 cases.

The number of discharges on "surgeon's certificate of disability" reported was 60, or 24 per 1,000 of mean strength.

WORK PERFORMED IN THE RECORD AND PENSION DIVISION.

The number of official calls for information from the Record and Pension Division is somewhat less than during the previous years, but still continues to be large. During the fiscal year terminating June 30, 1872, as stated in my last annual report, 19,237 applications were received, of which 4,827 remained unanswered at the close of the year. From that time to June 30, 1873, the total number of new applications for information received was 16,601, of which 11,080 were from the Commissioner of Pensions, 5,125 from the Adjutant-General of the Army, and 396 from miscellaneous sources. These new cases added to the 4,827 cases remaining on hand at the commencement of the year made 21,428 to be disposed of.

Search was made and replies furnished to the proper authorities in 19,875 of these cases, viz: 13,422 to the Commissioner of Pensions, 6,005 to the Adjutant-General of the Army, and 448 to miscellaneous applicants, leaving 1,553 unsearched cases on hand on the 30th of June, 1873.

As during previous years, the applications for information continue to refer chiefly to the cause of death or discharge from service and the hospital history of soldiers dead or disabled during the war of the rebellion. This information is used in the adjustment of pension and other claims, and serves both as a protection to the Government against fraudulent claims, and as an aid in establishing the merits of worthy ones. It is thought that hereafter the amount of such work required of this Office will slowly but steadily diminish.

Digitized by Google

DIVISION OF SURGICAL RECORDS.

At the date of the last annual report there were entered on the registers abstracts of 207,135 surgical cases and of 39,291 surgical operations, or an aggregate of 246,426 surgical histories. During the year 12,738 cases of wounds and injuries, and 743 cases of operations, have been entered, making the aggregate 219,873 cases of wounds and 40,034 cases of operations, or a grand total of 259,907.

Supplementary information was added, results determined, &c., in 15,612 of these cases from the files of the Office, and in 2,683 cases the remote results of injuries were ascertained from the pension records.

Four thousand six hundred and sixteen reports, letters, and indorsements were received, indexed, and filed, and, in addition to routine acknowledgments, 566 letters were written.

MEDICAL AND SURGICAL HISTORY OF THE WAR.

The distribution of the first part of the Medical and Surgical History of the War having been authorized by Congress, about 1870 copies were available for issue from this Office as shown by the following statement:

Sent to congressional committees, as specimens	12
Sent to Senators	1,000
Sent to Representatives	2,000
Sent to Library of Congress	50
Damaged and imperfect copies	70
To be issued by Surgeon General's Office	1,868
Total number of copies printed	5,000

The delivery of copies from the Government Printing Office commenced in February, 1873, and they have been distributed as fast as received.

The demand for the work has been very great, and the number of copies placed at the disposal of this Office proves insufficient to supply those who as ex-medical officers, having rendered satisfactory service through the war, may be considered as properly entitled to it.

The second part of the work is now going through the press as rapidly as possible.

The interest felt by the medical profession of the country in the attempt to establish a national medical library worthy of the name, in connection with the Army Medical Museum, has steadily increased, as shown by letters received and by numerous presentations of books and pamphlets during the year. The library now contains about 25,000 volumes and 15,000 pamphlets, and although still very incomplete when compared with similar national collections in Europe, is at present the largest in this country. A new catalogue is now being printed which will, it is believed, be a valuable contribution to medical bibliography.

I would respectfully renew the recommendation made in my annual reports of 1870 and 1872, "that the necessary legislation be procured to enable me to publish an edition of one thousand of the Catalogue and Tables of the Anatomical Section of the Army Medical Museum, in a style similar to Morton's *Crania Americana*." A bill for this purpose (H. R. 3453) passed the House, and was before the Military Committee of the Senate at the close of the last session of Congress, thus failing to become a law.*

* The following report, No. 56, from the Committee on Military Affairs of the House of Representatives, dated February 4, 1873, sets forth more fully the reasons for the above request:

[Report to accompany bill H. R. 3453.]

The Committee on Military Affairs, to whom was referred H. R. 3453, entitled "A bill to provide for the printing at the Government Printing Office of one thousand copies of the Descriptive Anatomical Catalogue of the Army Medical Museum," have had the same under consideration, and submit as a statement of the facts in the case, and as reasons for the passage of the accompanying bill, the following communications from the Surgeon-General, which are made a part hereof:

WAR DEPARTMENT, SURGEON-GENERAL'S OFFICE,
Washington, January 18, 1873.

SIR: In reply to your letter of the 17th instant, asking for "a statement of the facts going to show the *importance* of printing the Descriptive Anatomical Catalogue of the Army Medical Museum," contemplated in the bill H. R. 3453, I have the honor to represent that it is mainly through the printed catalogues that the collections of the museum are made available to scientific students, the majority of whom cannot personally examine them. Catalogues of the surgical, medical, and microscopical sections have been already printed, and their distribution has resulted, not only in widely diffusing a knowledge of the contents of the museum relative to those subjects, but in

Digitized by Google

I am compelled to again repeat the statement made in previous reports that very serious and increasing injury has resulted to the service from the continued prohibition of appointments and promotions in the medical corps. The inducements of pay and rank, as at present established, are not sufficient to make the service attractive or remunerative to physicians already engaged in practice; and though, through the prerequisite rigid examination of candidates, it has heretofore been found possible to secure a high grade of talent and qualification, it is upon the younger portion of the profession, the recent graduates, that we must depend in filling up existing vacancies. As a large proportion of applicants fail to pass satisfactory examinations (which require in each case from three to six days) it will be the work of several years to restore the corps to the necessary standard of numbers as provided for in the act of Congress approved July 28, 1866. Although ambition to pass the Army medical board brings forward many of the most promising graduates of the medical colleges, additional inducements of rank, pay, and promotion are becoming more and more necessary, not only to make the number of candidates equal to the needs of the service, but to retain the most desirable of them in the service under their frequent inducements to accept advantageous offers in civil life. The action of the American Medical Association, representing the medical profession of this country, regarding the unequal position of medical officers of the

---

large voluntary contributions to the collections. These have now attained such importance, that few recent works on military medicine, surgery, and hygiene have omitted to refer largely to the rich and reliable stores of information gathered within the walls of the museum.

It is now proposed to print an *anatomical* catalogue, in which the most important feature will be the craniological chapter. The measurement and comparison of human skulls is an interesting and difficult branch of the natural history of man, which has of late received much attention in the scientific world. It is a study that can only be pursued by a few anatomists, having access to large collections of crania, and the requisite experience and skill to measure accurately. Craniology, established as a science by Blumenbach and Camper, was prosecuted in this country by Morton with great success. His work was published by subscription. The medical officers of the Army have collected a much larger series of American skulls than have ever before been available for study. The collection embraces many ancient crania from caves and tumuli, from Greenland and Alaska to Florida and Arizona, and specimens from the majority of the existing tribes of Indians, and of the extinct tribes of the historic period. These, as well as a sufficient series of skulls of the white and black races, have been carefully measured and figured by orthographic drawings, so that the dimensions may be verified. Anthropologists in different parts of the world are anxious for the data thus accumulated for comparison with similar data published in Sweden, Russia, Germany, Italy, France, and England. The French government, through its legation here, after making repeated applications for the tables of cranial measurements, employed an artist to make casts and take photographs of a series of typical skulls; and a professor of Bonn made the study of the collection the object of a trip across the Atlantic. I mention these facts as an indication of the importance of the collection in the eyes of foreign savants; but it is especially with a view of enabling scientific students in our own country to utilize the collection that I urge the publication of this catalogue.

In addition to the unique collection of crania, the anatomical cabinet possesses a good series of preparations and drawings of the various organs of the body, properly classified and catalogued. To render these accessible to students, a printed catalogue is simply a necessity.

I take what I trust may be esteemed a pardonable pride in the reflection that this important collection has been accumulated through the almost unaided zeal and industry of the medical officers of the Army, and, I was about to say, entirely without cost to the Government. It is true, however, that a few preparations have been obtained by purchase, but by far the largest proportion have been collected by the medical officers, or procured in exchange for objects of ethnological interest collected by them.

If the members of the committee would contrast the results obtained with the small annual appropriation of $5,000 for the Army Medical Museum with the condit

Digitized by Google

Army—as compared to that of other staff corps—is based upon actual investigation of the subject, and presents to Congress all the facts in the case.

I can only urge most earnestly upon your attention the pressing and absolute necessity for such legislation as will secure to our officers and soldiers the efficient and reliable attendance in wounds and sickness which the Government should provide, and will make a position in the medical corps of the Army, now as formerly, an object of ambition to the best educated and best qualified young men in the profession.

At the date of my last report there existed fifty-nine vacancies in the medical department, viz: two assistant medical purveyors, four surgeons, fifty-two assistant surgeons, and one medical store-keeper. During the past year one surgeon and one assistant surgeon have died, and three assistant surgeons have resigned; leaving at present sixty-four vacancies in the corps, viz: two assistant medical purveyors, five surgeons, fifty-six assistant surgeons, and one medical store-keeper.

J. K. BARNES,
Surgeon-General, U. S. A.

To the Hon. the SECRETARY OF WAR.

---

of foreign national museums, and the large sums annually voted them, the progress here accomplished would be appreciated, the results being possible only because the labor has been performed, as incidental to their legitimate duties, by those already in the Government service.

I have restricted myself to a concise statement of the importance of the proposed catalogue. Should the members of the committee desire more details, I would respectfully suggest that Assistant Surgeon Otis, who is familiar with them, should be granted a hearing before the committee.

I am, sir, very respectfully, your obedient servant,

J. K. BARNES,
Surgeon-General United States Army.

Hon. JOHN COBURN,
Chairman Committee on Military Affairs.

WAR DEPARTMENT, SURGEON-GENERAL'S OFFICE,
Washington, D. C., January 24, 1873.

SIR: I have the honor to forward the following estimate of cost of printing and binding Catalogue of the Anatomical Section of the Army Medical Museum, viz:

For 1,000 copies:

Plates and wood-cuts	$20,000
Paper, composition, and printing	2,700
Binding, in cloth	1,000
Binding, in leather	2,500

For 5,000 copies the cost will be:

For plates	$38,000
Paper, composition, and printing	7,500
Binding, in cloth	5,000
Binding, in leather	12,500
Total cost, 1,000 copies, in cloth	23,700
Total cost, 5,000 copies, in cloth	50,500

Very respectfully, your obedient servant,

J. K. BARNES.
Surgeon-General United States Army.

Hon. JOHN COBURN,
Chairman Military Committee House of Representatives.

The committee recommend the passage of the accompanying bill. .

REPORT

OF

THE PAYMASTER GENERAL.

PAYMASTER-GENERAL'S OFFICE,
Washington, October 10, 1873.

SIR: I have the honor to submit my annual report of the transactions of the pay department of the Army for the last fiscal year ending 30th June, 1873.

Tabular statements herewith inclosed show in detail the fiscal operations of the department for that year, summarily stated as follows:

RECEIPTS AND DISBURSEMENTS.

Balance on hand at beginning of fiscal year, (July 1, 1872)		$2,289,221 94
Received during fiscal year from Treasury		14,008,477 95
Received from soldiers' deposits		209,850 38
Miscellaneous receipts		221,079 32
Total		16,728,629 59
Disbursed to the Army	$11,056,522 35	
Disbursed to the Military Academy	176,010 97	
Disbursed on Treasury certificates	1,936,230 16	
Total disbursements	13,168,763 48	
Surplus funds deposited in Treasury	1,188,467 30	
Miscellaneous receipts deposited	218,407 00	
Balance in hands of paymasters June 30, 1873, to be accounted for in next report	2,152,991 81	
Total		16,728,629 59

The most important matter which it is my duty to bring before you is the imperative necessity of more paymasters. The sixth section of the act of 3d March, 1869, forbids any appointments and promotions in the staff of the Army until further legislation. The thirty-first section of the act of 7th July, 1838, forbids the detail of officers of the Army as acting paymasters. Thus the Pay Department has not the resources of the Quartermaster's or Subsistence Departments; for details for temporary duty in those departments have always been made, as also for any of the other departments of the staff.

There are now sixteen vacancies in the Pay Department under the organization provided by the act of 28th July, 1866, two in the rank of lieutenant-colonel and fourteen in the rank of major, five of these vacancies occurring since my last annual report. The duties of paying

Digitized by Google

the troops during the last year have been performed in as satisfactory a manner as could be expected, considering the reduced number of paymasters. I shall do but simple justice to them when I say that they have faithfully and efficiently discharged their duties, oftentimes in very remote and exposed regions on the frontier. One excellent officer has been lost at sea and two attacked by robbers (fortunately foiled in their audacious attempts) during the last year, which facts exhibit the dangers incident to their tours of duty. The War Department should have it in its power to give respite and relief to many on remote stations, which can only be accomplished by an increase of the number of paymasters. But without reference to those considerations, an increase is needed for the absolute wants of the service.

I recommend that the number of paymasters be now established at fifty-two instead of sixty as provided by law in the eighteenth section of the act of 28th July, 1866, and a repeal of the interdict upon future appointments and promotions. It is but just that the power of promotion should be restored to the Executive; for what is an army or a staff corps good for, in which the principle of promotion is not recognized?

I recommend that a greater period than thirty days be allowed to an officer on leave of absence without reduction or pay. Thirty days barely suffices to enable an officer to travel from remote departments to the East and return. By the eleventh section of the act of 20th June, 1864, it was enacted that "leave of absence for other cause than sickness or wounds may be allowed an officer by order of his proper commander, without deduction from his pay and allowances: *Provided*, That the aggregate of such absence shall not exceed thirty days in any one year." A previous act (of 3d March, 1863) provided that the reduction should be one-half the pay and allowances of the officer.

The only other legislation concerning the Pay Department which I recommend is, that the pay of paymasters' clerks should be increased. It is now $100 per month. A large share of their duties is discharged in regions where the journeys are arduous and very dangerous—regions, too, having many attractions to draw them from our employment. The superior pay enjoyed by clerks of the Quartermaster's and Subsistence Departments has often worked to the injury of the Pay Department. Expert clerks of this Department have resigned and gone into those Departments. This is but the natural effect of inadequate compensation and of the existing inequalities.

The acts of 15th May, 1872, concerning the pay of the enlisted men, and establishing a system of deposits, have signally ameliorated their condition. But they have not yet reduced the number of desertions as much as we had hoped. Still the number of desertions in the Army, in the fiscal year ending 30th June, 1873, was five hundred less than in the previous year, and one thousand less than in the year ending 30th June, 1871. It would be difficult to devise legislation better calculated than those acts to encourage re-enlistments, reward faithful service, and diminish desertions. It may require the experience of several years to develop their full effect upon the rank and file of the Army. Some of the company commanders represent that the interest given for deposits should have been established at 6 per cent., instead of 4 per cent., per annum.

I append to this report a table exhibiting the average amount of deposits per company during the fiscal year ending June 30, 1873, in the various military departments. From this it appears that the largest amount of deposits per company was in the Department of Arizona,

Digitized by Google

viz, $1,583; next, in the Department of the Columbia, $717 per company. In these departments there was the greatest amount of field operations, the troops being in campaign against the Apaches and Modocs.

This shows, as I expected, that in time of war the most deposits will be made by the enlisted men. During the civil war such a system would have given the Government the handling of many millions for years. During the last years of the war there were at least about 14,000 companies of troops employed. This, at the rate of $1,500 deposited by each company, would have made $21,000,000 per annum.

During the year ending 31st August, 1873, $246,643 (or an average exceeding $20,000 per month) have been deposited, the use of which the Government will have for an average period of about two and one-half years.

Respectfully submitted.

BENJ. ALVORD,
Paymaster-General United States Army.

The Hon. the SECRETARY OF WAR.

C.—*Soldiers' deposits in the fiscal year ending June* 30, 1873.

Department.	Number of troops.	Amount.	Average deposit per company.

REPORT

OF

THE CHIEF SIGNAL-OFFICER.

WAR DEPARTMENT,
OFFICE OF THE CHIEF SIGNAL-OFFICER,
Washington, D. C., November 1, 1873.

SIR: Instruction in military signaling and telegraphy has continued during the past year at the Signal-School of Instruction and Practice at Fort Whipple, Va.

One of the officers at the Military Academy at West Point is designated as instructor of military signals and telegraphing, but no report has been received from him, and it is not known what proportion of study and practice is allotted the several branches under his charge. Experience leads to the belief that the whole time of a skilled and industrious officer would be occupied by a course of instruction of the cadets at West Point, which should insure to them that proficiency in military signaling and telegraphy requisite to maintain equality in these branches with the officers of European services, or to be of any practical value to the Army of the United States. The recommendation made in previous reports that more special instruction at the Military Academy should be provided for, with a merit value affecting the standing of the cadets, is renewed, and it is also suggested that, to secure accuracy and uniformity, the officer to be in future charged with that instruction should have passed the course at Fort Whipple. There has been a partial instruction in the Department of the Missouri, under the charge of Second Lieut. Philip Reade, Third United States Infantry, and acting signal-officer of that Department. Although this officer has not had the advantage of the course provided at Fort Whipple, his industry and zeal have been attended with good results. His reports show fifty five officers to have been fully, and ninety-seven partially, instructed, and one hundred and two enlisted men fully, and three hundred and ten partially, instructed during the year.

The only full and regular course of instruction, that at Fort Whipple, has continued to be under the immediate direction of First Lieut. C. E. Kilbourne, Second United States Artillery, acting signal-officer, who has proved faithful and efficient. The report of commissioned officers instructed, (six in number,) with their respective amounts of field-practice, is given in Papers 1 and 2, hereto attached. The number of private soldiers instructed, as candidates for promotion to the grade of observer-sergeant, has been sixty-seven, and of those instructed as assistants to observer-sergeants, one hundred and twenty-seven. The details of their instruction, examination, promotion, and duty are presented in Papers 3 and 4.

The Signal-School of Instruction and Post of Fort Whipple, Va., has, during the year, assumed a character of permanence which has been much desired. New barracks, a mess-hall, a guard-house, and stables

Digitized by Google

have been erected; and two buildings for officers' quarters, a building for the purposes of instruction, and a wagon-shed for the field-telegraph train, are in progress of construction. The hospital has proved ample for the requirements of the command, and has been well managed under the charge of Acting Assist. Surg. L. W. Ritchie. A large amount of work has been performed in the leveling and preparation of the ground occupied by the old fortifications. To complete the equipment of the post, in addition to the need for a commissary and quartermaster store-house, a wagon-shed for quartermaster wagons, and stabling for necessary public animals, a pressing want is felt for officers' quarters, those now provided not being sufficient for the number of officers regularly on duty and under instruction. The Fort has become of interest to, and is frequently visited by, distinguished American citizens and officers of foreign governments. It is desirable that the War Department, always considered responsible for its existence, should provide for it as a creditable and representative post. The care of the Secretary of War has been already directed to the comfort of the enlisted men. His favorable consideration is now asked to secure the requisite accommodation for the officers and the protection of the public property.

The field-telegraph train has been greatly improved, and drills with it are regular and satisfactory, having been under the special direction of First Lieut. R. P. Strong, Fourth United States Artillery, acting signal-officer, who has, during the year, been in immediate charge of the post, and has shown much energy in the performance of the duties confided to him. The other drills of the signal-service detachment, with signal equipments, and with, as well as without, arms, have been thorough, and through increased facilities as well as numbers discipline has been advanced. The system of duty and practice at Fort Whipple gives the military training necessary for the duties of the signal-service, and it imparts the accurate understanding of the special branches for which it has been established. It is the sole place in the United States where either commissioned officers or enlisted men can be completely instructed and tested in a branch of the military profession now recognized to be of prominent importance in time of war, and of no less utility in time of peace.

The study of military signaling and telegraphy requires that the student shall have the example and illustration of a skilled master. It would be unwise, in providing for the instruction of the Army, to ignore the thorough and well-appointed school already established, and to expect much benefit from the mere issue of text-books and equipments, where teacher and taught are alike ignorant. The plan, at one time suggested, that post-adjutants should become instructors, has proved a failure.

During the past year a number of officers have applied to be instructed at Fort Whipple; but the absence of any arrangement for details has prevented, for the time, a favorable consideration of their requests. It is desirable that a system of details should be established. The proper discharge of the duties of the field signal-service simply, *i. e.*, those embracing only such knowledge of military signaling and telegraphy as is constantly requisite at our frontier posts and for Indian wars, in time of general peace, or in the field during war, requires a special tuition of at least sixth months' duration, and officers of every regiment and company ought to pass through the course as a part of their requisite military study. The signal-service is an armed organization, and often needs the disciplined use of arms. Drills with arms, the movement of armed bodies, and the care of troops are as constitu-

Digitized by Google

ent a portion of the duties at Fort Whipple as at any post of the Army, and the officers ordered there need lose nothing of their military practice. It is recommended that six officers, to be selected by the Secretary of War, upon the recommendation of their regimental and departmental commanders, be detailed for instruction in the duties of the "field" signal-service alone, as distinguished from the full duties of that service. These officers to rejoin their commands upon the completion of the course, their places to be supplied through other details, published in advance, in the manner customary in details for artillery instruction. The time of instruction would average about six months.

The officers so to be detailed should, however, be held to be of a class distinct from those charged with the full duties of the signal-service. The full duties of the signal-service include those applicable to peace as well as to war, and to attain proficiency in them the whole time of an officer, during years of study and application, is requisite. They comprise the duties of the field signal-service above described, and also all the duties of the service in relation to the display of warning signals, giving notice in advance of storms and floods. The latter involve the study of meteoric indications, and the practice and habit of controlling the organization spread over the United States; of managing the taking, telegraphing, receipt, collocation, and publication of reports from the different stations; of deducing correct results from them, and of giving necessary warnings, by signals or otherwise, when danger threatens. The value of the officer constantly increases with the experience had in the observation of storms, the study of meteoric indications, and the correct ordering of signals. To fulfill it reliably, the employment of a selected officer, once placed upon this duty, must be permanent. Provision should be made for such permanent employment for the same reason as it is made for the permanent employment of officers of the engineers and of ordnance. It will be fatal to the service if it is attempted to perform its duty by temporary details. The detail of officers for the duties of the full signal-service, as distinguished from the field signal-service, should, therefore, be regarded as almost necessarily permanent, and it should be made with the expectation of being permanent, until such time as Congress shall provide an established organization, to prevent the accidents and imperfect working to which a temporary service is always liable. The urgent need of such legislation is again presented for the consideration of the Secretary of War.

In the last annual report mention was made of the hardship involved in the fact that the officers detailed for the duties of this service were subjected to the misconstruction, and sometimes to the injustice, of those from whose commands they are involuntarily separated. Applications are frequently pressed to bring about the relief of officers, by persons wholly ignorant of their duties, which, if successful, would seriously embarrass the execution of the work required by law. It ought not to remain possible, through neglect of legislation, that the whole machinery of the signal-service should stop in an hour, as might already have happened had not the wise discretion of the Secretary of War been exercised to prevent so great a misfortune. Justice would seem to require that a service which has existed, and with admitted good result to the United States, for now thirteen years as a temporary service, and on which officers have served continuously through details of ten years' duration, in peace and in war, living and dying in this service alone, should be held to have established a claim to permanency. With interests now depending upon its daily work as great as can by

Digitized by Google

any possibility rest upon any other branch of the service, there is no day but upon which it may be embarrassed, or even fatally crippled, by the removal of its skillful men at the junctures at which their services are most needed. The War Department, while held rigidly responsible for the failures of the service, has not yet been granted the legislation to provide for its proper discharge.

Recruiting for assignment to the signal-service has been conducted under the direction of the War Department, that the recruiting officers of the general recruiting service at designated stations should enlist and order to this office such men, they passing the required physical examination, as may be presented to them by the recruiting observer-sergeants of the signal-service. While the popularity of the service has been remarkable, its requirements are not always understood by those who apply to be enlisted. So much trouble has been occasioned to the Secretary of War by recruits complaining of the military duties considered by this office essential, that a series of circulars and instructions, shown in Papers 5 and 6, and paragraph 144 of Paper 7, hereto annexed, have been prepared and so brought to the notice of every applicant for enlistment, the recruiting sergeant, and the recruiting officer, that misapprehension seems to be impossible. The recruits are divided into classes, those for the "full" and those for the "field signal-service." The first mentioned are such as, in the judgment of the observer-sergeant, after examination by him, are fitted by education and intelligence for the full duties of the signal-service, including not only the duties connected with field-signals and telegraphy, but the duties of observers at stations of observation. These men are placed on duty at Fort Whipple, Va., as private soldiers of the signal-service detachment there stationed, for at least two months, after which they have the privilege on their own application, their conduct being good, of appearing before a board of officers as candidates to be placed under the tuition necessary to be assistants to observers on stations. Passing this examination the soldier continues the course, still performing his military duties until such time as he is reported by the instructor competent to be an assistant. He may then be detailed on duty as an assistant to an observer on station. After six months' service satisfactorily rendered as such assistant, during which time he recites regularly to the observer in charge, and upon a favorable report, he may be ordered to Fort Whipple to be placed under the additional special instruction given to candidates for the grade of observer-sergeant. This additional instruction lasts about two months, during which the candidate must serve on four tours of guard duty. Upon its completion he is ordered before a board of officers convened at this office for final examination on the special subjects of the instruction, and also before another board convened at Fort Whipple for report on his proficiency in the drill (with and without arms) and duties of the signal service detachment, and his understanding of the military duties and responsibilities of sergeants in the signal-service, this examination embracing the more essential of the Articles of War, Army Regulations, and customs of the service applicable to the duties of the grade above mentioned. On passing both of these boards, the candidate, as vacancies occur, is promoted to be sergeant in the signal-service, but, as a rule, is obliged to serve one month at Fort Whipple before being ordered on station, during which period, in addition to his other duties, he takes, under the direction of the instructor, such observations and makes such records and reports as may keep him familiar with the duties of an observer.

Applicants who, in the judgment of the recruiting observer-sergeant,

Digitized by Google

are not fitted by education and intelligence for the full duties of the signal-service, but who are of such ability and character as to render them qualified for its field duties, *i. e.*, those of field-signals and telegraphy, as distinguished from those including the duties of observer-sergeant, are presented to the recruiting officer for enlistment to and assignment to the "field signal-service." The recruits so enlisted are not precluded from eventual advancement to the full duties of the signal-service and promotion, in case they prove fit and worthy.

A division is also made, after enlistment, among the private soldiers, by which those of good conduct, who pass specified examinations in elementary education, military signaling and telegraphy, and the duties and drill (with and without arms) of soldiers of the signal-service detachment, are announced as privates of the first class, and wear the special designation in uniform provided for them in General Orders 92, War Department, Adjutant-General's Office, dated October 26, 1872.

The propriety of legislation which will establish, as a special grade, that of the observer-sergeants of the signal-service, is urged upon the consideration of the Secretary of War. Very many of these men have enlisted with the hope that Congress will, in an organization of the signal-service, improve their position. This hope ought to become a realization. The great majority of the men of this service have enlisted for it directly under the promise, authorized by the Secretary of War, that they shall not be transferred to any other branch of the Army. They neither have nor would have enlisted under the general recruiting regulations, and without the promise above referred to the work intrusted to this office could not have been done.

In this connection it is proper to add that the action of the President in the promotion of observer-sergeant Theodore Smith to a lieutenancy in the Army, for good conduct, has been highly beneficial to the service.

The systematic course by which the enlisted men are selected, drilled, examined, instructed, tested by practice, instructed in higher branches, again examined and again tested before being intrusted with the management of stations, has thrown much labor upon the several boards of examination. The preliminary board, convened at this office for the examination of applicants to be placed under the first course of instruction, is composed of Bvt. Lieut. Col. Garrick Mallery, acting signal-officer and assistant, Bvt. Capt. H. W. Howgate, acting signal-officer and assistant, and Second Lieut. David J. Gibbon, acting signal-officer. This board has held a session on every Thursday during the year, and has examined (including re-examinations) three hundred and one applicants.

Of the civilians, whose enlistment depended upon the result of their examinations, eighteen were accepted, a much larger number being rejected. The proportion of those already enlisted, whose examinations were satisfactory, has exhibited the good judgment of the observer-sergeants who selected them, one hundred and twenty-one having passed the board, while but fourteen are in the list of failures, some of whom may yet pass on another examination.

The board convened at this office for the examination of candidates for promotion to the grade of observer-sergeant is composed of Bvt. Lieut. Col. Garrick Mallery, acting signal-officer and assistant; First Lieut. C. E. Kilbourne, acting signal-officer and instructor at Fort Whipple; and Bvt. Capt. H. W. Howgate, acting signal-officer and assistant. This board meets from time to time, as the instructor at Fort Whipple reports candidates ready for examination, and has examined

Digitized by Google

during the year fifty-two candidates, of whom all but two have passed and been promoted.

The board convened at Fort Whipple for examination in the general duties of soldiers and non-commissioned officers, and the special drill of the signal-service is composed of First Lieut. George S. Grimes, Second United States Artillery; First Lieut. C. E. Kilbourne, Second United States Artillery; and First Lieut. C. C. Wolcott, Third United States Artillery, all acting signal-officers.

The morning report of Fort Whipple for September 30 includes sixteen non-commissioned officers and one hundred and thirty-one privates as present. Of these, seven non-commissioned officers and thirty-seven privates are under special instruction.

The work done at this office has become of large amount, comprehending many details. Never ceasing for a moment, it is necessary that reliefs of officers and enlisted men shall be so arranged that each shall take up his duty at a particular point and perform it in the manner prescribed. At once the greatest expedition and minuteness are required, both of which can only be obtained by a number of persons working at the same time on different parts of the same general duty, with a system of checks and counter-checks to prevent error, or at once to detect its cause and the responsibility for it. The experience thus far obtained has resulted in the issue of regulations and rules for the government of the office, (Paper 8,) to which attention is invited.

Bvt. Lieut. Col. Garrick Mallery, acting signal-officer and assistant, has continued during the year to have charge of records, general correspondence and orders, with the superintendence of enlistments and other details specially assigned to him. The various duties in his care have been faithfully discharged.

The correspondence of the office in its several divisions is extensive, forty-six thousand four hundred and thirty-two letters having been sent, and two hundred and seventeen thousand five hundred and seventy-five received during the year, the record of which is classified in Paper 9. The aggregate of the correspondence is two hundred and sixty-four thousand and seven letters and documents sent and received, exclusive of publications and telegrams. The numerous requests for information on subjects, some only indirectly connected with the duties of this office, require of themselves much attention.

The office is in communication with many foreign correspondents. The following-named below in order of time are some of those who have, at their request, been regularly furnished with copies of the weather maps and bulletins, viz, Robert Scott, esq., director Meteorological Office, London, England; Professor Buys Ballot, director Meteorological Institute of the Netherlands, Utrecht, Holland; Professor H. Mohn, director Royal Meteorological Institute of Norway, Christiania, Norway; Capt. N. Hoffmeyer, director Royal Meteorological Institute of Denmark, Copenhagen, Denmark; Professor Dr. Prestel, Emden, Germany; Monsieur Marie Davy, chef de la division météorologie de l'Observatorie physique central de Montsouris, Paris, France; Monsieur Harold Tarry, vice-president Meteorological Society of France, Paris, France; Imperial German Naval School at Kiel, Germany; His Majesty the King of Würtemburg, Stuttgart, Germany.

First Lieut. Henry Jackson, acting signal-officer and assistant, has continued to discharge the duties of property and disbursing officer with skill and industry. Seven thousand nine hundred and eighty-nine accounts have been examined and settled in the property division, excluding those of officers of the Army responsible for signal property,

Digitized by Google

which number four hundred and seven. Six hundred and six instruments have been purchased, and six hundred and twelve issued. (Paper 10.) Lieutenant Jackson has also continued the collection of statistics to complete the lists of elevations above sea-level, requisite for the accurate reduction of meteorological observations. There have been added this year sixty-three levels of lines of railroads received from railroad engineers, seven lines of levels received from civil engineers, fourteen levels collected from other sources.

The library of the office has been increased to two thousand four hundred and seventy bound volumes, exclusive of two hundred and thirty pamphlets, and one hundred and two maps and charts. The works are selected wholly for their value to the scientific branches connected with the duties imposed upon it, and many of them have been obtained without expense to the United States through the system of exchanges established. Paper 11 is a list of the foreign contributions to the library.

The act of Congress approved March 3, 1873, entitled "An act making appropriations for sundry civil expenses of the Government for the fiscal year ending June thirtieth, eighteen hundred and seventy-four, and for other purposes," contained the following proviso: "Provided that the chief signal-officer may cause to be sold any surplus maps or publications of the signal-office, the money received therefor to be applied toward defraying the expenses of the signal-service, an account of the same to be rendered in each annual report of the chief of the signal-service." This account is presented in Paper 12, being exclusively for the amounts received for the sale of maps.

Until recently, the office has not been able so far to increase the issue of its publications as to allow of any considerable surplus, nor have persons interested yet become generally aware of their privilege to obtain, at a trifling expense, the publications which before had been applied for and necessarily refused. It is believed that the above provision will lead in future to a wide distribution of meterological knowledge without expense to the United States.

Brt. Capt. H. W. Howgate, acting signal-officer and assistant, has continued to have general charge of instruction and general supervision of the observer-sergeants and assistants to observers at stations, and of the receipt, record, and publication of the weather reports, which duties, together with others specially assigned to him, have been performed with marked devotion and ability.

The following record of stations is reported by this officer:

ALPENA, MICHIGAN.

[*Official Number*, 85.]

Latitude	45° 05′
Longitude	83° 30′
Elevation of barometer above sea-level	608 feet.

The location of the office has not been changed since the date of the last report, and Sergt. F. P. Bayes still remains in charge, having given general satisfaction by the manner in which his reports have been rendered.

The station was inspected in March, and such trifling irregularities as were discovered by the inspector promptly corrected.

Cautionary signals are not displayed here on account of the uncertainty of telegraphic communication, although a favorable point for them; but warnings are sent to the observer to notify the shipping

Digitized by Google

whenever danger is anticipated, and these warnings have been attended with beneficial results.

The several instruments are well located. The instrument shelter has been moved from the window to the roof of the building, and thoroughly painted.

Bulletins are not issued, as no reports from other stations are received; but the regular reports are published in the weekly papers in a condensed form.

AUGUSTA, GEORGIA.

[*Official Number*, 23.]

Latitude	33° 2[illegible]′
Longitude	81° 54
Elevation of barometer above sea-level	172 feet.

No change has been made in the location of the office since the last report, nor is any considered necessary at present. Sergeant N. D. Lane and Private Frank Mangels, both of whom were on duty at last report, still remain, and have given satisfaction.

The station was inspected in February, and found in good condition, with the exception of some slight irregularities, which were corrected immediately, when pointed out.

The instruments are well exposed and in good condition.

The only reports received are those from the Western Gulf stations, which are here transferred to Washington.

During the year four hundred and eighteen bulletins of local observations have been furnished the press, and published, in addition to the regular monthly means of barometer and thermometer, amount of rain, &c.

The afternoon Probabilities are received regularly, and printed in the newspapers on the morning of the day succeeding their issue from the central office.

BALTIMORE, MARYLAND.

[*Official Number*, 18.]

Latitude	39° 18′
Longitude	76° 38
Elevation of barometer above sea-level	45.19 feet.

No change has been made during the year in the location of the office, but an additional room was furnished the observer in February free of cost, through the courtesy of the Baltimore Fire Insurance Company. This room is immediately adjoining the office, and adds materially to the comfort of the observer and to the facilities for the proper discharge of his duty.

The station was inspected in February last and found in excellent condition. As the inspector reported the men overworked, another assistant was ordered to the station March 1, and since that date two assistants have been on duty. Sergt. H. J. Penrod still remains in charge, and has perfor med his duties conscientiously and satisfactorily. Private Otto Schutze, the assistant at the date of the last report, and his successor, Private J. W. Craig, were both called in for promotion during the year, and passed a successful examination. Private Mark Downing was relieved for misconduct September 8, and is now at

Digitized by Google

Fort Whipple on signal duty. Privates F. Anderson and Charles Freyer are the present assistants.

Full reports have been received during the year from all stations, and furnished to the press, in addition to the usual publications in the form of bulletins and maps. Until November 22, 1872, manifold maps were issued; but since that date printed maps have been sent from the central office, and are received for distribution by 2 p. m., daily. This change has given general satisfaction, as the morning Probabilities, printed in these maps, are received in advance of the issue of the afternoon papers containing them.

During the year twelve thousand eight hundred and eighty-seven maps and four thousand seven hundred bulletins have been issued, and six hundred and forty-five reports furnished to the press. All the daily papers publish the Synopsis and Probabilities with regularity, and have manifested a gratifying interest in the service at all times.

The observer states that inquiries concerning the weather are made daily at the office, and that mechanics, artists, merchants, sailors, invalids, physicians and surgeons are to a greater or less extent governed by the Probabilities received from the central office in pursuing their daily avocations.

Twenty-one cautionary signals were displayed during the year, of which nine are reported by the observers as justified in the immediate vicinity of the station.

As to known benefits to commerce or other interests the observer remarks as follows:

October 24-26, 1872.—Sailing-vessels took the warning and remained in port.

March 9-10.—Some damage was done in the more exposed portions of the city to unfinished buildings.

March 15-17, 1873.—Considerable damage was done by the storm to some unfinished buildings in the more elevated portion of the city. Vessels generally remained in port during the display of the signal.

March 19-22, 1873.—Though there was no gale in Baltimore, a fierce tornado is reported from off "York Spit" at midnight of March 20, which lasted fifteen minutes.

March 24-27, 1873.—Steamers due from Norfolk were delayed by the wind three hours.

March 29-30, 1873.—Considerable damage done by the storm. No lives lost or vessels wrecked.

BOSTON, MASSACHUSETTS.

[*Official Number*, 13.]

Latitude	42° 21′
Longitude	71° 04′
Elevation of barometer above sea-level	77.4 feet

No change has been made in the location of the office since the last annual report. It is in the heart of the city, and convenient to the different newspaper and telegraph offices, while the roof from which the cautionary signals are displayed affords a good view of the greater part of the harbor.

Reports from twenty-four other stations are received here, of which number four are received from the north and transferred to New York. These reports are bulletined regularly, and furnished to the press, and manifold maps of the morning reports are also printed.

During the year three thousand four hundred and forty-two maps and four thousand one hundred and ninety-three bulletins have been issued, and two thousand and fifteen reports furnished to the press. The Synopsis and Probabilities received through the agency of the Associated

Digitized by Google

Press are regularly published by the daily papers, which also print the monthly abstracts and other data furnished by the observer. The issue of post-office bulletins to four hundred and three offices was commenced July 15, 1873, and been continued daily, with the exception of Sundays since that date. These bulletins contain the midnight Synopsis and Probabilities issued from the central office, and two copies are mailed to each post-office. The total number of copies issued to date amounts to sixty-two thousand and sixty-two.

Previous to this issue, the observer wrote manifold copies of the Probabilities for display in connection with the regular bulletin. Of these, one thousand one hundred and eighty-eight copies were made and posted.

Sergt. H. E. Cole, who was in charge of station at the date of the last report, was relieved April 12, 1873, on account of ill-health, and succeeded by Sergt. E. A. Lewis, who was succeeded September 24 by Sergt. P. G. Dietz, who is now in charge. Private Dunne was ordered in for promotion July 1, and succeeded by Private E. D. Holbrook, the present assistant. When the issue of post-office bulletins was commenced, two additional assistants were sent there to aid in getting them out promptly. One of these men was relieved for misconduct September 23, and his place filled by a better man. Upon the recommendation of the inspecting officer, a fourth assistant was sent to the station September 29, making four now on duty.

The station was inspected in January, and again in September of this year. At the first inspection, the instruments and records were found in excellent condition, and the observer, Sergeant Cole, highly commended for his zeal, intelligence, and excellent habits. His relief was a source of regret to the business men with whom he held official relations.

The full report of the September inspection has not yet been received, but the inspector reported by telegraph the unfitness of Sergeant Lewis, and recommended his immediate relief.

The meteorological committee at the station, of which Mr. Thomas Gaffield is chairman, has been active in rendering such assistance as was called for from time to time by this office, and also in extending courtesies to the observer on duty.

During the year thirty-four cautionary signals have been displayed, of which number twenty are reported by the observer as justified at the station.

The observer remarks in reference to these signals, as follows:

November 29–*December* 1, 1872.—Severe storm reported along the coast.

December 26–27, 1872.—Heavy storm along the coast, and shipping all remained in port

January 5–6, 1873.—Severe storm on the coast; all shipping remained in port.

January 23–25, 1873.—Shipping remained in port. The display of this signal commended by the press.

January 27–28, 1873.—Shipping remained in harbor. Storm severe on the coast south of this station.

February 7–8, 1873.—Storm along the coast reported severe. Vessels going to sea took warning and remained in port.

February 16–17, 1873.—Shipping remained in port. Severe storm along the coast.

February 21–22, 1873.—Very severe storm; shipping remained in port. The press commended the display of the signal.

March 10, 1873.—Short, but severe storm.

March 11–12, 1873.—Shipping remained in port. Storm severe on the coast.

March 15–17, 1873.—Southeast snow-storm, followed by very high westerly wind. The shipping remained in port, with the exception of the steam-yacht Grace Irvin which put to sea, after being specially warned that a danger-signal was flying, and was lost, with all on board, four or five persons.

March 29–*April* 1, 1873.—The shipping would not sail at night, but waited for daylight, while the signal was displayed.

Digitized by Google

April 12–15, 1873.—Shipping remained in port during display of signal; storm long and severe.

May 2–4, 1873.—Vessels remained in port; blowing hard outside.

August 13–15, 1873.—Storm very severe outside. Many vessels staid in port, and a few small boats were washed from their moorings.

The following extract from a special report, made by Sergeant Cole, upon the meteorological conditions attending the great fire of November 9 and 10, 1872, is believed to possess sufficient general interest to justify its insertion here:

During the progress of the fire, the wind varied from N. N. W. to N., with a velocity from five to nine miles per hour, weather being clear and pleasant and the air dry, the fire breaking out shortly after 7 p. m., November 9, 1872. Between 2 and 3 a. m., November 10, standing at the intersection of School and Devonshire streets, on the north or windward side of the fire, looking south toward and at a distance of about 500 feet from it, the indraught of air along the ground through Devonshire street toward the burning buildings assumed the character of a brisk wind, probably sixteen or eighteen miles an hour, while little or no wind could be felt on School street. At this time the heat over the fire, which covered an area of probably 800 or 900 feet square, was so great as to cause fire, smoke, &c., to be carried in spirals to a very great height.

At a point on South street, which is on the south or lee side of the fire, and about 200 feet from it, the induced currents, at about 3.15 a. m., were very strong, rushing through the street toward the fire, which then probably covered over 1,000 feet square, with a velocity of probably thirty or thirty-five miles an hour, carrying the fire bodily to windward.

This state of affairs appears to be the reverse of the Chicago fire, where the force of the wind prevailing at the time was sufficient to overcome the induced currents, and the fire burned to leeward. In the present case, it appeared as if the light wind permitted the indraughts to rise at a considerable angle after reaching the fire, leaving a large space of highly rarified air in their front, inducing stronger currents to rush in, which, meeting the indraught, gave the spiral or whirlwind form to the ascending currents; and this idea is strengthened by the fact that on the outskirts of the fire the flames, when breaking through the windows of the buildings, always tended upward, joining with the whirling mass of flames and smoke which covered that portion of the city with a fiery dome, while the flames from those buildings more in the center or vortex of the fire formed downward a perfect cataract of flame, destroying even the granite blocks with which the streets were paved. The surface-wind generally was accelerated on all streets leading to the fire, but more especially so on the south side of it.

During the night a flock of ducks passed at a great height over the fire, and the light reflected from their plumage made them appear as fire-balls passing rapidly through the air. Many who marked their flight called them meteors, and likened them to the fire-balls said to have been seen in the Northwest during the great fires in that region.

As an example of the great heat diffused, I would state that during the night I exposed a thermometer in the observatory to the full glare of the fire, when it rose nearly 5°, although placed upward of two thousand feet from the burning buildings and dead to windward of them.

No other meteoric phenomena were observed, the weather remaining unchanged.

BRECKENRIDGE, MINNESOTA.

[*Official Number*, 82.]

Latitude	46° 16′
Longitude	96° 38′
Elevation of barometer above sea-level	966 feet.

The location of the office remains unchanged since last report. It is the best that can be obtained in the place, and affords good exposure for the several instruments. The building occupied is a frame one, and not well adapted for the comfort or convenience of the observer, and it is recommended that suitable provision be made before another winter to protect the observer from the inclemency of the weather. As reports are not received here from other stations, bulletins are not issued.

Sergt. C. A. Shaw remains in charge, and has rendered all reports in a satisfactory manner. He reports that much interest is manifested by travelers in the working of the office and the different instruments. Strangers in passing through the town seldom fail to call at the office.

Digitized by Google

BUFFALO, NEW YORK.

[*Official Number*, 33.]

Latitude	42° 53′
Longitude	78° 55′
Elevation of barometer above sea-level	662 feet.

No change has been made in the location of the office at this station during the year, nor is any considered necessary, as the present one is in the business center of the city. Reports from fifty-five other stations are received here and published in the regular manner, in the form of maps, bulletins, and press reports. During the year five thousand four hundred and one manifold maps, six thousand four hundred and seventy-two bulletins, and one thousand and sixty-two press reports have been issued. In addition to this issue one thousand five hundred and forty-nine copies of the Synopsis and Probabilities were made on manifold forms and posted with the regular bulletins before July 22, on which date the issue of post-office bulletins was commenced to one hundred and fifty-three offices. Two copies are furnished each office daily, and the total number issued to date is twenty-one thousand four hundred and twenty. The leading newspapers publish the tabulated reports and also the monthly abstracts, while all of them print the latest Probabilities received.

The meteorological committee of the board of trade continues to assist the office whenever practicable, and its members retain their interest in the service. Sergt. William McElroy was relieved from charge of the station January 24, and reduced to the ranks for failing to render his mail reports regularly. He was succeeded by Sergt. W. H. Colesberry, who has given satisfaction by the promptness and regularity with which all reports have been made. Privates T. A. Taylor and D. O'Leary have been called in successively from this station during the year for promotion, and both passed the required examination. Four assistants are now on duty, and are kept steadily employed in getting out the various publications of the office and attending to their daily distribution. The station was inspected in March, and some slight irregularities discovered in the records, which were attributed to the neglect of Sergeant McElroy.

The instrument-shelter was also found defective, and as soon as the necessary arrangements could be made a new one was built on the roof of the office-building in accordance with the plan adopted by this office. Twenty-seven cautionary signals have been displayed during the year, of which the observer reports thirteen fully, and seven partly, justified at the station. The observer remarks as follows in reference to the result of these warnings:

October 15–16, 1872.—The cautionary caused considerable apprehension, as the barometers had fallen rapidly in the previous eight hours, and was therefore generally observed, no vessel leaving the harbor during its display.

October 30–31, 1872.—The signal caused much comment among "lake-men," quite a number of vessels being ready to go out, but were detained on account of the signal until the morning of the 31st.

November 7–8, 1872.—The storm very severe; all vessels remaining in port during the display. One barge, with all on board, was lost while trying to make the harbor in the morning.

November 13–15, 1872.—Generally observed by lake-men. Two vessels attempted to leave the harbor but failed. The wind blew a gale on the lake, its velocity being one-third greater than that shown by the anemometer on shore.

November 27–28, 1872.—Gale very severe, but the wind being from southwest for several days previous, and no vessels leaving port, only those bound in were caught.

Digitized by Google

November 30–*December* 4, 1872.—These cautionaries were generally heeded. Owing to ice in the upper lake few vessels had left this port during the week. The captains of two vessels stated that they escaped danger by the display of the signal. Most vessels are laid up for the winter.

May 7–9, 1873.—Signal heeded by mariners, no vessels leaving port during the display.

September 12–13, 1873.—No vessels left port on account of signal.

September 15–16, 1873.—Signal attracted much attention from every one. A fleet of twenty-three vessels remained in port on account of the signal, which caused much excitement and anxiety among mariners.

BURLINGTON, VERMONT.

[*Official Number*, 45.]

Latitude	44° 29′
Longitude	73° 15′
Elevation of barometer above sea-level	223 feet.

The location of this office has not been changed since last report. No reports from other stations are received here, and, consequently, no bulletins are issued. The local observations and the monthly abstracts are printed regularly by the several newspapers published at the station.

The Synopsis and Probabilities are received irregularly and copied by the observer on the proper manifold form and posted with his local reports.

The station was inspected in December, 1872, and numerous irregularities found. As these appeared to have been caused by the youth and inexperience of the observer, Sergt. George H. Ellery, he was retained on duty upon the recommendation of the inspecting officer, and since that date his reports have been regularly and properly rendered.

The members of the meteorological committee express themselves as desirous of doing anything in their power to promote the interests of the service.

The records of the office have been twice used during the year as evidence in legal cases.

There is no assistant on duty at this station, and as the observer's health had become impaired by his close attention to duty, Sergeant Fee was sent to relieve him for one month from July 1, and he was permitted to rest for that period.

CAIRO, ILLINOIS.

[*Official Number*, 53.]

Latitude	37° 00′
Longitude	89° 10′
Elevation of barometer above sea-level	352 .2 feet.

No change has been made in the location of the office since last report. Reports from fifteen river-stations are received and bulletined each afternoon when the telegraphic communication is perfect, but none are received in the morning or at midnight.

Three hundred and ninety-eight reports of local observations have been furnished the local press, and one thousand nine hundred and two bulletins of river reports posted in appropriate places. The river observations have been continued daily during the year, the top of the levee being used as the bench-mark, and the zero of gauge fixed at the point reached by the extreme low water of December, 1871. The range

Digitized by Google

between this point and high water of 1867, which reached the top of the levee, is fifty-three feet.

The station has not been inspected since the date of last report.

Sergt. Thomas L. Watson was relieved February 18, 1873, for neglect of duty, and was succeeded by Sergt. D. W. Harnett, who left the station without authority, and was reduced to the ranks while absent. He was subsequently apprehended, tried, and found guilty of desertion, and is now serving out his sentence for that crime. Sergt. E. Garland was ordered to succeed him, and is now at the station. His reports are not promptly rendered, and it is intended to relieve him unless a change for the better is made.

Private James M. Watson was ordered in for promotion April 1, and after going through the regular course at Fort Whipple passed a satisfactory examination, and was succeeded by Private E. F. Brady, who still remains and has given satisfaction.

CAPE MAY, NEW JERSEY.

[*Official Number*, 54.]

Latitude	38° 56′
Longitude	74° 58′
Elevation of barometer above sea-level	14.2 feet.

The location of the office at this station remains unchanged. No reports are received here from other stations, the station being used, as during the last year, for observation and report and the display of cautionary signals only. Owing to the present defective telegraphic arrangements much delay has been experienced in the transmission of the regular reports, the midnight ones, with few exceptions, being delayed until the following morning. The papers published at this station are furnished with the local observations daily during July and August, and weekly during the rest of the year.

Sergt. T. F. Townsend remains in charge of the station, and has rendered all his mail reports promptly and in good shape. The station was inspected in January of the present year, and instruments and records reported by the inspector in good condition.

Thirty-six cautionary signals have been displayed during the past year, and of this number twenty-one are reported as justified at the station. In reference to these signals the observer remarks as follows:

October 24–26, 1872.—Wind blew in heavy squalls during the afternoon and evening of the 25th.
January 5–6, 1873.—Tornado twenty miles up the coast at 3 p. m. of the 5th.
January 16–17, 1873.—Heavy squalls, with rain.
January 23–25, 1873.—Wind in heavy squalls.

No signal orders can be sent to this station after 7 p. m., as the telegraph-office closes at that hour.

There is a great demand for the Probabilities among the guests at the several hotels during the watering season, but the local papers are unable to obtain them on account of the early closing of the telegraph office.

The following is an extract from the semi-annual report of the observer for the six months ending July 1, 1873, in reference to the interest manifested in the service at this place:

Owing to the uniform correctness of the prognostications, public interest is largely on the increase and corresponding benefits derived. The buildings in this locality

Digitized by Google

being entirely of wood, a large amount of labor and material, particularly in paint, is annually saved by the forecasts and signals.

I find also a growing confidence in the cautionary signals among sea-faring men, and a more thorough knowledge in the use of their meteorological instruments than has heretofore existed.

CHARLESTON, SOUTH CAROLINA.

[*Official Number*, 21.]

Latitude	32° 45′
Longitude	79° 55′
Elevation of barometer above sea-level	61.4 feet.

The office remains unchanged since last report. Owing to the want of proper telegraphic facilities no reports from other points are received here at present. The monthly summaries and the local observations are regularly furnished to, and published by, the daily papers. Twelve cautionary signals have been displayed at this point, six of which are reported as fully justified at the station.

The observer remarks as follows upon some of these signals:

October 23–24, 1872.—Several vessels remained in harbor on account of the signal.
March 19–20, 1873.—No vessels left port during the display.
April 1-2, 1873.—A fishing-boat upset in Ashley River, and one man drowned.

Sergt. J. E. Evans, who was in charge at the date of last report, was relieved in October, for the benefit of his health, which had become impaired by close attention to duty. He was succeeded by Sergt. M. L. Hearne, who still remains, and has given satisfaction.

Privates Sidney Powell and Thomas Cleary have been called in successively for promotion, and passed the required examination satisfactorily. Private J. J. Nanry is the present assistant, and is commended by the observer for his good conduct. A lively interest in the service is manifested by the merchants and other business men at this station, and regret is expressed at the non-receipt of full reports from other coast-stations and those in the interior of the Southern States. The telegraphic service, so far as the transmission of the local reports are concerned, has been performed satisfactorily.

CHEYENNE, WYOMING TERRITORY.

[*Official Number*, 68.]

Latitude	41° 12′
Longitude	104° 42′
Elevation of barometer above sea-level	6,058 feet.

No change has been made in the location of this office since last report, the present location being a very desirable one.

The reports from Santa Fé and Denver are transferred here east and west. Seven hundred and fifty-two bulletins have been issued during the year and two hundred and eight reports, together with the local observations furnished the press.

Sergt. A. C. Dobbins remains in charge, and has given general satisfaction by the promptness and regularity with which reports have been rendered. He was unable to take observations on the 7th, 8th, and 9th of May on account of sickness, and as the instructed civilian assistant had left the station, the record would have been interrupted but for the courtesy of the post surgeon at Fort D. A. Russell, who

Digitized by Google

made observations at that post and furnished copies of the same to the observer, thus enabling him to complete his record.

To guard against the recurrence of such accidents, Private M. H. Perry was ordered to the station as an assistant, May 8, 1873, and still remains. His conduct is commended by the observer.

CHICAGO, ILLINOIS.

[*Official Number*, 37.]

Latitude	41° 52′
Longitude	87° 38′
Elevation of barometer above sea-level	657 feet.

The office was moved June 19, 1873, to a building on the corner of Madison and La Salle streets, in order to get it nearer the several telegraph offices. Two rooms are occupied, giving fine facilities for the work of this station, which has largely increased during the year, and is still performed under some of the disadvantages resulting from the disastrous fire of 1871. Full reports from seventy-five regular stations are received here, besides the special reports from the river-stations when they are made. These reports are published in the regular manner, and during the year thirteen thousand six hundred and ninety-two maps have been printed and distributed, two thousand two hundred and forty bulletins issued and posted, and two hundred reports furnished to the press. The issue of post-office bulletins to seven hundred and ninety-eight offices began June 17, and since that date one hundred and sixty-eight thousand seven hundred and thirty-two copies have been sent out. As the matter for these bulletins is seldom received before 2 o'clock a. m., and the copies ready for mail must be in the post-office by 5 a. m., the work is necessarily done with great rapidity, and in view of these facts the accuracy and regularity with which the issue is made deserves commendation. Considerable difficulty has been experienced in the receipt and transfer of reports, owing to the frequent interruption of one or more of the telegraph lines over which they should be received, and the consequent necessity of transferring them to some other office with as little loss of time as practicable, especially at midnight, when every minute is of importance. The different telegraph-offices have to be visited regularly at report hours, and their condition ascertained, and the action of the observer governed by the information thus received. His instructions on this subject are as follows:

When the regular Atlantic and Pacific circuit to New York is interrupted, all reports received will be sent by Pacific and Atlantic circuit to Cincinnati, and the observer at that point notified that communication cannot be had with New York. If this latter circuit is also down, the reports will be sent by the Western Union to the observer in New York, if that route is open, and when it is not, will be filed in the Western Union Office, addressed to the Chief Signal-Officer at Washington, to be sent by any available route at the disposal of the company.

Reports for Saint Louis and Cincinnati will be sent to those points by the Western Union whenever the regular Pacific and Atlantic circuits are broken. Reports for Milwaukee will be sent by the Western Union whenever the Great Western lines to that point are down.

Some few delays have occurred from a natural reluctance on the part of operators to admit that their wires were down, and some from other causes; but, as a whole, this part of the work has been well performed by all parties.

The station was inspected in April of this year, and such irregulari-

Digitized by Google

ties as were found to exist pointed out and corrected. Several changes have been made during the year in the management of the station, Sergt. Theodore Mosher being transferred to the central office January 2, 1873, and Sergt. A. C. Ford, his successor, to Nashville, Tenn., May 1, 1873.

Sergt. W. S. Kauffman has been in charge since the last-named date, and has given satisfaction by the prompt and accurate manner in which his various duties have been performed, under circumstances of unusual difficulty.

Of the assistants who have been on duty here during the year, one (Private J. D. M. Fee) was called in for promotion, and after going through the usual course of instruction at Fort Whipple passed a satisfactory examination; one was called in for misconduct; one (Private H. R. Pullan) deserted; one was discharged; one transferred to another station, and one to the central office. Six regular assistants are now on duty, and kept busily employed in getting out and distributing the large daily issue of maps and bulletins.

A lively interest is manifested in the service among all classes of citizens, and the labors of the office are properly appreciated.

Thirty-eight cautionary signals have been displayed during the year, of which twenty are reported fully justified, and two partly justified, at the station. In this connection the observer remarks as follows:

October 15–16, 1872.—Gale much more severe on the lake than at the port. Many vessels remained in harbor on account of the warning; but six or seven which went out while the signal was flying were compelled to return during the night.

October 28–31, 1872.—The office was visited by twenty-eight captains of vessels and owners during the display of the signal, more than half of whom stated that they remained in port on account of the warning given.

November 4–6, 1872.—The wind blew in heavy gusts, and was more severe out on the lake. The office was visited by many captains of vessels and others interested, and many vessels remained in port on account of the warning.

November 6–8, 1872.—The wind blew in gusts and was severe on the lake. The office was visited by a number of captains, and many staid in port on account of the warning given.

November 13–14, 1872.—Numbers of vessel-men called at the office, many of whom stated that they delayed their departure on account of the signal.

November 26–28, 1872.—This gale is represented to have been one of the most severe ever experienced on the lake. One schooner known to have delayed her departure on account of the warning. The office as usual was visited by numbers of seamen.

December 7–10, 1872.—But few vessels leaving port now. One schooner reported to have remained in port on account of warning.

April 3–7, 1873.—Storm of wind, snow, and rain.

April 21–23, 1873.—Propeller detained in harbor by the signal, which was justified.

September 17–18, 1873.—The wind was much heavier on the lake than at the port. Many vessels remained in, and those which attempted to go to sea were compelled to return. The papers make mention of numerous vessels damaged by the storm.

September 24–25, 1873.—The weather was bad, and several captains of vessels called at the office, who were detained by the signal, and with good effect, as news has been received of the loss of at least one vessel on the lower part of the lake.

September 26–27, 1873.—For a southwest gale and the season of the year, it is said to be unusually severe. The papers contain accounts of numerous injuries to vessels that were caught in the blow, several of which were wrecked on the east shore. A number of vessels remained in port, and probably escaped damage.

The leading newspapers publish reports regularly, and since the issue of post-office bulletins commenced have received, through the energy of the observer, the latest one sent to him from the central office in Washington.

Digitized by Google

CINCINNATI, OHIO.

[*Official Number*, 65.]

Latitude	39° 06′
Longitude	84° 26′
Elevation of barometer above sea-level	614 feet.

The location of the office of this station has not been changed since last report, but through the liberality of the members of the chamber of commerce a second room, rendered necessary by the increased amount of work thrown upon the station, has been added and furnished at a mere nominal expense to the Government.

Reports from thirty-one other stations are received here in the morning, and the same number in the afternoon, with the addition of those from the special river-stations during the spring and fall months. At midnight seventy reports are received for the map, which is printed and distributed each morning by 7 o'clock a. m. Most of these reports are transferred to Washington as received, which materially increases the work of the observer, who is obliged to keep himself constantly informed of the condition of the telegraph-lines in order that he may not lose valuable time at the moment for action. When the regular circuits are not working from any cause, the observer is instructed to transfer all reports promptly to any available line that will transmit them promptly to their destination.

During the year, eighteen thousand three hundred and one maps, and seven thousand six hundred and sixty-one bulletins have been issued, and two thousand three hundred and thirty-seven reports furnished to the press. The issue of post-office bulletins to seven hundred and fifty-three offices was commenced April 7, 1873, and up to date two hundred and sixty-four thousand five hundred and two copies have been printed and mailed, two copies being sent to each office. As the mail closes at 5 o'clock a. m., this part of the work requires to be done promptly and with system. No instance has been reported where these bulletins were printed too late for the mail, which speaks well for the conduct of the men charged with the duty.

River observations are made regularly, and during the year one thousand eight hundred and eighty-three river-bulletins have been posted on the appropriate form.

The bench-mark, from which measurements are made, is the extreme low-water mark of September 15, 1858, which was twenty inches above the bed of the river. The leading newspapers publish full tabulated reports daily in excellent form, and also the latest Probabilities received, together with the monthly abstracts and the Weekly Weather Chronicle. At no other station has the press taken a livelier interest in the service or done more to promote its usefulness.

The monthly abstracts of the weather prepared by the observer are models of meteorological forms, both in appearance and contents, and it is hoped they will be followed at all stations where the press is willing to publish them.

Sergt. E. F. Maynard was in charge until May 16, 1873, when he deserted, while under the influence of liquor, and was succeeded by Sergt. Theodore Mosher, who is still in charge and has performed his various duties in an unusually able and intelligent manner. He is highly spoken of by the meteorological committee of the chamber of commerce, by the members of the press and the general business men with whom he is daily thrown in contact. Twice during the year Sergt. N. Gorom

Digitized by Google

was in temporary charge on occasions when Sergeant Maynard was unable from sickness to perform his duties. Of the assistants on duty during the year, one was called in for misconduct, one transferred to Fort Whipple as orderly sergeant, one, Private Edwin Booth, ordered in for promotion, and one, Private Martin Evans, committed suicide while temporarily absent from station on leave. At present there are six assistants on duty, one of whom is a sergeant, sent to relieve the observer of a portion of his responsibility. During the industrial exposition held at Cincinnati through the month of September, the morning Probabilities were sent from the central office to Sergeant Mosher and printed by him daily in the exposition building, on a press kindly furnished for the purpose by the executive committee.

A full set of standard station-instruments was also sent him for exhibition and excited favorable comment from the visitors and the press.

These instruments were sent to Chicago at the close of the exposition for display there. Two extra assistants were furnished the station during the exposition, and were ordered to other points at its close.

The members of the meteorological committee of the chamber of commerce are entitled to the thanks of the Chief Signal-Officer for their uniform kindness to the observers individually, and for the public-spirited interest they have constantly manifested in the service.

The station has been twice inspected during the year, once in November, 1872, and again in April, 1873. On both occasions it was found in good condition, with records neatly kept and up to date.

CLEVELAND, OHIO.

[*Official Number*, 34.]

Latitude	41° 30′
Longitude	81° 47′
Elevation of barometer above sea-level	682.7 feet.

The office was moved April 30, 1873, upon the recommendation of the inspecting officer, to the third story of the National Bank building, on the corner of Water and Superior streets, where two rooms are occupied, affording ample space for the station work.

The roof exposure for instruments and the display of cautionary signals is an excellent one.

Reports from fifty-five other stations are received here and published in the regular manner, manifold maps being issued daily.

During the year two thousand one hundred and thirty-seven maps and three thousand three hundred and ninety bulletins have been issued, and seven hundred and two tabulated reports furnished to the press, in addition to a daily abstract of the local observations.

The greater part of this work was done after the relief of Sergt. J. N. Martin, March 18, 1873, as under his charge the station fell into general disrepute and the work was grossly neglected. He was relieved upon the recommendation of the inspecting officer and ordered to Fort Whipple, where, after reduction to the ranks, he was discharged the service. Sergt. L. M. Crist was transferred to the station from Rochester, where he had been serving creditably as an assistant, and by his energy and tact soon inspired new interest in the service, and by his promptness in furnishing reports to the press secured their regular publication in tabulated form.

Becoming insubordinate he was ordered to Fort Whipple, but deserted before reaching that post. He was succeeded May 1 by Sergt.

Digitized by Google

Will Stromberger, who still remains in charge and has given satisfaction both to the central office and to the citizens. One assistant has been transferred to the central office and one ordered in for promotion, but has not yet completed the regular course of instruction at Fort Whipple. Private M. L. Landers, the present assistant, is commended by the observer for his good conduct.

The station has been twice inspected since the last report, once in October, 1872, and again in March, 1873. At the last inspection numerous grave irregularities were discovered, which led to the relief of the observer as before stated.

Instruments and records are now reported to be in good condition.

Twenty-five cautionary signals have been displayed during the year, of which number fourteen are reported as justified at the station.

In reference to these displays the observer remarks as follows:

October 15–16, 1872.—Several vessels left the harbor about 11 p. m. of the 15th, and about 2 a. m. of the 16th encountered a severe wind and were compelled to return to port to escape accident.

November 7–8, 1872.—Reports from the lake state the wind was very severe and several vessels received more or less injury before they were able to reach harbor. The display of the signal was the means of keeping many vessels in port that would otherwise have left in the afternoon and thereby been exposed to imminent danger.

November 13–14, 1872.—A heavy wind commenced about 1 a. m. of the 14th, which from the statements of captains of vessels must have been much greater than thirty miles per hour. Several vessels that left the harbor contrary to the warning were compelled to return to the harbor, where they arrived with much difficulty and narrowly escaped serious injury.

November 24–25, 1872.—Signal justified. No vessels are now leaving port, navigation being about to close, and none will again leave until the opening of navigation in the spring.

November 28–*December* 1, 1872.—The wind was very severe on Lake Erie. One vessel near the port is supposed to have been lost. All the vessels in the harbor are laid up for the winter.

April 15–18, 1873.—No damage reported. It is stated that the lake was made very rough by "cat squalls." Navigation not yet opened.

September 15–16, 1873.—Several schooners remained in port because of the warning, the captains of which stated that they always worked by the signal. Four schooners went out but had to put back, reaching port about midnight, the captains of which immediately came to the office to learn the prospects.

September 17–18, 1873.—One steamer and several schooners remained in port on account of the warning.

A gratifying amount of interest is at present manifested in the service by the members of the meteorological committee, by the press, and by the citizens generally.

The editors of the several morning papers have recently effected an arrangement with the Atlantic and Pacific Telegraph Company, by which they receive regularly, in time for publication, the midnight Synopsis and Probabilities issued from the central office.

CORINNE, UTAH.

[*Official Number*, 70.]

Latitude	41° 30′
Longitude	112° 18′
Elevation of barometer above sea-level	4,249 feet.

The office was moved temporarily on November 2, 1872, to a small house in the upper part of the city, and on December 3, 1872, to its present location on Montana street, between Sixth and Seventh streets.

Sergt. S. W. Beall remains on duty and manages the station alone. He has rendered all reports regularly and promptly, and in a satisfac-

Digitized by Google

tory manner. Reports from nine other stations are received here irregularly, of which two are transferred to the Chicago circuit.

During the year three hundred and four bulletins have been issued, and two hundred and thirty-three reports of local observations furnished the press.

The station has not been inspected since the date of the last report, and the present condition of the office is therefore unknown.

DAVENPORT, IOWA.

[*Official Number*, 51.]

Latitude	41° 30′
Longitude	90° 38′
Elevation of barometer above sea-level	603.3 feet.

No change has been made in the location of the office during the year, nor is any considered necessary at present, as it would be difficult to find another possessing the same advantages.

Reports from twenty-nine regular stations are received here, and during the spring and fall from all the special river-stations.

Three thousand four hundred and thirty-five bulletins have been issued and ninety-three reports furnished the press. In addition to this number one thousand two hundred and three river-bulletins have been issued and furnished the press.

The gauge used for the river observations was constructed by Colonel Macomb, United States Engineers, on the pivot on draw-bridge pier of the Government bridge, between Davenport and Rock Island. It is in the Davenport channel, and is cut in the stone-work and painted in black and graduated into feet and tenths. Its zero-point is the low water of 1863, the lowest water known.

The station was inspected in June of this year, and the instruments and records found in such bad condition that the observer in charge, Sergt. Max Marix, was at once relieved from duty and discharged the service. He was succeeded by Sergt. S. P. Ruthven, June 19, since which date a marked improvement has been observed both in the form and promptness with which reports are transmitted. One assistant has been transferred during the year to the central office, and one, Private T. S. Collins, called in for promotion and passed the required examination satisfactorily. Private B. E. Light is the present assistant, and is favorably mentioned by the observer.

The local observations, river-reports, and monthly abstracts are furnished regularly to the press and usually published.

Mr. Dalzell, the chairman of the meteorological committee, has displayed a marked interest in the welfare of the service, and done all that laid in his power to promote its usefulness.

The telegraphic service from this station has been of the most unsatisfactory nature, and it is to be hoped that an improvement will be made in this respect at an early date.

DENVER, COLORADO.

[*Official Number*, 76.]

Latitude	39° 44′
Longitude	104° 58′
Elevation of barometer above sea-level	5,135 feet.

The office was removed March 15, 1873, to the Woodward building, on Holliday street, between Fifteenth and Sixteenth streets, to get a bet-

Digitized by Google

ter exposure for the instruments than could be obtained at the former location, and to get it nearer the telegraph-office, which is located in the same building. The present office is on the third floor of the building, is 14 by 20 in size, and has two windows facing the northwest, from one of which the instrument-shelter projects. The shelter was removed from the old office, and put up again without injury or expense to the Government.

The station was inspected in November, 1872, and all instruments and records found in good condition.

Sergt. Henry Fenton still remains in charge, and has forwarded all mail reports with commendable promptness and in a creditable shape. The morning and midnight telegraphic reports have most of the time failed to reach the central office on time, owing to the present unsatisfactory telegraphic facilities. No reports are received here from other stations, and therefore no maps or bulletins are issued.

During the year, seven hundred and eight reports of local observations have been furnished the press. There is no assistant at this station. Sergeant Fenton's experience and knowledge of the country have been of service to the central office in the work of establishing the station upon Pike's Peak.

DETROIT, MICHIGAN.

[*Official Number*, 36.]

Latitude	42° 21′
Longitude	83° 07′
Elevation of barometer above sea-level	656.3 feet.

No change has been made in the location of the office since the date of last report. Reports from fifty-five other stations are received here and published in the usual manner on manifold maps and bulletins and in press reports.

During the year three thousand five hundred and nineteen maps, six thousand seven hundred and fifty-eight bulletins have been issued, and seven hundred and four press reports furnished for publication. The regular issue of post-office bulletins to three hundred and thirty-seven offices was commenced July 21, since which date forty-seven thousand eight hundred and fifty-four copies have been sent out.

Before the work of printing the Synopsis and Probabilities was commenced two thousand and fifty-two copies of them were manifolded and posted with the regular bulletins.

Reports from two other stations are received here for transfer to the New York circuit.

The station was inspected in April, 1873, and the records and instruments found in good condition, although the conduct of Sergt. F. Mann, the observer, was such that his relief was recommended by the inspector and immediately ordered. Sergt. William Finn took charge of the station April 5 and still remains, having given satisfaction by the manner in which his duties have been performed.

Two assistants have been relieved during the year for misconduct, and one, Private Will Stromberger, called in for promotion, and passed the required examination.

Four assistants are now on duty and are all kept busy in getting out the various publications of the office.

Twenty-nine cautionary signals have been displayed during the year of which six are reported as justified at the station.

Digitized by Google

The observer remarks, in reference to these displays, as follows:

November 27–28, 1872.—The wind was gusty and boisterous, making a rough river.
November 28–30, 1872.—The wind gusty and boisterous, making a rough river.
April 30–*May* 3, 1873.—According to dispatches received from points on Lake Huron, the wind is reported to have been blowing a gale there.
May 6–9, 1873.—Newspaper reports state that there was very heavy weather, with violent southwest wind outside of this on Lake Huron on the 7th.

The leading newspapers publish the tabulated reports more or less fully, the monthly abstracts, and the latest Probabilities received at the station.

The interest in the service has been largely increased since the issue of the post-office bulletins brought the work of the office more directly before the people of the State.

DUBUQUE, IOWA.

[*Official Number*, 98.]

Latitude	42° 30′
Longitude	90° 45′
Elevation of barometer above sea-level	665 feet.

The office is located in Sullivan's block, in the business center of the city, corner of Maine and Sixth streets. The building being higher than any of the surrounding ones, its roof affords a very good exposure for the several instruments. The instrument-shelter is of the authorized form, facing north. The station is supplied with two full sets of the standard instruments, all of which are reported in good condition. The station was established by Sergt. Robert J. Bell, who began taking regular observations on July 10, 1873.

This station is one of observation only, and no reports are forwarded to this office by telegraph, except occasional mid-day observations, in accordance with instructions on this subject.

No reports are received here from other stations, and therefore no maps or bulletins are issued. The local observations are furnished regularly to the press.

A river-gauge has been constructed by the observer, who is instructed to make regular daily observations, and report them by telegraph to Saint Louis over the regular circuits. The gauge is located at the foot of Seventh street, and its zero point is low-water mark of October, 1864, and is 21 feet 10 inches below the high-water mark of April 22, 1870. The average depth of water in the channel is 18 feet below low-water mark of 1864.

The station was inspected in August of the present year, and the instruments and records found in the "best possible condition."

Much interest is manifested in the service by all classes of citizens at this place, and an earnest desire is expressed for the receipt of reports from other stations.

DU LUTH, MINNESOTA.

[*Official Number*, 40.]

Latitude	46° 48′
Longitude	92° 06′
Elevation of barometer above sea-level	642.7 feet.

No change has been made in the location of this office during the past year. Sergt. John Dascomb, who was in charge at the date of

Digitized by Google

the last report, was transferred, on his own request, to Vicksburgh, Miss., October 4, 1872, and was succeeded by Sergt. R. R. Martin, who still remains in charge.

The station was inspected in May of the present year, and found in a creditable condition.

Upon the interest in the service manifested by the observer, the inspector remarks: "The observer's journal shows that during the notable storms extra observations have been made by him, and in one case hourly observations for a period of fifteen hours."

Upon the recommendation of the inspector, Private Addison Slamm was sent to the station as assistant May 2, 1873, and is favorably mentioned by the observer for his attention to duty.

No reports are received here, and therefore no maps or bulletins are issued. The press is furnished with the monthly summaries and the local observations, but the former only are published at present.

During the past year twenty five cautionary signals were displayed, and of this number fourteen are reported as justified at the station. The following remarks are made by the observer upon incidents connected with these signals:

November 9–12, 1872.—The schooner Monitor was ready to sail, but remained over twenty-four hours on account of storm-signal flying.

November 13–14, 1872.—This has been the severest storm felt here in a long time Three schooners and one steamer were driven ashore, and two of the schooners wrecked. The breakwater and the freight warehouses, docks, &c., of the Northern Pacific Railroad Company and elevator damaged

December 12–15, 1872.—Signal justified—wind, accompanied by snow.

Considerable interest is manifested in the service by the business community of this place, as the following extract from the observer's semi-annual report for the six months ending July 1, 1873, will show:

Judging from the increased interest manifested, the service appears to have made a rapid stride in the public favor. Very few captains of vessels leave this port without first coming or sending to this office for information concerning the probable character of the weather.

Early in January last I was called on by the resident engineer of the Northern Pacific Railroad Company, who informed me that a regular series of meteorological observations was about to be commenced under the auspices of that company at various stations along the line of their road, these observations to be alike in all respects with those of our service. I gave all the information and instructions necessary for the work, and urged the importance of having them taken synchronously with those of the signal-service. According to this arrangement, stations were established at Brainard, Minn., and Fargo, Dak., and copies of the report furnished to the central office.

The weekly reports from the stations referred to above have been regularly received at the central office, and form a valuable addition to its records.

EASTPORT, MAINE.

[*Official Number*, 94.]

Latitude	44° 55′
Longitude	66° 54′
Elevation of barometer above sea-level	61.25 feet.

The office is located in the custom-house, in the business center of the town. The bay is one square directly east of the building. The exposure for roof-instruments and thermometers is as good as can be obtained. The instrument-shelter projects from a window facing north.

The station was opened April 1, 1873, by Sergt. W. C. W. Shreck, who still remains in charge.

Digitized by Google

Private Daniel C. Murphy was ordered to this station as assistant July 22, 1873.

All reports have been forwarded promptly by mail, and the general management of the station has been satisfactory.

No reports are received here, and therefore no maps or bulletins are issued.

Ten cautionary signals have been displayed since the station was established, of which five are reported as justified at the station.

Much interest is taken in the service by mariners, and the observer reports two cases where captains put in from sea in passing by Eastport to ascertain whether the cautionary signal was flying or not.

The station was inspected in September, 1873, and is reported in good condition.

ERIE, PENNSYLVANIA.

[*Official Number*, 97.]

Latitude	42° 07′
Longitude	80° 03′
Elevation of barometer above sea-level	671.5 feet.

The office is located in a three-story brick building on the corner of State, the principal business street of the city, and the instruments have as fair an exposure as can be obtained. The instrument-shelter is of the authorized pattern, and projects from a window of the office-room facing north. Sergt. E. F. McComas opened the station on May 25, 1873, and remains in charge. Previous to August 4, 1873, no reports were sent by telegraph to the central office, and none were received from other stations, and therefore no maps or bulletins were issued.

Since the above-mentioned date, however, reports are received from fifty-five stations, and three hundred and fifty maps and eight hundred and five bulletins have been issued, and the local observations, together with the bulletins, furnished the press and published regularly. On account of the increased work, an assistant, Private H. L. L'Eesterre, was ordered to this station August 2, 1873. The station was inspected in August, 1873, and everything found in creditable shape. Three cautionary signals have been displayed here, one of which is reported justified at the station.

Much interest is manifested in the service at this station by members of the press and the business community.

ESCANABA, MICHIGAN.

[*Official Number*, 49.]

Latitude	46° 44′
Longitude	87° 16′
Elevation of barometer above sea-level	601.6 feet.

The location of the office remains unchanged since last report, but the instrument-shelter has been remodeled and built with double walls of lattice-work, to guard against the effect of radiation from adjoining walls. No reports are received here from other stations, and consequently no maps or bulletins issued, but the local observations are furnished to the Weekly Tribune, in tabulated form, and regularly published. The station has been inspected twice since last report—once in October, 1872, and again in April, 1873. At the last inspection the records and instruments were found in excellent condition. Sergt. R. J. Bell was

Digitized by Google

relieved from charge of the station on account of ill-health March 11, 1873, and was succeeded by Sergt. J. H. Garrard, who remained until ordered in and reduced to the ranks, for neglect of duty in failing to forward his mail reports promptly. Sergt. Edward Lloyd is now in charge, and has given satisfaction.

Private A. J. Berry was ordered to the station as an assistant November 18, 1872, and still remains, having performed his duties in a commendable manner. In compliance with urgent requests from the citizens of the station and of ship-owners at other points on the lakes, it was fitted up for the display of cautionary signals soon after the last inspection.

The first signal was ordered up May 18, but owing to some difficulty in the telegraph line was not received at the station. Since that date three others have been ordered, one of which was reported as not justified at the station.

There is no meteorological committee at this station; but one of the citizens, Mr. S. C. Baldwin, connected with the Chicago and Northwest Railroad, has shown a marked interest in the service, and done all in his power to assist the observer in making it useful.

FORT BENTON, MONTANA.

[*Official Number*, 71.]

Latitude	47° 52′
Longitude	110° 40′
Elevation of barometer above sea-level	2,674 feet.

No change has been made in the location of the office. As during the previous year, much irregularity has again been experienced in the transmission of the telegraphic reports, chiefly owing to the uncertainty of telegraphic communication in so unsettled and wild a part of the country. Sergt. W. F. Slater remained in charge of this station until September 15, 1873, when he was relieved by Sergt. William McGillivray. Sergeant Slater has given entire satisfaction while in charge of this station, and has rendered all mail reports with the utmost promptness and as regularly as mail facilities would admit. A plain river gauge has been constructed during the year, and the stage of the river reported in the regular afternoon telegrams.

No reports are received here, and therefore no bulletins are issued.

The thanks of the office are due to the commanding officer and to Captain Kirtland, Seventh United States Infantry, for assistance rendered the observer.

FORT GIBSON, CHEROKEE NATION.

[*Official Number*, 93.]

Latitude	35° 43′
Longitude	95° 16′
Elevation of barometer above sea-level	511 feet.

The office is located in the second story of a building at the corner of two streets running north and west, respectively, in the village of Fort Gibson. The location is the best that could be obtained, and the instruments are well exposed.

The instrument-shelter projects from a window in the office, and is of the authorized form.

The station was opened on the morning of April 1, 1873, by Sergt.

Digitized by Google

Thomas A. Taylor, and reports have been received since then with as much regularity as the limited telegraphic facilities would admit. Some delay has been experienced in getting the mail reports from this station, and the observer has been repeatedly reprimanded for his shortcomings in this respect.

No reports are received here, and consequently no bulletins are issued. The local observations are furnished to and published by a weekly paper printed in the English and Cherokee languages.

FORT SULLY, DAKOTA.

[*Official Number*, 83.]

Latitude	44° 39′
Longitude	100° 40′
Elevation of barometer above sea-level	1687.8 feet.

The office at this station remains unchanged. Telegraphic communication has been frequently interrupted during the year, in one instance for nearly a month, owing to the unprotected and poor condition of the line. The telegraph-office was finally abandoned by the Northwestern Telegraph Company, whose property it is, on September 5, 1873, and has not since been re-occupied. Sergt. George Prendor remained in charge until September 29, 1873, when he was relieved by Sergt. William Ramsay, with a view to transfer to a more important station. The station was inspected in July of the present year and found in proper condition. The inspector remarks in his reports: "The books and papers were found in a condition unsurpassed by no other station in neatness and accuracy, and have been so kept under exceedingly difficult circumstances."

A river-gauge has been constructed during the year, and the stage of the water reported in the regular afternoon telegrams. The distance of the river from the fort is nearly a mile and a half, and the observer remarks in his semi-annual report: "The performance of this duty (taking river observations) exposes the observer to a twofold danger—the rifle and arrow of the Indian, or drowning. Examples are too numerous of the grave risks that attend a defenseless white in the thick undergrowth on the confines of the river, and I am the only person who ventures there unarmed." No reports are received here and consequently no bulletins are issued.

The office is indebted to Gen. D. S. Stanley, colonel Twenty-second Infantry, for continued interest and a constant effort to afford all possible facilities to the observer.

The present observer has a sufficient practical knowledge of telegraphy to act as operator in addition to his other duties, and it is expected that the transmission of reports will be resumed at an early date.

GALVESTON, TEXAS.

[*Official Number*, 55.]

Latitude	29° 18′
Longitude	94° 33′
Elevation of barometer above sea-level	40.2 feet.

The location of the office remains unchanged since the date of last report. No reports are received here from other stations, and no maps or bulletins issued. The local observations are furnished the newspa-

Digitized by Google

pers, and published by them during the summer season, and the amount of rain-fall and a monthly abstract of the climatology of the station regularly.

Sergt. E. O. C. McInerney remains in charge of the station, and has performed his duties satisfactorily, and rendered all reports promptly and regularly. A series of interesting experiments made by him, in reference to rain-fall at different elevations, has produced unexpected results, as each weekly report has shown a greater amount of rain collected at fifty feet above the ground than at the surface, the gauges used being duplicates of the standard signal-service pattern. Privates J. E. Cook and B. C. Anderson have been called in, successively, for promotion, and passed the required examination. Private William O. Belt was transferred to the station as an assistant April 10, 1873, and died of yellow fever September 18, after a brief illness. He was a young man of excellent character and habits, and had discharged his duties in a conscientious and praiseworthy manner.

In consequence of the danger to which an assistant not acclimated would be exposed at this season of the year, none will be sent to replace Private Belt until later in the season, as the observer is considered fully competent to manage the station alone for a few weeks.

The chairman of the meteorological committee, and the citizens generally, have repeatedly urged the importance to their city of having more reports furnished them from stations to the west and north in the interior of the State. They also desire to receive reports from the Gulf stations to the eastward.

The station was inspected in March of the present year, and found in good condition.

GRAND HAVEN, MICHIGAN.

[*Official Number*, 48.]

Latitude	43° 05
Longitude	86° 15′
Elevation of barometer above sea-level	616.3 feet.

No change has been made in the location of the office during the year. No reports are received here from other stations. The local observations and monthly abstracts of the local weather are occasionally published by the newspapers, but not with sufficient regularity to make them of much service to the public.

The station was inspected in April of the present year and found in fair condition. Several irregularities were discovered and corrected before the inspector left.

Sergt. F. F. Wood remains in charge and is favorably mentioned by the inspector in his report for his sobriety, courtesy, and general behavior.

Sergt. J. H. Garrard was on duty at the station from January 20 to March 11, 1873, during the illness of Sergeant Wood.

The midnight reports are not sent until the succeeding morning, as the telegraph-office is closed at the proper time of sending. The uncertainty of the telegraphic communication also interferes seriously with the prompt transmission of cautionary signal orders, which if sent at night are frequently delayed several hours until the local telegraph-office is opened for business the next day.

Considerable interest is manifested in the service, especially in connection with the cautionary signals, of which thirty-six have been dis-

Digitized by Google

played during the year. Of this number twenty-eight are reported as justified at the station.

In reference to several of these signals the observer remarks as follows:

May 12–13, 1873.—The steamer Saginaw left as usual but returned on account of heavy sea. The Chicago and Milwaukee boats are behind time on account of wind and sea.

September 17–18, 1873.—One vessel remained in port on account of signal.

September 24, 1873.—Quite a number of vessels entered the port for shelter during the display of the signal.

The citizens are desirous of receiving reports from the other lake-stations, but with the present telegraphic facilities it would be impracticable to furnish them at the proper hours.

INDIANAPOLIS, INDIANA.

[*Official Number*, 43.]

Latitude	39° 47′
Longitude	86° 06′
Elevation of barometer above sea-level	746.7 feet.

The location of the office remains unchanged since the date of last report, but arrangements have been made to remove it to another part of the same building early in October, in order to obtain better facilities and more space. Reports from thirty-seven other stations are received here in the morning and afternoon, and from seventy-six stations at midnight—the additional ones being copied as they pass between Cincinnati and Chicago. No maps are printed, but during the year four thousand seven hundred and fifty-five bulletins have been issued, and one thousand nine hundred and eighteen press reports furnished for publication.

Three hundred and twenty-seven river-bulletins and one thousand seven hundred and thirty manifold copies of the Synopsis and Probabilities have also been posted.

Sergt. C. F. R. Wappenhans remains in charge, and has given full satisfaction. All reports have been promptly and properly rendered.

Two assistants have been relieved for misconduct during the year. Private W. D. Halliday, the present assistant, has been on duty since February 10, 1873, and is commended by the observer for his steadiness and intelligence. He was in charge of the station alone for one month during the observer's absence, and rendered all reports in proper form and time.

The leading newspapers print the local observations regularly, and also frequent selections from the general reports and the latest Probabilities received.

The observer speaks in high terms of the courtesy of the telegraph officials, by which he has been enabled to perform his duties under the most favorable circumstances.

INDIANOLA, TEXAS.

[*Official Number*, 84.]

Latitude	28° 32′
Longitude	96° 30′
Elevation of barometer above sea-level	25 feet.

The office remains as at last report, in Schultz's building on Main street. No reports are received here from other stations, and the station is therefore one of observation and report only. The local observations and

Digitized by Google

monthly abstracts are furnished the only paper published here, and are printed in good form.

Sergt. Edward Lloyd was in charge until March 13, 1873, when he was relieved on account of ill health and succeeded by Sergt. Frank Mansfield, who still remains.

All mail reports have been forwarded regularly and promptly, but the telegraphic ones have been frequently delayed by accidents to the line and the closing of the office at the regular reporting hour.

The midnight reports are uniformly held until the next day and forwarded with the morning report, and both are delayed even then several hours because the telegraph-office does not open until the regular business hours of the place.

In reference to the interest taken in the service the observer remarks as follows:

I have noticed that agriculturists appreciate the service even more than the commercial community. One gentleman remarked to me that it depended wholly upon the signal-service whether the sugar-lands of Texas would ever be fully developed or not. In other words, that these lands never could be worked to advantage without the farmers interested had access to the weather reports.

The station has not been inspected during the year, but the observer reports all instruments and records in good condition.

JACKSONVILLE, FLORIDA.

[*Official Number*, 73.]

Latitude	30° 24′
Longitude	80° 40′
Elevation of barometer above sea-level	22.9 feet.

The location of the office remains unchanged since the date of last report. Reports from five other Gulf stations are received here and published in the regular matter. During the year three thousand and seventy-six bulletins have been issued and four hundred and forty press-reports furnished for publication. The station was inspected in February of the present year and found in fair condition. Sergt. D. A. Daboll was in charge until January 2, 1873, when he was relieved on account of ill health, and succeeded by Sergt. Richard McLaughlin, who still remains and has given satisfaction. All mail-reports have been forwarded promptly and in proper form. Private W. U. Simons still remains on duty as assistant, and has given satisfaction to the observer and to the central office. Considerable interest is manifested in the service here, and much regret is expressed at the inability of the office to furnish reports from a greater number of stations, especially during the winter, when many visitors from the North spend the season in Jacksonville and are naturally anxious to know the state of weather at their homes. Both newspapers published at the station print all reports furnished them in excellent form. Owing to a temporary derangement of the telegraphic facilities the midnight reports from July 1 to August 1 were not forwarded until the next morning, and during this time the 9 o'clock p. m. reports were sent instead.

Four cautionary signals have been displayed during the year, of which three are reported as justified at the station.

The observer makes the following remarks in reference to these displays:

March 23–25, 1873.—Two schooners loaded with lumber delayed going until the gale was over, the captains ascribing the saving of their vessels to the display of the signal.

March 25–26, 1873.—The steamer City Point waited until after the signal was lowered before she left.

Digitized by Google

KEOKUK, IOWA.

[*Official Number*, 47.]

Latitude	40° 23′
Longitude	91° 27′
Elevation of barometer above sea-level	584 feet.

No change has been made in the location of the office since last report. Reports from twenty-nine other stations are received here with as much regularity as the imperfect telegraphic facilities will permit, and during the spring and fall reports from all the special river-stations are also received. One thousand seven hundred and ninety-six regular bulletins have been issued during the year. One thousand and ten river-bulletins posted. The newspapers print selections from the river-reports, and also that part of the Probabilities which applies to the West, but decline to use the tabulated reports, and manifest less interest in the service than the press of any other station.

The station was inspected in June of this year, and the instruments found in good condition. Several irregularities were found in the manner of keeping the records, which were corrected before the inspector left the station.

Sergeant Daw was relieved from charge of the station November 22, for neglect of duty in failing to forward his mail reports promptly, and was succeeded by Sergt. James H. Marsh, who still remains, having given general satisfaction.

The assistant on duty at last report was called in for promotion April 14, and passed a satisfactory examination after going through the regular course of instruction at Fort Whipple.

Private Mark Foley is the present assistant, and has performed his duty satisfactorily.

Regular observations have been made daily of the stage of water in the river, and reported by telegraph.

The bench-mark used is at the northeast corner of Old Pilot's Indicator, 1,400 feet above the bridge. The height above low water is 14.183 feet, and above high water 8.95 feet. The measurement is not made from the bed of river.

Depth of water in channel at extreme low water 4½ feet, and at extreme high water 24 feet 9 inches to 25 feet 4 inches.

Considerable interest is manifested by leading citizens in the service, especially by those connected with the river trade.

KEY WEST, FLORIDA.

[*Official Number*, 25.]

Latitude	24° 32′
Longitude	81° 48′
Elevation of barometer above sea-level	17 feet.

No change has been made in the location of the office at this station since last report. Reports from the West India stations are received here and transferred by the observer to Lake City, besides being furnished to the press, with the local observations, weekly. The station was inspected in December, 1872, and the records and instruments found in excellent condition. Sergt. M. J. Shanefelter was in charge until February 18, 1873, when, under authority from the central office, he exchanged stations with Sergt. William Theodovius, then at Punta Rassa. Sergeant Theodovius was in turn relieved July 7, by

Digitized by Google

Sergt. B. C. Anderson, who still remains and gives satisfaction by the promptness and regularity with which his reports are rendered.

One assistant has been called in for promotion during the year, and after going through the regular course of instruction at Fort Whipple passed a satisfactory examination. Private E. K. Moore reported as assistant December 23, 1872, and exchanged stations February 18, 1873, with the assistant at Punta Rassa, Private M. M. Lewis, who still remains, and has merited the commendation received from the observer for his faithful discharge of duty. He had entire charge of the station for several weeks previous to Sergeant Anderson's arrival, and made all reports in proper form and time.

KNOXVILLE, TENNESSEE.

[*Official Number*, 42.]

Latitude	35° 56′
Longitude	83° 58′
Elevation of barometer above sea-level	993 feet.

The office at this station still remains in the University building, and affords sufficient facilities for its station-work, although its distance from the telegraph-office is a disadvantage. No rent is paid for the office, and every facility is extended by the faculty to promote the usefulness of the service. No reports are received here from other stations, but nine hundred and thirty-six reports of local observations have been furnished to the press and regularly published. Sergt. John K. Payne remains in charge of the station, and has furnished all reports promptly and satisfactorily. He has no assistant, but gets occasional aid from the students of the university.

The midnight report is usually delayed until the succeeding day on account of the closing of the telegraph-office. The station has not been inspected during the year.

LA CROSSE, WISCONSIN.

[*Official Number*, 87.]

Latitude	43° 48′
Longitude	91° 27′
Elevation of barometer above sea-level	686. 26 feet.

This station was established October 15, 1872, by Sergt. Richard Williams, who still remains in charge and has given satisfaction.

The office is in the business center of the town, at the corner of Second and Main streets, convenient to all important public places. The roof exposure for instruments cannot be excelled at the station. The post-office is two squares distant, the court-house and International Hotel and the Mississippi River are the same distance. The telegraph offices are one square distant.

The instrument-shelter is of the standard model, and projects from a window in the second story.

Reports from other stations are not received here, but the local observations are furnished regularly to the press, and published in good form.

The station was inspected in August of the present year, and the records found in poor condition. The errors were pointed out and corrected by the inspector, and the observer retained upon his recommendation, as he appeared to have erred through ignorance alone.

Digitized by Google

Regular river observations have been made each afternoon, and furnished with the usual telegraphic reports.

The zero of gauge is low-water mark of October 1, 1871, and is two feet two and a half inches above the bed of the river. The gauge is attached to one of the piles of the bridge leading to North La Crosse.

Telegraphic reports were suspended from January 10 to April 4, 1873, in accordance with instructions from the central office.

The inspector reports that considerable interest is felt in the service among the citizens of the station.

LAKE CITY, FLORIDA.

[*Official Number*, 24.]

Latitude	30° 13′
Longitude	82° 40′
Elevation of barometer above sea-level	216 feet.

The location of the office at this station remains unchanged since last report. The reports of three regular stations and all of those from the West India stations are transferred here to the observer at Savannah.

No bulletins are published, nor any special local use made of the reports, and as the necessity for a station at this point no longer exists its removal to some more useful location is recommended.

The station was inspected in February of the present year, and instruments and records found in fair condition. The office and instrument-shelter needed repairing, but as there was reason to believe that the station would be broken up at an early date, it was not considered advisable to expend any more money upon it than was absolutely necessary, and the repairs were not made.

Sergt. James O'Dowd was in charge of the station until relieved August 27, 1873, on account of ill-health. He was succeeded on that date by Sergt. A. D. Woolcott, who still remains. Both men have given satisfaction.

Two assistants have been called in for promotion during the year and both passed the required examination, and are now in charge of stations.

One assistant was ordered in for discharge, and was succeeded by Private John A. Cody, who still remains.

But little interest is felt in the service by the inhabitants.

LEAVENWORTH, KANSAS.

[*Official Number*, 52.]

Latitude	39° 19′
Longitude	94″ 58′
Elevation of barometer above sea-level	813.38 feet.

The office has not been moved since last report, and as it is commodious, centrally located, and convenient to the principal business places, no change is recommended.

Reports from other stations are not received here, and the only bulletins issued are those of the local observations, of which six hundred and ninety-three copies have been furnished the press during the year, and published in full by the several newspapers of the city. These papers also publish the monthly abstracts of the local weather, pre-

Digitized by Google

pared by the observer, and also the Monthly Weather Review, received from the central office.

Regular river observations are made daily, and reported in the usual manner. The zero of the gauge is fixed at low-water mark in the Missouri, which is about one foot above the bed of the river, although the river bottom changes at each flood.

The station was inspected in July of the present year, and found in good condition. Some irregularities existed in the manner of keeping the records, but they were corrected by the inspector. Sergt. George Boehmer, in charge at the date of last report, was transferred to the central office December 2, 1872, and succeeded by Sergt. George S. Rowley, who still remains, and whose mail reports have been forwarded with regularity. His general management of the station was favorably mentioned by the inspector.

Private E. W. McGann was ordered in for promotion November 1, 1872, and after going through the regular course of instruction at Fort Whipple passed a satisfactory examination, and is now in charge of a station. His successor, Julius F. Beyer, was fatally injured by falling from the office-window to the pavement, while on duty, and died February 8, 1873. He was a man of excellent habits and fine intelligence. The present assistant is private Thomas Jones, who has been on duty in that capacity since March 18, 1873.

The midnight reports from this station are not forwarded until the morning following, as the telegraph-office is closed at the regular time for sending them.

The inspector reports that much interest is felt in the service by the citizens, and a general desire is expressed for the receipt of reports from other stations on the western rivers and in the Territories. With the present telegraph facilities these reports cannot be furnished in a satisfactory manner.

LEXINGTON, KENTUCKY.

[*Official Number*, 90.]

Latitude	38° 06′
Longitude	84° 33′
Elevation of barometer above sea-level	1,083 feet.

The station was established October 1, 1872, by Sergt. W. S. Jewell, who still remains in charge and has given satisfaction. The office is in one of the university buildings, and is furnished free of cost to the Government. Reports are not sent by telegraph, but the seven regular observations are made daily, and forwarded by mail at the end of each week. No reports are received here. The officers of the university have made several urgent requests to be furnished with full reports from Cincinnati once each day, and as the station is one of instruction it is recommended that the request be complied with. The observer is commended by the officers of the university for his general good conduct, intelligence, and attention to duty.

LOUISVILLE, KENTUCKY.

[*Official Number*, 64.]

Latitude	38° 1[illegible]
Longitude	85° 52
Elevation of barometer above sea-level	496 feet.

No change has been made in the location of the office at this station

Digitized by Google

since last report. Reports from nineteen regular stations are received here, and also from all the special river stations, when in operation.

During the year three thousand three hundred and eleven bulletins of the regular reports and six hundred and ninety of the river reports have been issued, and seven hundred and fifty-nine reports furnished to the press and published in excellent form. Eight hundred and fifty manifold copies of the Synopsis and Probabilities have also been posted with the bulletins in the most prominent public places.

The leading daily papers publish, in addition to the tabulated reports, the complete local observations, the river reports, weekly chronicle and monthly abstracts and the latest Probabilities received, and manifest in every way a gratifying interest in the welfare of the service.

The station was inspected in March of the present year, and the office, instruments, and records found in good condition. The observer in charge, Sergt. R. E. McGrady, was favorably mentioned by the inspector for his attention to duty and courtesy in furnishing information to applicants. After the visit of the inspector, however, Sergeant McGrady began to neglect his work by failing to transmit the mail reports on time, and at length fell so far behind in this respect that he was ordered to Fort Whipple September 22, 1873, and succeeded by Sergt. Jesse W. Craig, who is now in charge. During the year two assistants have been ordered in for promotion, one of whom has passed the required examination and is now in charge of a station, and the other is going through the regular course of instruction at Fort Whipple. Private Ned Warren, the present assistant, has been on duty since July 29, 1873, and given satisfaction by the manner in which he has discharged his duties.

Regular river observations are made daily in the usual manner, the depth of water being taken from a gauge at the foot of Tenth street, which is used by all river-men and considered reliable.

The zero of this gauge is the sill of the lock of the Louisville and Portland Canal. The bench-mark is the door-sill of house, corner of Tenth and Water streets, and is 28.1 feet above zero. Extreme high water of February 21, 1832, is 41.8 feet above zero.

LYNCHBURGH, VIRGINIA.

[*Official Number*, 44.]

Latitude	37° 30′
Longitude	79° 02′
Elevation of barometer above sea-level	738 feet.

The office was moved September 1, 1873, to No. 135 Main street, in the building of the First National Bank, where all instruments have a much better exposure than previously.

Reports from other stations are not received, and therefore the only bulletins issued are those of the local observations, which are furnished regularly to the local newspapers. These papers also print the latest Probabilities received from Washington through the agency of the Southern Press Association.

The station has not been inspected since last report, and the present condition of the office is therefore unknown, except from the reports of the observer, who states that all instruments are in perfect order.

Sergt. S. B. Murray was relieved from charge of the station January 9, 1873, for neglect of duty in not forwarding his mail reports on

Digitized by Google

time. He was succeeded by Sergt. H. U. Jones, who still remains and has been especially prompt in rendering all reports.

There is no assistant at the station, nor is any considered necessary at present, as the work of the observer is limited to making the seven daily observations and recording them.

In reference to the interest manifested by the citizens in the service, the observer remarks as follows in his report for the six months ending June 30, 1873:

Lynchburgh being one of the greatest tobacco-markets in the United States, and the greatest manufacturing city, receives undoubtedly the most positive and definite amount of benefit from the system of weather reports of any city in the Union that is situated in the interior. The manufacturers, after a long and patient comparison of the Probabilities and the weather which actually occurs, have arrived at the conclusion that for practical purposes the Probabilities are "certainties," and make their arrangements about placing tobacco in the open air in accordance therewith, and they are unanimous in their declarations of appreciable good derived directly from the signal-service reports in enabling them to prevent a great loss of labor and material.

MARQUETTE, MICHIGAN.

[*Official Number*, 50.]

Latitude	46° 33′
Longitude	87° 36′
Elevation of barometer above sea-level	666.33 feet.

The office remains at the corner of Spring and Front streets, in the business center of the town, and within one square of the lake, the telegraph-office, and the most important public houses. The location is a good one for the exposure of the instruments. No reports are received here, the station being for observation and report and for the display of cautionary signals only.

The local observations are furnished regularly to the Mining Journal, the only paper published at the station. This paper also prints weekly abstracts of the local weather. The station was inspected in May of the present year, and records and instruments found in good condition.

Sergt. W. H. Clendenon remains in charge, and has rendered all reports promptly and satisfactorily. The inspector reports that he is spoken of in very warm terms of commendation by citizens with whom he has official relations. Arrangements were made for the display of cautionary signals as soon as the telegraphic communication could be relied upon to transmit them promptly; and the first signal was ordered September 26, 1873. Previous to that date several warnings had been sent to the observer whenever danger was anticipated.

There is no assistant at the station. Since the date of last report the telegraphic communication has been greatly improved, and the reports transmitted with greater regularity.

MEMPHIS, TENNESSEE.

[*Official Number*, 62.]

Latitude	35° 07′
Longitude	90° 07′
Elevation of barometer above sea-level	299 feet

No change has been made in the location of the office since last report.

Reports from nineteen regular stations are received here, and also those from the special river-stations when made. During the year, two thousand nine hundred and seventy-two tabulated and one thousand five hundred and seventy-seven river-bulletins have been issued, and

Digitized by Google

four hundred and sixty-five press reports furnished for publication. One thousand and fifty-six manifold copies of the Synopsis and Probabilities were made and posted with the bulletins previous to August 25, on which date the printed issue to post-offices was commenced. Fifty-nine offices are supplied with two copies each daily, the total number issued to date being three thousand seven hundred and seventy-six.

The station was inspected in March of the present year, and reported in excellent condition.

Sergt. S. W. Rhode remains in charge, and has rendered all reports promptly and in proper form. His semi-annual reports are especially well prepared.

Privates John D. Sumet and James T. Clements are on duty as assistants, and are both favorably mentioned by the observer for their good conduct and faithful attention to duty. One assistant (Private A. G. Tassin) has been ordered in for promotion during the year, but, receiving a commission as second lieutenant in the Army before completing his course of instruction at Fort Whipple, was not examined.

The following extracts from the semi-annual report of the observer for the period ending June 30, 1873, will give a fair idea of the interest manifested in the service:

As to the use made of the reports received at this station, I have to report that I am often called upon by the railroad and express companies to know the condition of the weather. These companies are often sued for damages to goods from being exposed to the rain and sudden changes in the temperature. It is a very important matter to them to know the condition of the weather while these goods were in their charge. I have always been able to furnish the information these parties desired, the Weekly Weather Chronicle being very useful in this connection. One brickmaker stated to me that he had often saved as high as two and three hundred dollars a day by giving close attention to, and heeding the warnings given in, the Probabilities.

The increase of the river-reports was highly commended by the river-men, and this movement by the Department in their behalf has been duly appreciated by every one connected with the river. The planters along the river also give close attention to the river-reports, as they can now have several days' warning of an overflow.

The cotton-factors of this city also manifest considerable interest, and this office is visited almost daily by cotton-men, desiring information as to the amount of rain-fall, temperature, &c., in the cotton States. The river-men have been very profuse in their encomiums, as the river-reports of the service have been of great value to their interests. The additional river-station shave been very valuable to them, and there is no doubt but that, by the present system, an immense amount of property can be saved to the planters in the Lower Mississippi Valley. The service has gained a fast hold on the people of this city, and there are certain portions of the public that have saved so much by heeding its warnings that they would not know what to do without it.

Regular river observations are made at this station and reported in the usual manner. The gauge used is one constructed by the United States Engineer Corps, as stated in the last annual report.

MILWAUKEE, WISCONSIN.

[*Official Number*, 38.]

Latitude	43° 03′
Longitude	87° 54′
Elevation of barometer above sea-level	661.4 feet.

The office was removed in April to an adjoining room in the same building, but, while centrally located, labors under the disadvantage of being imperfectly heated during the winter months. Efforts will be made to remedy this defect before the cold weather renders the office uncomfortable.

Reports from fifty-seven stations are received here, of which seven are

Digitized by Google

transferred to Chicago in addition to their publication at the station in the usual manner.

During the year one thousand eight hundred and fifty-three maps and three thousand five hundred and sixty bulletins have been issued, and four hundred and fifty-five press-reports furnished for publication.

Eight hundred and forty-nine manifold copies of the Synopsis and Probabilities have also been made and posted with the bulletins in the most prominent public places.

The station was inspected in April of the present year, and the records and instruments found in good condition.

Sergt. D. H. Sackett was relieved March 20, 1873, on account of a personal difficulty with the telegraph-operators, in which he does not appear to have been the most at fault. He was succeeded by Sergt. H. M. Ludwig, who still remains in charge and has given full satisfaction by the able manner in which he has discharged his duties.

One assistant has been transferred to the central office during the year. His successor, Private A. Dunhauser, was ordered there April 1, 1873, and still remains. His conduct has been favorably mentioned by the observer.

Thirty-six cautionary signals have been displayed during the year, of which twenty-four are reported as justified at the station.

In reference to these displays the observer remarks as follows:

October 15–16, 1872.—High northerly winds prevailed on the lake, and vessels put back to port and remained until the signal was lowered.

October 29–31, 1872.—Sailing-vessels remained in port; steamers went out, but returned and remained in port until the gale abated.

November 7, 1872.—Heavy gale on the lake.

November 13–14, 1872.—Vessels that were out put back to port and waited until the signal was lowered.

November 25, 1872.—The vessels remained in port.

November 28–30, 1872.—Vessels remained in port. The majority are laid up for the winter.

November 30–*December* 2, 1872.—Wind, accompanied by snow. One vessel disobeyed the signal and went out, but met with a heavy sea which compelled her to put back to port.

December 2–3, 1872.—No vessels going out; all laid up for the winter.

April 7–10, 1873.—No sailing-vessels left port. No casualties reported.

September 17–18, 1873.—Very few departures during the display of the signal, and damage to shipping reported. A rough sea experienced by Milwaukee-bound vessels.

September 24–25, 1873.—Vessels remained in port until the wind veered to the southwest, of which several took advantage and cleared. The bark Unadilla lost her mizzen-topmast by rough weather on Lake Michigan on Wednesday, and the schooner W. J. Whaling foundered at Grand Haven and is a total loss.

September 26–27, 1873.—Vessels remained in port during the continuance of southeast wind and cleared with the southwest.

The leading newspapers print the tabulated reports, the weekly and monthly abstracts, and the latest Probabilities received up to the time of going to press. The inspector reports that the citizens display a marked interest in the service. In reference to this subject the observer remarks:

Farmers and visitors from the surrounding country, whom I frequently meet, all speak with the highest praise of the benefits derived from the reports, and especially the Probabilities, which have been unusually correct for this region. Numerous vessel-owners and others interested in shipping study the Probabilities for anticipated changes in the direction of the wind, and accordingly regulate their vessels for early departure or otherwise, as the case may be. Cautionary signals, when up, are also closely watched, and cases have come under my personal notice where vessels delayed their departure during the display of the signals.

MOBILE, ALABAMA.

[*Official Number*, 27.]

Latitude	30° 42′
Longitude	88° 11′
Elevation of barometer above sea-level	41 feet

No change has been made in the location of the office at this station since the date of last report. No reports from other stations are received here, but during the year one thousand seven hundred and twenty-three bulletins and one thousand four hundred and sixty-six press-reports of local observations have been issued by the observer, in addition to five hundred and forty-seven manifold copies of the Synopsis and Probabilities made and posted with the bulletins. The station was inspected in February of the present year, and instruments and records found in good condition.

Sergt. D. O'Donoghue remains in charge, and has given entire satisfaction. All reports have been rendered promptly and in excellent form. Two assistants have been called in for promotion during the year, one of whom has passed the required examination, and the other is still under instruction. Private C. A. Smith is the present assistant, and is commended by the observer for his attention to duty.

Thirteen cautionary signals were ordered during the year, of which five are reported as justified at the station. Several of these signals were delayed in transmission until their time of usefulness had passed.

In reference to the display of April 1, 1873, the observer remarks: "A few vessels not taking warning were driven from their moorings."

The inspector reports that the citizens are very much interested in the service, and are anxious to have reports from other stations.

The secretary of the cotton-exchange made a most earnest request through him, that the cotton-exchange be furnished with reports from the cotton States during the cotton-growing season at least. He states that these reports are of the utmost value to cotton-merchants, as they show the actual state of the weather at the points where stations are located, and upon this data the business men rely in a great measure in making their calculations as to the probable value of the crop.

MONTGOMERY, ALABAMA.

[*Official Number*, 26.]

Latitude	32° 22′
Longitude	86° 23′
Elevation of barometer above sea-level	249.9 feet.

The office at this station remains at 49 Market street, in the business portion of the city. It was inspected in February of the present year, and found in a fair condition. Upon the recommendation of the inspector, the instrument-shelter has been remodeled and painted, to procure a better exposure for the instruments. It is also intended to remove the office to a more suitable building, but as yet none has been found.

Sergt. George A. Clum remains in charge, and has forwarded his reports promptly and in good shape; and as no reports are received here from other stations, he has been without an assistant until September 11, 1873, when the station was made one of the southern centers for the distribution of the daily Synopsis and Probabilities to post-offices, and Private H. E. Armstrong, a printer, ordered here as assistant.

Digitized by Google

Commencing September 20, 1873, the midnight Synopsis and Probabilities are received by telegraph and are printed, and two copies are mailed daily to forty-five post-offices.

The press has been furnished with and published the daily local observations and the monthly summaries.

MOUNT WASHINGTON, NEW HAMPSHIRE.

[*Official Number*, 46.]

Latitude	40° 16′ 25″
Longitude	71° 16′ 26″
Elevation of barometer above sea-level	6285.4 feet.

The office at this station was located during last winter in the depot of the Mount Washington Railway Company, on the summit, and during the summer was moved from one building to another, belonging to the same company, until it was finally settled permanently, in September, in a comfortable and roomy house built for this especial purpose, at the expense of the central office, by Mr. Walter Aiken, to whom the office is indebted for many courtesies shown the observers, and for valuable assistance rendered on many occasions. The station was inspected in December, 1872, and an officer is now on his way to make another inspection. The station was found in excellent condition when last visited, all instruments and records being in good working order, and the men comfortably situated. Sergt. A. R. Thornett remains in charge, and has given entire satisfaction by the regularity, neatness, and promptness with which all of his reports have been forwarded. He has sent most of his own telegraph reports during the year, having learned to operate with sufficient skill. Sergt. William Line also remains on the station, and is warmly commended by the observer in charge for his ability and zealous attention to duty. Private William Ramsay was ordered in for promotion July 1, 1873, and, after the usual instruction, passed his examination, and is now in charge of a station. An extra assistant was sent to the station during the time the special observations were made, of which a separate report has already been submitted to you. He was recalled August 4, 1873, and succeeded by Private F. De Rosher, who performs his duties satisfactorily. A great amount of extra labor was thrown upon Sergeant Thornett in connection with the establishment of the special stations on the side of the mountain, and he is entitled to praise for the faithful and intelligent manner in which he performed it.

The following estimate of provisions required for the supply of three persons for eight months is given as the result of the observer's experience, and as a guide for future occupants of the station:

3 barrels flour.
1 bushel corn-meal.
5 dozen 3-pound cans tomatoes.
8 dozen 1-pound cans milk.
45 pounds Java coffee.
1 pound mustard.
25 pounds baking-powder.
1 keg vinegar.
3 kits mackerel.
250 pounds fresh beef.
2 barrels onions.
60 pounds butter.
6 pounds tea.
1 box table-salt.
50 pounds dried apples.
2 bushels beans.
10 bars extra soap.
1½ pounds assorted spices.
1 barrel ship-bread.
1 barrel plate-beef.
5 dozen 2-pound cans corn.
2 dozen 3-pound cans beef.
1 barrel white sugar.
1 pound pepper.
1 keg standard sirup.
2 boxes raisins.
60 pounds corn-starch.
25 bushels potatoes.
3 gallons English pickles.
50 pounds ham.
25 pounds rice.
3 boxes herrings.
50 pounds dried peaches.
3 bars castile soap.
150 pounds fresh pork.

Digitized by Google

A few cans jelly, chickens, &c., for use in case of sickness; some tobacco, and a few herbs, such as sage, &c. Some unknown ladies have kindly given the observer about one hundred volumes of the latest novels and other interesting publications, to amuse the men on station during their long and dreary winter isolation. It is to be regretted that the names of the generous donors are unknown, in order that their thoughtful kindness might be suitably acknowledged.

As in previous years the thanks of the office are due to Mr. Walter Aiken and Capt. J. W. Dodge, of the Mount Washington Railroad Company, and to Mr. Benjamin Kilburn, of Littleton, for their continued assistance in many ways.

The line has been kept in good repair from base to summit during the year, and the interruptions that have occurred in communication have been caused at points beyond the control of the observer.

MOUNT WASHINGTON, NEW HAMPSHIRE.

[*Base.*]

Elevation of barometer above sea-level..... 2,898.3 feet.

This station was opened May 1, and observations made regularly until June 30, 1873, in connection with the summit and other stations. A detailed report of their observations has been already submitted. Sergt. Robert Seyboth was in charge of the station, and had two assistants. All the men were faithful in the discharge of their duties, and the full records were brought to the central office in excellent shape and condition. One of the assistants (Private William Seely) was fatally injured, June 28, by falling from the railway trestle-work, and died at Littleton, to which place he had been removed for medical treatment.

He was an honest and faithful man, and his loss was greatly deplored by his comrades. A full account of the accident will be found in the journal of Sergeant Seyboth for June 28, 1873, given in the special report already referred to.

MOUNT WASHINGTON, NEW HAMPSHIRE.

[*Station No.* 2.]

Elevation of barometer above sea-level..... 5,553.3 feet.

This station was opened by Sergt Edward Lloyd, assisted by Privates A. L. Bowie and G. H. Crane, June 1, and discontinued June 30, 1873.

It was located in a railway-car, furnished through the courtesy of the railway company, and which answered the purpose admirably, except during the prevalence of high winds, when it was shaken so violently that the mercury in the barometer oscillated far beyond its normal range, and caused the discrepancies that will be occasionally noticed in the readings of this station. All the records were brought in to the central office in good shape, and will be found in the detailed report of these special observations.

MOUNT WASHINGTON, NEW HAMPSHIRE.

[*Station No.* 3.]

Elevation of barometer above sea-level ..... 4,058.7 feet.

This station was located in the Waumbeck House, and opened June 1 by Sergt. D. H. Sackett and Privates C. R. Daw and J. A. Barwick.

Digitized by Google

It was broken up June 30, 1873, in common with the other special stations. The records were brought into the central office in good shape, and are given in the detailed report of these special observations.

MOUNT MITCHELL, NORTH CAROLINA.

[*Summit.*]

Latitude	35° 48
Longitude	82° 10′
Elevation of barometer above sea-level	6,691 feet.

This station was established by Sergt. W. E. Smith, and observations began May 11, 1873, and were continued until September 6, as set forth in the special report already submitted to you.

The men labored under many difficulties, and two of them were unfitted for duty a part of the time on account of sickness brought on by exposure.

One of these men, Sergt. W. A. Chapman, was not able to travel when the station was broken up, and has not yet reported at his proper post.

The records of the station were kept in a neat manner, and no observations were omitted.

MOUNT MITCHELL, NORTH CAROLINA.

[*Base.*]

Elevation of barometer above sea-level	2,560 feet.

This station was established by Sergt. D. H. Sackett to be worked in connection with the summit station, with which regular communication was maintained by signal. The first observations were made August 6, and continued until September 6, when the station was broken up and the party returned to Washington.

A detailed account of the work done will be found in the special report already submitted to you.

All observations were made properly and the records kept neatly and correctly.

MORGANTOWN, WEST VIRGINIA.

[*Official Number*, 92.]

Latitude	39° 40′
Longitude	79° 55′
Elevation of barometer above sea-level	991.23 feet.

The office at this station was located on the second floor of the West Virginia University building until August 1, 1873, when a more suitable and convenient office on the third floor was kindly provided by the president of the university. The roof instruments are well exposed; the instrument-shelter is of the authorized pattern, and projects from a window facing 26° east of north.

The office is furnished by the university free of cost.

Sergt. Charles R. Daw opened the station January 28, 1873, but neglecting his work he was relieved for neglect of duty and reduced to the ranks. Sergt. Thomas L. Watson succeeded him in charge of the station April 22, 1873.

This man also failed to attend to his work properly, and upon the rec

Digitized by Google

ommendation of the inspecting officer, who visited the station in August of the present year and found it in a neglected condition, was at once relieved and reduced to the ranks. Sergt. J. D. M. Fee took charge August 25, 1873, and still remains and gives satisfaction.

This station being one of observation only, no reports are sent by telegraph, except occasional mid-day barometrical reports, and since May 3, 1873, also one report of the stage of the water at 3 p. m. daily.

The river-gauge used at this station rests upon the bed of the river, and the reports, consequently, indicate the exact depth of water in the channel.

No reports are received here from other points, and consequently no maps or bulletins are issued. The monthly summaries are furnished to and published by the Morgantown Post, a weekly paper.

The station is highly valued by all the officers of the university, and there are reasons to believe that the present observer will extend his sphere of usefulness.

The office is indebted to Dr. Alexander Martin, the president of the university, for valuable aid rendered in connection with the station.

NASHVILLE, TENNESSEE.

[*Official Number*, 63.]

Latitude	36° 11′
Longitude	86° 53′
Elevation of barometer above sea-level	504 feet.

No change has been made in the location of the office at this station since the date of last report, nor is any considered necessary, as it is in the business center of the city, and within easy reach of the telegraph-offices. Reports from nineteen regular stations are received here, besides all those made from the special river-stations. During the year, three thousand three hundred and seventy-two tabulated bulletins and one thousand and seventy-three river-bulletins have been issued, and two hundred and eight reports furnished on the regular form to the press for publication. The full local observations have also been constantly given to the press, in addition to a daily abstract of the weather at the several stations from which reports are received.

This abstract is prepared by the observer, and has been received with marked favor. This station having been selected as one of the centers of distribution for the Synopsis and Probabilities to post-offices, the regular issue to ninety-six offices commenced September 4, 1873, and has been continued regularly since that date. The station was inspected in March of the present year, and found in excellent condition. Sergt. W. S. Kauffman was in charge at the time, and the inspector commended him in warm terms for intelligence and zeal. He was transferred May 1, 1873, to Chicago, and Sergt. A. C. Ford from that station took his place. The duties have been well and faithfully performed by Sergeant Ford.

Two assistants have been called in for promotion during the year, both of whom passed the required examination after going through the usual course of instruction at Fort Whipple.

Privates Stansell and O'Brien are the present assistants, the latter being a printer, sent to assist in getting out the post-office bulletins. Both men are favorably reported upon by the observer for their attention to duty. The citizens manifest a gratifying interest in the service, especially that part of it connected with the river-reports. The observer

Digitized by Google

has been called upon several times to furnish the records of his office as evidence in lawsuits of importance.

Regular river observations are made at this station, and reported in the usual manner. The river-gauge remains on the southern face of the northern draw-pier of the Louisville and Nashville Railroad bridge, and the zero of the gauge corresponds to extreme low water in the Cumberland River. Referring to these reports, the observer remarks as follows in his journal for June, 1873:

In conversation with the president of the board of trade and other business men of the city, the observer learned that the river-reports of the signal-service were doing a great deal of good with the shippers of the place. A conversation had with the secretary of the board, and a large tobacco-dealer, is submitted entire.

Question by observer. Do you think that the weather-reports of the signal-service are of any local or immediate benefit to this community?

Answer. O, yes, a very great benefit; for instance, I am in the tobacco business extensively, and to me the river-reports are particularly valuable, and so to others in like pursuits. If we want to ship freight by water, we can tell before it leaves whether it can go through or not, without reshipping, knowing the draught of the boat on which we load and the stage of water in the rivers we intend to run her in; nothing is easier. This, too, makes a difference in insurance rates in favor of the shipper, the companies charging higher rates if the cargo is to be reshipped, for they say, "we don't know what kind of a boat you will transfer to," and the risk is greater.

Observer. Have the Probabilities ever attracted your attention?

Answer. I watch them like a hawk. I have also a farm about three miles from the city, and have utilized these predictions in carrying on my farm. I cut hay, plant corn, harvest, &c., when the indications are favorable by the reports.

NEW LONDON, CONNECTICUT.

[*Official Number*, 14.]

Latitude	41° 22
Longitude	72° 9
Elevation of barometer above sea-level	24.6 feet.

No change has as yet been made in the location of the office, but a removal to a more suitable building is in contemplation.

Sergt. C. E. Brinsmade, who was in charge at the date of last report, was relieved and reduced to the ranks on December 2, 1872, for absenting himself from the station without leave. He was succeeded by Sergt. Timothy O'Neill, who still remains in charge and has rendered his reports in good shape and given satisfaction.

Private Mark Foley, who was on duty at the date of last report, was ordered in for promotion January 21, 1873, and was succeeded by Private C. J. Costello, who remains, and is reported attentive to duty at present, although inclined to show himself indifferent when first ordered here.

Reports are received here from twenty-four other stations, and during the year two thousand nine hundred and thirty-four bulletins and one thousand and ninety-two copies of the Synopsis and Probabilities have been posted, and one hundred and fifty-one reports furnished the press.

Thirty-nine cautionary signals have been displayed during the year, twenty-seven of which are reported as justified at the station.

The following are some extracts from the observer's remarks upon incidents connected therewith:

January 5–7, 1873.—No damage to vessels, all remaining in port except one, which sailed about an hour before the signal was hoisted, and returned on the 7th dismasted and rigging all gone.

February 7–8, 1873.—No injury to vessels, all remaining in port.

March 10–11, 1873.—No injury to vessels, all having taken shelter in port when the cautionary signal was hoisted.

The interest manifested in the service at this station remains unbaated.

Digitized by Google

NEW ORLEANS, LOUISIANA.

[*Official Number*, 28.]

Latitude	29° 58′
Longitude	90° 07′
Elevation of barometer above sea-level	55.81 feet.

The only change made in the office at this station since last report has been its removal to another room on the same floor, which did not affect the elevation of the instruments. Reports from twenty-one regular stations are received here, in addition to those from all the special river-stations. The reports from Shreveport, Indianola, and Galveston are transferred to Cincinnati as received.

Five thousand five hundred and seventy-three regular, and three thousand four hundred and fifty-one river-bulletins have been issued during the year. Thirty post-offices have been regularly supplied with the printed midnight Synopsis and Probabilities since September 15, 1873.

The leading papers print the river-reports, the monthly abstracts of local weather and the latest Probabilities received through the agency of the Associated Press, with occasional selections from the tabulated reports. The station was inspected in February of the present year and the office found in a very unclean and disorderly condition. The instruments and records were in good order, however, and all reports had been properly made, and the unfurnished state of the office-room appeared to be the principal cause of the disorder noted. The observer was not recalled. Since the removal of the office no complaint has been made.

Sergt. Frank Mansfield was in charge until March 7, 1873, when he was transferred to Indianola, and succeeded by Sergt. Nelson Gorom, who still remains, and has given satisfaction by the promptness and regularity with which all reports have been rendered.

Private D. C. Ralston, the assistant at last report, was ordered in for promotion March 14, 1873, and passed a satisfactory examination after going through the regular course of instruction. Three assistants are now on duty at the station, one of whom is a printer, charged with the issue of post-office bulletins. Two of them are favorably reported upon by the observer, but the third man has only been on this station a few days, and his capacity is therefore unknown.

Regular river-observations are made here and reported in the usual manner. The gauge used is one put up by the city engineer as stated in last year's report.

The bench-mark is high-water mark of 1871, (and is marked on the city tide-gauge,) at which the zero of gauge (from which all river-measurements are made) is placed. From this point to the bottom of the river is approximately 178 feet. The zero is 15 feet above sea-level and 10.5 feet below the city datum-line.

Merchants and others interested in shipping take a lively interest in the reports, and express an earnest desire to have more of them than are received at present, especially from the cotton-growing States.

Twelve cautionary signals have been displayed here during the year, of which five are reported as justified at the station.

NEW YORK CITY.

[*Official Number*, 15.]

Latitude	40° 42′ 43″
Longitude	74° 00′ 03″
Elevation of barometer above sea-level	165.60 feet.

The only change made in the office at this station during the year has been its removal to two rooms on a lower floor of the Equitable building. These rooms are the same size as those previously occupied, and are more easily reached. Reports from all stations are received here and are transferred to the several circuits over which they are distributed. The transfer requires prompt action and correct judgment on the part of the observer, especially when—as frequently happens—some of the telegraph lines are broken. This duty has been performed by him in a generally satisfactory manner. During the year forty-one thousand six hundred and thirty-six maps, containing the full midnight reports, have been printed and ready for distribution by daybreak daily, and five thousand nine hundred and seventy-seven bulletins have been issued in the regular manner. The issue of printed copies of the Synopsis and Probabilities to six hundred and seven offices was commenced February 25, 1873, and since that date two hundred and thirty-eight thousand four hundred and twenty-eight copies have been sent. These bulletins must be in the post-office by 5 o'clock a. m., daily, and the promptness and regularity with which they have been delivered shows the duty to have been well performed by all engaged upon it. The station was inspected in January of the present year and found in good condition. Sergt. C. R. Estabrook remains in charge, and has given entire satisfaction by his management of the station. Sergt. M. F. Tighe also remains as the senior assistant, and is highly commended by the observer for his close attention to duty. There are four other assistants on duty, of whom two are printers, and all are worked to their full capacity in getting off the large daily issue of publications. An additional printer is furnished by the Equitable Insurance Company to assist in getting out the maps, and that company also furnishes a messenger to distribute a portion of them. All the present assistants are favorably mentioned by the observer. One man was relieved during the year for misconduct at this station and one for discharge.

Thirty-nine cautionary signals have been displayed here during the year, of which twenty are reported as fully, and one partly, justified at the station. Much complaint is made by sailors of the want of brilliancy of the signal-light, which is not distinguishable from the bay, and is therefore practically useless. Arrangements are making to supply the station with a conspicuous light that will be easily visible at a distance of three miles or more.

In reference to the display of signals the observer remarks as follows:

January 5–6, 1873.—Owing to the signals having become loaded with ice, thus endangering the safety of the people in the streets below, they were loosened at 3 p. m., and again raised at sunset.

January 23–24, 1873.—Three coasting vessels known to have remained in the harbor on account of the warning.

February 7–8, 1873.—A large number of lighters were observed to seek safe positions in the harbor in advance of the gale.

NORFOLK, VIRGINIA.

[*Official Number*, 30.]

Latitude	36° 51
Longitude	76° 19.
Elevation of barometer above sea-level	55.52 feet

Digitized by Google

The location of the office remains unchanged. Sergt. James E. Magruder, who was in charge at the date of last report, was relieved February 18, 1873, for misconduct, and subsequently discharged the service. His successor, Sergt. E. W. McGann, remains in charge, and has given entire satisfaction. The station was inspected in February of the present year, and upon the recommendation of the inspecting officer the above-mentioned change in the observers was made.

Private E. B. Robbins, who was on duty here as assistant at the date of last report, was called in for promotion and succeeded by Private E. T. Carvalho, who still remains, and has also given satisfaction.

No reports have been received here during the present year, and no maps and bulletins are issued. The leading dailies, however, publish the monthly summaries and the Probabilities. Thirty cautionary signals have been displayed, and thirteen are reported fully justified and six partly so.

The observer remarks as follows on some of these signals:

October 23–26, 1872.—No injury known to have resulted to commercial or other interests. The rain-fall during the storm amounted to 7.47 inches.

March 3–5, 1873.—No vessels left port during the display of the signal. Many were anxious to leave, but did not do so until two hours after the signal was lowered.

March 11, 1873.—No vessels left port during the display of the signal.

March 15–17, 1873.—No injury known to have been done.

March 18–19, 1873.—No injury known to have been done to shipping.

March 19–22, 1873.—A heavy gale which lasted one hour, during which considerable damage was done to several vessels in port. One life was lost by a schooner being thrown on her beam-ends. A number of vessels remained in port until the signal was lowered.

April 16–17, 1873.—No vessels left port. One steamer, the N. P. Banks, attempted to leave but was compelled to put back.

April 22–24, 1873.—A heavy sea outside. Ten vessels remained in the roads until the signal was lowered.

September 19–20, 1873.—No boats left during the display of the signal. The steamer N. P. Banks, attempting to leave port, was compelled to put back on account of high sea.

NEW HAVEN, CONNECTICUT.

[*Official Number*, 96.]

Latitude	41° 17′
Longitude	72° 57′
Elevation of barometer above sea-level	107.1 feet.

The office is located in the upper story of the new insurance building, 368 Chapel street, a six-story structure, and affords an excellent exposure for all the instruments. It stands in the business center of the city, and is within a short distance of the post and telegraph offices. The instrument-shelter is of the authorized form, and projects from a window facing north.

The roof-instruments are located on the tower-deck, at an elevation of one hundred and twenty-seven feet above the curb. In the center of the deck stands the flag-staff for the display of cautionary signals, and from its height (one hundred and fifty-seven feet above the ground) can be easily seen from all parts of the harbor.

The rent paid for this office is $18 per month, and the thanks of the office are due to the members of the New Haven Chamber of Commerce for their valuable aid rendered this office in procuring so favorable a location.

Sergt. William Black opened the station on December 10, 1872. It being one of observation and for the display of cautionary signals only, no reports are sent to the central office by telegraph, except oc-

Digitized by Google

casional mid-day reports, in accordance with instructions on this subject. The regular number of daily observations are, however, made here, and transmitted weekly by mail. They have all been rendered promptly and in good shape.

The station was inspected in January of the present year, and reported in good condition.

No reports being received here, there are no bulletins or maps issued, and the local observations and monthly summaries only are furnished to and published by the press.

The first cautionary signal was displayed on March 8, 1873, and seventeen have been ordered since, eleven of which have been reported as justified at the station, and two partly so.

The following are some extracts from the observer's remarks upon these signals:

March 24–27, 1873.—The signal was justified, and gave general satisfaction by the prediction, so far in advance, of the two consecutive days' rain, sleet, &c., and the subsequent northwesterly gale. Several instances of benefit reported.

April 16–18, 1873.—One schooner heeded the signal, and avoided rough weather.

Much interest is manifested in the service by the shipping interests of the place and vicinity, and frequent applications have been received from these quarters for telegraphic-reports from other points.

The observer also makes the following remarks in his semi-annual report for July 1, 1873:

The press-reports furnished by the central office are published in excellent form, and held in high esteem. The telegraph-operators are required to hold open at night, after the hours of regular business, in order to get the latest Probabilities for publication in the morning newspapers. One editor reports that the country circulation of his paper has been greatly increased during the past spring by the accuracy of the published weather information.

NORTH POLAR EXPEDITION.

Sergt. Frederick Meyer, the observer sent with this expedition, returned to Washington early in June of the present year without records or instruments, having lost everything at the time of his separation from the vessel, as described in his special report already submitted. He was fortunate, however, in retaining note-books containing important topographical data, which have enabled him to chart the Arctic regions to a point farther north than any before reached by explorers.

OMAHA, NEBRASKA.

[*Official Number*, 67.]

Latitude	41° 16′
Longitude	96° 00′
Elevation of barometer above sea-level	1,045.69 feet.

The office was removed November 29, 1872, to the corner of Thirteenth and Farnam streets, where it still remains. It is centrally located and convenient to all the principal public places, and the roof exposure for instruments is as good as can be obtained in the city. The instrument-shelter is of the standard pattern and projects from a window facing the north. Reports from nine other stations are received here irregularly and furnished to the press. During the year five thousand one hundred and eighty-eight bulletins have been issued. The monthly abstracts are published regularly by the local papers, and also by several papers in the interior. The station was inspected in the latter part of July of this

Digitized by Google

year and found in such a disorganized condition that the observer was immediately relieved and, upon the recommendation of the inspector, reduced to the ranks and his place filled August 13, 1873, by Sergt. Thomas Cleary, who has rendered all reports promptly and in proper form. One assistant has been ordered in for promotion during the year and passed the usual examination in a satisfactory manner. Private John McCann is the present assistant, and has performed his duties faithfully while on the station.

Regular river observations are made daily and reported in the usual manner. The gauge used is attached to a pier of the Union Pacific Railroad bridge and its zero is the low-water mark of 1867. The high-water mark of the same year is 19 feet above zero of gauge.

OSWEGO, NEW YORK.

[*Official Number*, 31.]

Latitude	42° 28′
Longitude	76° 35′
Elevation of barometer above sea-level	299 feet.

No change has been made in the location of the office at this station since its establishment, nor is any considered necessary. Reports from fifty-five stations are received here and published in the usual manner.

During the year, two thousand seven hundred and three maps and three thousand two hundred and twelve bulletins have been issued, and five hundred and eighty press-reports furnished for publication, in addition to the full local observations.

The station was inspected in February of the present year, and found in excellent condition. Sergt. B. F. Hough remains in charge, and has forwarded all reports promptly and satisfactorily. The inspector reports that he is "an extremely zealous, energetic, courteous, and effective man."

The self-registering wind-vane, constructed by the observer and referred to in the last annual report, continues to work satisfactorily.

Two assistants have been called in, successively, from this station during the year for promotion, and after receiving the usual instruction passed their examination. Private E. Bird is the present assistant, and gives satisfaction.

Twenty-three cautionary signals have been displayed, of which eleven are reported as justified at the station. In reference to these signals, the observer remarks as follows:

November 7–8, 1872.—A number of vessels were kept in the harbor by the display of the signal, and were benefited thereby.

November 13–15, 1873.—Many vessels remained in port that would otherwise have been caught out, had it not been for the display of the cautionary signal—this I learn from officers of vessels.

November 27–28, 1872.—No damage reported.

November 29–*December* 1, 1872.—No injury is known to have resulted to commercial interests.

The two daily newspapers at the station publish selections from the tabulated reports, all the local observations, the monthly abstracts of the local weather and the latest Probabilities received.

A permanent interest in the service is manifested by the leading citizens. In reference to this subject, the observer remarks as follows:

The citizens manifested the usual amount of interest in the weather reports. Those most interested are the contractors, builders, shipping and commercial men, though the mariners, as a class, have derived the greatest benefits. I have the names of some who have told me that, by means of the weather-reports and information obtained

Digitized by Google

from this office, they have made one or two trips more than other vessels sailing from the same port. At the close of navigation last fall, when the insurance rates were high, captains and owners of vessels visited the office, watching their chance to sail, without insuring cargo or vessel. One man in particular, the owner of a propeller, came regularly for two or three days, and made his trip to Hamilton, Ontario, without insuring, which was a saving to him of $350.

PEMBINA, DAKOTA.

[*Official Number*, 86.]

Latitude	49° 00′
Longitude	97° 05′
Elevation of barometer above sea-level	790 feet.

The office is located in a one-story building, about two hundred yards from Fort Pembina. The instrument-shelter projects from a north window and is of the authorized pattern. There being a scarcity of houses in this country, the location is the best obtainable. Sergt. Alfred Brimer opened this station, but was subsequently discharged the service, and was succeeded by Sergt. George McDonald, who commenced taking observations November 1, 1872. This man proved to be of intemperate habits and neglected his work, and a request was subsequently sent to the commanding officer at Fort Pembina to place him under arrest and prefer charges against him for drunkenness and neglect of duty. This was done and he was tried before a general court-martial convened at Fort Pembina, and by the sentence of the court dishonorably discharged the service of the United States May 14, 1873. An examination of the records shows that he had failed to take seven observations in December, 1872, and forty-four in January, 1873.

Sergt. Sidney Powell was ordered to this station January 30, 1873, and Sergeant McDonald being in confinement, and the new observer taken ill shortly after his arrival, there were one hundred and fifty-three observations missed during the following month before he recovered.

The station was inspected in May of the present year and found in a fair condition. No reports are received here, and consequently no maps or bulletins are issued.

Much irregularity has been experienced in the transmission of reports by telegraph on account of the unprotected and exposed condition of the line. The office is indebted to Lieut. John Bannister, Twentieth Infantry, who has acted as telegraph-operator, while stationed at Fort Pembina, for valuable assistance rendered the observer. Upon the recommendation of the inspector, the office was furnished with a complete set of telegraph-instruments to enable the observer to send his reports himself in case of emergency. There is no assistant at this station, and none is considered necessary.

PHILADELPHIA, PENNSYLVANIA.

[*Official Number*, 17.]

Latitude	39° 57′
Longitude	75° 10
Elevation of barometer above sea-level	71.12 feet.

No change has been made in the location of the office since the date of last report, but through the courtesy of the officers of the chamber of commerce an additional room has been furnished free of expense to the Government, which adds greatly to the comfort of the observers and to the facilities for performing their work.

A serious objection to the present office consists in the want of proper

Digitized by Google

means of heating the rooms during that portion of the day when it is not occupied for business purposes, as there are no facilities for putting up a stove in any one of the office-rooms. Unless this difficulty is overcome before the approach of cold weather, it will be necessary to remove to some more favorable locality.

Reports from all stations are received and published here in the usual manner. The maps issued are printed from the midnight reports and are ready for distribution by daylight.

The members of the meteorological committee of the chamber of commerce assist in distributing the maps, and a wider circulation is thereby given them than could be attained by the force of the office alone.

During the year twenty-four thousand two hundred and sixty-seven maps and five thousand six hundred and seventy-nine regular bulletins have been issued.

Two hundred and eighty-one press-reports and one hundred and eight river-bulletins have been furnished for publication, and one thousand and twenty-four manifold copies of the Synopsis and Probabilities posted with the bulletins.

The station was inspected in January of the present year and found in good condition so far as the instruments and records were concerned.

Sergt. W. T. Boyd remains in charge, and has performed all his duties in an unusually able and intelligent manner, and bears an excellent reputation among the business men with whom he has official relations.

Eight assistants have been relieved in succession from this station during the year, three of whom were ordered in for promotion, four for misconduct, and one transferred to another station. There are three assistants now on duty, and all are worked to their full capacity, and are commended by the observer for attention to duty.

In reference to the interest taken in the service the observer remarks as follows in his semi-annual report for the period ending June 30, 1873:

It is unnecessary to say very much on this subject. The service speaks for itself. Its advancement and continued progress in the well-wishes of all our prominent business men is a well-known fact. As a prominent member of the board of trade remarked: "Stop this service for one month and its necessity would become so apparent to the public interests that any favor they might ask Congress would gladly grant." Many instances might be given where there have been large sums of money at stake, and difficult questions have arisen which have been solved by the signal-service. For want of time I will mention but one. A vessel, with cargo fully insured in this city, was lost in a storm at sea, about half way between New York and New London, Conn., some time in July, 1872. The owners claimed the insurance for the full amount, vessel and cargo. Some doubt seems to have arisen about the affair, and more especially as to the wind and weather in that locality at the time the loss occurred. Mr. Steelman, secretary of the vessel-owners' association, called at the observer's office for information as to the state of weather, velocity and direction of wind at New York and New London at midnight of July 24, 1872. This happened at the time the reports were suspended, and no data could be furnished by this office. The observer addressed a communication to the observers in New York and New London, and the reports, as received from those stations, were taken as evidence in court, and the case was decided in favor of the insurance company, who proved that on the night in question there was only a fresh wind and clear weather at both of those stations, and it was very improbable for a storm to have occurred at so short a distance from the land at that time. It was ascertained afterward that the vessel was scuttled and sunk purposely to get the large insurance. This is but one of the many cases which might be cited.

PIKE'S PEAK, COLORADO.

[*Official Number*, 99.]

Latitude	38° 48′
Longitude	104° 59′
Elevation of summit above sea-level	14,216 feet.

Digitized by Google

Sergt. George Boehmer was ordered to this station July 21, 1873, to make the necessary arrangements for its establishment. As seventeen miles of telegraph-line had to be built, and the same amount of road made, to render the summit accessible before a shelter could be erected, considerable delay has necessarily occurred in getting ready for work. It is expected, however, that regular observations will be made from and after October 11, 1873. Four assistants are on duty, one of whom is a sergeant, and who, with one other assistant, will remain at the base to forward supplies to the party on the summit. An office has been rented at Colorado Springs for the use of the lower party, which can be made available as a station, should observation be desired in the future from this point.

PITTSBURGH, PENNSYLVANIA.

[*Official Number*, 41.]

Latitude	40° 32′
Longitude	80° 02′
Elevation of barometer above sea-level	791 feet.

The location of the office remains as at last report, and, being in the business center of the city, and within easy reach of the telegraph-offices, no change is recommended. Reports from twenty regular stations are received here, and also those from the special river-stations, whenever made. Four thousand one hundred and eighty-two regular, and nine hundred and eighty-seven river, bulletins have been issued during the year, and one hundred and four press-reports furnished for publication. One thousand six hundred and thirty-six manifold copies of the Synopsis and Probabilities have also been posted with the bulletins. The station has been supplied with the necessary apparatus for printing and issuing the midnight Synopsis and Probabilities to all post-offices that can be reached by 3 o'clock in the afternoon of the same day. The issue to offices begins November 1, 1873. The station was inspected in November, 1872, and instruments and records found in fair condition.

Sergt. William E. Smith was relieved at his own urgent request, April 1, 1873, and succeeded by Sergeant J. B. Murray, who still remains, and under whose charge the interest in the service has largely increased. Two assistants have been called in successively during the year for promotion, both of whom went through the usual course of instruction at Fort Whipple and passed a satisfactory examination. Three assistants are now on duty, two of whom are printers, and all are favorably mentioned by the observer as being attentive to duty.

River-observations are made and reported in the usual manner, the gauge used being the same referred to in the last annual report as constructed by the city authorities. This gauge measures the depth of water in the channel. The greatest depth that can be measured by it is 35 feet, the least is 2 feet. When the water falls below 2 feet another gauge is used. The lowest water-mark known is 9 inches in the channel, the highest water has never reached the top of gauge.

The leading newspapers at the station publish all reports, and have displayed a marked interest in the development of the service, especially in connection with the river-reports. This part of the service is also warmly commended by the merchants and others engaged in the river-trade.

PORTLAND, MAINE.

[*Official Number*, 12.]

Latitude	43° 40′
Longitude	70° 14′
Elevation of barometer above sea-level	52 feet.

No change has been made in the location of the office since last report, but one is ordered as soon as suitable arrangements can be made for removal. This change is made in accordance with the recommendation of the inspecting officer, who visited the station in September of the present year.

No reports are received here, and therefore the only bulletins issued are those of the local observations, of which one thousand nine hundred and seventy-three copies have been furnished to the press. The leading newspapers also print the monthly abstracts of the local weather and the latest Probabilities received up to the hour of going topress.

Sergt. A. B. Williams remains in charge of the station, and has rendered all reports properly and promptly. One assistant has been ordered in and promoted during the year, after passing the usual examination. Private Charles Dill, the present assistant, has given satisfaction by his intelligence and attention to duty. Several errors in the manner of keeping the records were discovered by the inspector, and corrected under his supervision. A general desire is expressed by the citizens to have reports from other stations sent here as in previous years.

Thirty-six cautionary signals have been displayed during the year, of which twenty-five are reported as justified at the station. The observer makes the following remarks in reference to several of the signals:

November 7, 1872.—Boats in the harbor that had prepared to sail remained in, as the storm was quite violent at sea.

November 29–30, 1872.—The display of the signal was a benefit, as those vessels which were prepared to sail remained inside the harbor; those that were out came in considerably damaged and knocked to pieces.

December 9–10, 1872.—Quite a storm reported outside the harbor, doing considerable damage.

December 26–27, 1872.—The signal was hoisted several hours before the storm, affording sufficient time to make preparations, and no vessels left the harbor.

January 5–6, 1873.—Signal hoisted four hours before the commencement of gale, giving timely warning for vessels to prepare and remain in.

January 23–25, 1873.—Not much damage sustained by vessels, on account of the timely warning.

January 27–28, 1873.—From inquiry made, no vessels sustained injury in this port.

February 7–8, 1873.—No known damage sustained at this port.

March 15–17, 1873.—The gale broke the top off of the pole for the display of cautionary signals.

March 29, *April* 1, 1873.—By timely warning not a vessel left the harbor for their destination.

April 22–15, 1873.—Vessels all remained in the harbor; gale accompanied by heavy snow.

May 3–4, 1873.—Vessels all put into the harbor and remained.

August 14–15, 1873.—Gale light from the northeast at this station, but a heavy swell coming in from sea.

PORTLAND, OREGON.

[*Official Number*, 74.]

Latitude	45° 30′
Longitude	122° 27′ 30″
Elevation of barometer above sea-level	100 feet.

The office was moved December 21, 1872, to the building at the southwest corner of Washington and Front streets, where it still remains.

Digitized by Google

All instruments are well exposed and the shelter is of the standard pattern.

Sergt. Edwin Garland was relieved for neglect of duty October 18, 1872, and succeeded by Sergt. J. E. Evans, who still remains, and has given entire satisfaction by the promptness and regularity with which all reports have been forwarded.

Private Charles M. Brown was ordered to this station as assistant September 26, 1873, but has not yet reported his arrival. The station was inspected in October, 1872, and found in very bad condition, and the observer immediately relieved as before stated.

There being no reports received here, the only bulletins issued are those of the local observations, which are regularly furnished the press. The telegraph-office is not kept open for the transmission of the midnight reports, which are therefore not forwarded until the morning following. Three observations were lost during the year from the cause stated in the following extract from the observer's journal for August 2, 1873:

About 4.15 a. m. a fire broke out near the office of observation, and on account of its spreading so rapidly the 4.32 a. m. observation was neglected. At 7 a. m. I thought it advisable to prepare for the removal of instruments, &c., but by 11 a. m. the fire was checked on Front street, near the office. At the commencement of the fire the wind was very light, but, as the fire increased, the wind strengthened, backing from the northwest to west. Instruments replaced in time to take the 7 p. m. and 9 p. m. observations.

PUNTA RASSA, FLORIDA.

[*Official Number*, 59.]

Latitude	27° 00′
Longitude	82° 18′
Elevation of barometer above sea-level	17 feet.

The location of the office at this station has been removed to a small building erected by the observer at a trifling cost to the Government.

The station was inspected in January of the present year and found in as good condition as could be expected under the circumstances. Sergt. William Theodovius was transferred to Key West on account of a personal difficulty with the telegraph operators, and his place filled by Sergt. M. J. Shanefelter from the latter station, who still remains, and has discharged his duties intelligently and well, all reports having been forwarded promptly and regularly.

Private Healy was transferred to the central office February 21, 1873, and succeeded by Private E. K. Moore, who still remains, and has given satisfaction. No reports are received here.

ROCHESTER, NEW YORK.

[*Official Number*, 32.]

Latitude	43° 08′
Longitude	77° 51′
Elevation of barometer above sea-level	584 feet.

The office still remains in the eighth story of Powers' Block, at the corner of State and Maine streets, one of the best locations in the city.

Reports from fifty-five other stations are received here and published in the usual manner. During the year two thousand six hundred and

Digitized by Google

thirty-two manifold maps and five thousand and seventy-four bulletins have been issued, and eight hundred and fifty-nine press-reports furnished for publication. One thousand two hundred and eighty-eight manifold copies of the Synopsis and Probabilities have also been posted with the bulletins.

The three daily newspapers printed at the station publish regularly the latest Synopsis and Probabilities received, the Weekly Chronicle, monthly abstracts, tabulated press-reports, and also a daily local item giving a general summary of the weather at Rochester for the preceding twenty-four hours. Great interest has been displayed by the newspaper corps in the workings of the service.

The station was inspected in March of the present year and found in excellent condition. Sergt. F. M. M. Beall remains in charge, and has given entire satisfaction in his management. The inspector reports very favorably upon his zeal, attention to duty, promptness, and courtesy. He has recently commenced drawing the isobaric lines upon his manifold maps, and has been very accurate in his work in this and other respects. Private L. M. Crist was on duty as assistant until March 18, 1873, when he was promoted and assigned to the Cleveland station. He was succeeded by Private H. M. Wells, who still remains and is favorably mentioned by the observer for steadiness and good conduct. Sergeant Beall was permitted to leave the station for one month from August 4, and during his absence Sergt. George Onslow was in charge, having been sent from Fort Whipple for that purpose.

Twenty-four cautionary signals have been displayed during the year, of which thirteen are reported as fully, and three as partly justified, at the station. In reference to the results of these signals the observer remarks as follows:

October 16, 1872.—The storm was severe on the lake between 9 a. m. and 2 p. m. No vessel left port during "signal up," and none were observed out.

November 7–8, 1872.—No vessel left port during the display. The wind attained a velocity of thirty-five miles an hour, and from its variable force was dangerous. Many persons have mentioned their appreciation and use of the warning. The daily papers of the 8th instant make mention of its perfect reliability.

November 25–26, 1872.—The highest wind of the season. No vessels are known to have been out in the storm; navigation about closed.

November 27–28, 1872.—The velocity of the wind reached thirty-eight miles per hour, but was steady.

November 29–*December* 1, 1872.—Signal hoisted thirty-five hours before the storm reached the station. The storm followed, with low temperature, and was the most dangerous of the fall, the wind moving in fierce, sudden gusts, full of snow. The Erie Canal frozen up, and impassable to boats.

December 1–4, 1872.—The wind was steady, at twenty-eight miles an hour. No vessels entered or left the harbor; navigation about closed.

December 8–11, 1872.—The wind was very variable, accompanied by a light, fine, driving snow-storm.

December 13–16, 1872.—This signal closes a successful season of display, and they are suspended with a satisfactory increase of confidence in the ability of the service to make reliable storm-forecasts.

May 1–3, 1873.—Am informed by builders, shippers, and others, that a warning for an extensive rain is of as great value to their interests as a display for dangerous winds—the signal was, therefore, justified, as a cold, driving rain followed.

May 7–9, 1873.—It (the signal) had the usual effect of causing those whose business interests were affected by high winds and rain to prepare for the same. The community in general appear to have a settled and unquestioned dependence upon the signals

The inspector reports that a general desire is expressed in Rochester to have the signals repeated at Charlotte, seven miles distant, and on Lake Ontario, at the mouth of the Genessee River. The attention of the Chief Signal-Officer is respectfully invited to this subject.

SAN DIEGO, CALIFORNIA.

[*Official Number*, 75.]

Latitude	32° 44′ 41″
Longitude	117° 08′ 00″
Elevation of barometer above sea-level	62 feet.

No change has been made in the location of the office at this station since the date of last report.

No reports are received here from other stations, and the only bulletins issued are those of the local observations, which are furnished regularly to the local newspapers and printed in excellent shape.

The station was inspected in October, 1872, and found in very good condition.

Sergt. John B. Wells remains in charge, and all his mail reports have been forwarded with commendable promptness and neatness.

The telegraph office is closed at the regular hour for sending the midnight reports, and they are not forwarded until the morning of the next day.

There is no assistant on duty at this station.

SAN FRANCISCO, CALIFORNIA.

[*Official Number*, 29.]

Latitude	38° 47′ 35″
Longitude	122° 26′ 15″
Elevation of barometer above sea-level	60 feet.

The office at this station still remains in the Merchants' Exchange. Reports are received irregularly from nine other stations, and during the year one thousand four hundred and seventy bulletins have been issued.

Sergt. W. B. Webster remains in charge, and has forwarded all reports promptly and satisfactorily. He has displayed marked zeal and enterprise in collecting and copying, for the use of the central office, the meteorological information contained in the logs of the vessels arriving at San Francisco from foreign ports. It is to be hoped that other observers at sea-port stations will follow his example. Private George Onslow was ordered in for promotion April 10, 1873, and after going through the usual course of instruction at Fort Whipple passed his examination, and is now in charge of a station.

Private James Higgins was transferred from another branch of the service to signal duty March 14, and placed on duty as assistant at this station, where he still remains. His conduct has not been of a nature to make such transfers in the future desirable. The station was inspected in October, 1872, and found in good condition. The inspector states that the service does not appear to be widely known, but is fully appreciated by those who have studied its workings. The daily Probabilities are not received on the Pacific coast.

SANTA FÉ, NEW MEXICO.

[*Official Number*, 69.]

Latitude	35° 41′
Longitude	106° 10′
Elevation of barometer above sea-level	6,862.2 feet.

The location of this office was removed June 28, 1873, to the Senna's

Digitized by Google

Building, where it still remains, the change having been necessary to secure a better exposure for the different instruments.

The station was inspected in November, 1872, and found in fair condition. Sergt. John P. Clum remains in charge, and has forwarded his reports with moderate promptness.

He was absent for a month during the year, with permission, and the station was worked by an instructed civilian assistant. The telegraphic communication is very unreliable, and reports are consequently received irregularly. There is no regular assistant at this station, nor is any required, as no reports are received.

SAVANNAH, GEORGIA.

[*Official Number*, 22.]

Latitude	32° 05′
Longitude	81° 08′
Elevation of barometer above sea-level	71 feet.

No change has been made in the location of the office since the date of the last annual report.

The only reports received here are those from the West Indies and Florida stations, and are furnished regularly with the local observations for publication.

The station was inspected in February of the present year, and the instruments and records found in good condition.

The office itself needed some repairs, which have since been made.

Sergt. J. O. Manson is still in charge, and has given entire satisfaction.

All reports have been made promptly and properly by mail, and those by telegraph as regularly as the telegraphic facilities would permit.

Private McGillivray was ordered in for promotion June 3, and passed the required examination satisfactorily. He was succeeded by Private Hermann Frey, who is still on duty, and is favorably mentioned by the observer.

Twelve cautionary signals have been displayed during the year, of which four are reported as fully and two partly justified at the station. In reference to these signals the observer remarks:

October 23–24, 1872.—The wind blew steadily most of the day of the 23d, with some gusts in the afternoon. Several vessels were detained by the signal. From information received it appears that a severe gale was experienced along the immediate coast.

March 23–25, 1873.—The success that the department has attained as to accuracy in displaying cautionary signals begins to inspire in the breast of the mariner in port respect for the science which, on many an occasion during the last year, has indirectly saved numbers of vessels from destruction.

March 25–26, 1873.—No vessels left port during the display of this and the previous signal.

April 1–2, 1873.—The wind attained a velocity of thirty-six miles an hour. No injury resulted. Many persons doubted the verification of this signal, as the weather was very pleasant and clear at the time of hoisting.

September 19–20, 1873.—The wind reached a velocity of forty-eight miles an hour, with a southeast direction until 8 p. m. of the 19th, when it changed to west and then to northwest. No vessels left port during the day, and much uneasiness was felt by parties in vessels that left before the display of the signal was made.

SHREVEPORT, LOUISIANA.

Elevation of barometer above sea-level	228. 5 feet.

Digitized by Google

No change has been made in the location of the office since the date of last report. No reports are received here and no bulletins issued, except those of the local observations, which have been regularly furnished the press.

The station was inspected in March of the present year, and found in excellent condition.

Sergt. Hugh Coyle was in charge until his death from yellow fever, September 28, 1873, since which date the work has been done by Private John G. Lynch. Sergeant Coyle was one of the most faithful men of the service, and an earnest and conscientious worker. All his reports were forwarded promptly, and in perfect order. Two assistants have been called in successively for promotion during the year, one of whom is now reviewing his course of instructions, and the other has been relieved from duty in this division of the service for misconduct. Private Lynch, the present assistant, has discharged his duties intelligently and well, and is now in sole charge of the station.

River observations are made and reported here in the usual manner, the gauge used being one constructed by the observer, under the direction of this office.

The reference point in reporting depth of river is in the bed of river, and 40 feet below high water of 1849, and 25 feet above bottom of river. From bottom of river to high-water mark of 1849 is 65 feet.

Considerable interest is taken in the service here, especially in that part of it connected with the river-reports.

SAINT LOUIS, MISSOURI.

[*Official Number*, 66.]

Latitude	38° 37′ 28″
Longitude	90° 15′ 16″
Elevation of barometer above sea-level	543.54 feet.

The office was removed March 1, 1873, to the building of the Saint Louis Mutual Life Insurance Company, at the corner of Sixth and Locusts streets, where it now remains.

The officers of the insurance company and the members of the Chamber of Commerce have contributed liberally to the equipment of the station, and are entitled to the thanks of the office for their action. The present office is reported to be more convenient and better equipped than that of any other station. Reports from twenty-nine other stations are received here in the morning, with more or less regularity. In the afternoon the same reports are received, with the addition of those from all the special river-stations, and at midnight the number of regular reports is increased to seventy-six, from which a map is prepared, printed in time for distribution by daylight each morning, including Sunday.

During the year, fifty-three thousand one hundred and eighty maps, sixteen thousand six hundred and eighty-six regular, and six thousand and thirty-eight river bulletins have been issued, and three thousand and ninety-four press-reports furnished for publication. The station was made one of the centers of distribution for the printed Synopsis and Probabilities to post-offices, and on September 1, 1873, the issue was commenced to four hundred and fifty-five offices, two copies being furnished to each. The station was inspected in June of the present year, and the instruments, records, and office found in excellent condition.

Sergt. E. H. Singleton remains in charge, although it is proposed

Digitized by Google

to transfer him to a larger field of duty at an early date. He has displayed unusual intelligence and ability in the manner in which he has discharged his duties and extended the usefulness of the service at this station, and he is commended to the especial attention of the Chief Signal-Officer. The inspector refers to him in the following strong terms of approval:

I have inspected every important station in the country, excepting Cincinnati, and consider the Saint Louis office the best managed of any, and that the interests of the service have been advanced more by the work of this station than of any other single one.

Four assistants have been relieved from duty at this station during the year for misconduct, two transferred to other stations, and one called in for promotion, who subsequently passed the required examination. Seven assistants are now on duty, of whom one is a sergeant, (W. O. Bailey,) sent to relieve the observer of a portion of his responsibility. All these men are worked to their full capacity, as the record of work shows, and all are favorably mentioned for general good conduct.

Through the agency of Sergeant Singleton, the police force of the city has been enlisted in the meterological service to the extent of making daily reports on forms furnished from the central office, and which have been proved of value in working up the local meteorology of the station. The chief of police has shown a commendable degree of public spirit in ordering this work done.

Arrangements have been made also by the observer for a wide distribution of the reports through the agency of the several railroad lines leading into Saint Louis, the nature of which is fully explained in the following statement of the observer:

At the last session of the State Board of Agriculture, held in this city, your observer was invited by that body to appear before them and explain in what manner the reports could be best utilized. With this request I complied, and I also suggested means whereby the farmers of Missouri and surrounding States could be put in possession of information sent daily from Washington, which would be of great value to them; the plan being simply to interest the railroad management in the matter, and to induce them to transmit the daily weather-reports over the wires gratis. From want of proper and concerted action upon the part of the various agricultural associations, the matter was left in abeyance until April last, when your observer, after consulting with several prominent railroad officials, determined to address a letter to the respective railroad presidents, briefly pointing out the advantages to be derived by furnishing their employés information as to the probable state of the weather. This letter met the approbation of the gentlemen addressed, and its provisions were immediately carried into effect, the operators at all telegraph stations being instructed to post a copy of the dispatch sent them in a conspicuous place in their office, and at large stations, where papers are published, duplicate copies were to be made on forms furnished by this office, that those papers might avail themselves of them. In addition to this work, the baggage-masters of morning trains were ordered to leave at each station, upon arrival, previous to 5 p. m., one of the daily weather-maps.

The Saint Louis, Rockford and Rock Island Railroad was the first to put this plan in operation; the action of this road was quickly followed by the Saint Louis, Vandalia and Indianapolis, the Cairo Short Line, the Saint Louis, Kansas City and Northern, the Chicago and Alton, the Saint Louis and Iron Mountain, and the Saint Louis and Southeastern; and thus the reports are distributed over a very large extent of country.

The press of this station has shown a marked degree of interest in the development of the service, and have published full reports in fine shape, and assisted the observer in many ways.

Mr. George H. Plant, chairman of the meteorological committee of the Chamber of Commerce, has also manifested a lively interest in the service.

River-observations are made here, and reported in the usual manner, and are received with great favor by the parties engaged in the river-trade.

SAINT PAUL, MINNESOTA.

[*Official Number*, 39.]

Latitude	44° 53′
Longitude	93° 05′
Elevation of barometer above sea-level	794.53 feet.

The office still remains at the corner of Third and Market streets, and is favorably located. Reports from six northwestern stations are received here for transfer to Milwaukee and for local publication. The reports from all the principal river-stations are also sent here during the seasons of high and low water in the Mississippi, and of these five hundred and twenty-nine bulletins have been issued.

The local observations have been furnished to the press regularly and are published, together with the latest Probabilities received. The station was inspected in May of the present year and found in very bad condition, and the immediate relief of both observer and assistant was found necessary.

Sergt. C. W. Held was relieved for neglect of duty, May 15, 1873, and subsequently reduced to the ranks upon the recommendation of the inspector. He was succeeded by Sergt. H. E. Cole, who still remains, and has given entire satisfaction by the promptness and regularity with which he has forwarded all reports and the very neat manner in which they are made out. Two assistants have been relieved in succession during the year, one of whom deserted before reaching Fort Whipple.

Private James A. Barwick, the present assistant, has been on duty here since July 17, 1873, and been faithful and attentive.

Regular river observations are made and reported daily in the usual manner. The bench-mark is at the pier of the bridge, and is marked at extreme low water of 1864. The daily report of river is the depth of water above that mark. The depth of water in the channel at extreme low water is 1 foot 11 inches. There is no reliable high-water mark.

ISLAND OF SAINT PAUL'S, ALEUTIAN ISLANDS.

Latitude	57° 02′
Longitude	170° 00′
Elevation of barometer above sea-level	Unknown.

Reports have been received from the observer at this station for the period from June 5, 1872, to May 31, 1873, as shown in the special report already submitted. Private Charles P. Fish remains on duty, and his reports show that he has carried out his instructions in an intelligent and faithful manner.

SPRINGFIELD, MASSACHUSETTS.

This is not a reporting station, but was established July 19, 1873, for the distribution of printed copies of the midnight Synopsis and Probabilities to such post-offices as could be reached daily by 3 o'clock p. m. Private John G. Murray has worked the station alone, and given full satisfaction. He began work on the 28th of July, and supplies seventy-one offices daily. The office is in the Republican building, and in every way a desirable one.

TOLEDO, OHIO.

[*Official Number*, 35.]

Latitude	41° 4[illegible]
Longitude	83° 3[illegible]
Elevation of barometer above sea-level	649.5 fee[illegible]

The office is located in the fifth story of the chamber of commerc[illegible]

Digitized by Google

building, at the corner of Madison and Summit streets, in the business center of the city, within convenient reach of the telegraph-offices and the various public buildings. An excellent exposure is afforded by the roof for the several instruments and the display of cautionary signals. The instrument-shelter is of the standard pattern, and projects from a window on the northeastern side of the building. The location of this shelter is not a good one, but is the best attainable at present. Reports from fifty-five stations are received here and published in the usual manner. During the year two thousand and ninety-eight manifold maps and three thousand seven hundred and six bulletins have been issued, and one hundred and fifty-five reports furnished to the press. In addition to this, nine hundred and eighty-two manifold copies of the Synopsis and Probabilities have been posted with the bulletins.

The station has been twice inspected during the year—once in October, 1872, and again in March of the present year. It was found in fair condition at both inspections. Sergt. A. C. Ford was relieved January 2, 1873, and transferred to the Chicago station, and was succeeded by Sergeant J. E. Cook, who still remains in charge and has forwarded all reports promptly and properly. The inspector commends him for his zeal and general good conduct. The record of work done, given above, shows that he has displayed a commendable energy in getting his reports before the public. Two assistants have been called in successively for promotion, and both have passed the required examination.

Private William McElroy is the present assistant, and has been on duty in that capacity since April 14. The observer speaks in warm terms of his attention to duty and capacity. The leading newspapers publish the tabulated reports from a selected number of stations, the monthly abstracts of local weather and latest probabilities received. A lively interest is manifested in the service among the citizens, and the office is visited daily by parties in search of meteorological information. Twenty-seven cautionary signals have been displayed during the year, of which seventeen are reported as justified at the station.

The observer remarks, in reference to these displays, as follows:

October 29–31, 1872.—Several persons made application for information, and a number of vessels detained in the harbor on account of the signal.

November 13–14, 1873.—Several vessels remained in port, and the masters of them made inquiries at the office, and expressed their entire satisfaction at the result of the warning.

May 6–9, 1873.—The schooner Minnie Powell left port on the morning of the 6th, and sprung a leak soon after getting into the lake, and was towed back some distance and sank. Amount of damage unknown.

VICKSBURGH, MISSISSIPPI.

[*Official Number*, 61.]

Latitude	32° 23′
Longitude	90° 54′
Elevation of barometer above sea-level	280 feet.

The office was removed October 1, 1872, to the third story of the building at the corner of Washington and Crawford streets. It is in the business center of the city, and in every respect well located. The instrument-shelter is of the standard pattern, and projects from a window with a northern exposure. The only reports received here are those from the principal river-stations in the afternoon. One thousand five hundred and eleven bulletins containing these reports have been issued during the year, and the local observations are furnished to the

Digitized by Google

press whenever they will be published. But little interest is felt here in the service, except in connection with the river-reports, which are received with great favor.

The station was inspected in March of the present year, and the office, instruments, and records found in excellent condition.

Sergt. John Dascomb has been in charge of the station since October 4, 1872, on which date he was transferred here from Du Luth. His mail reports are promptly and properly rendered. Two assistants have been called in, successively, for promotion, and passed the required examination, after the usual instruction at Fort Whipple. One assistant, Private A. B. Hiltman, was ordered in for misconduct, June 16, and succeeded by Private C. L. Josselyn, who still remains and has given satisfaction.

River observations are made regularly and reported in the usual manner, the gauge used being the one constructed by the United States Engineer Corps, to which reference was made in the last annual report.

The midnight reports are not forwarded until the telegraph-office opens for business the next day, and as this is some time after the regular time of taking the morning observation, both reports are delayed. Until better telegraphic arrangements can be made, additional reports cannot be sent to the station with sufficient promptness to make them useful.

VIRGINIA CITY, MONTANA.

[*Official Number*, 77.]

Latitude	45° 00
Longitude	112° 03
Elevation of barometer above sea-level	5510 feet.

The office was removed on the 1st of July, 1873, but as the station has not been inspected since the change of office, no detailed account of its location or of the instruments can be given.

The latter are reported in good condition by the observer.

No reports are received here, and therefore no bulletins are issued.

Sergt. A. B. Knight was relieved for gross neglect of duty May 29, 1873, and reduced to the ranks. He was succeeded by Sergt. F. H. Wash, who also failed in his duty, and was relieved September 26, at which date Sergt. J. B. Campbell was ordered to the station. This station is the only one at which the work has been systematically neglected by its observers.

WASHINGTON, DISTRICT OF COLUMBIA.

[*Official Number*, 19.]

Latitude	38° 53′
Longitude	77° 01′
Elevation of barometer above sea-level	105. 56 feet.

The office remains as last year in the third story of the double building occupied by the Chief Signal Officer, at 1719 and 1721 G street, and the station, instruments, and records are in good condition. Sergt. Theodore Smith has been in immediate charge during the year, and the ability with which his duties have been performed has received tangible recognition from the honorable Secretary of War in an appointment as second lieutenant in the United States Army. Sergeant Smith has also had direct charge of the comparison, correction, and preservation of all records and reports received from repeating-stations, and has got them conveniently arranged for reference whenever needed. Ser-

Digitized by Google

geants T. B. Jennings and E. B. Robbins have had charge of the first and second night-reliefs, respectively, and have been faithful and constant in their attention to duty.

Sergt. J. B. Newlin continues in charge of the correspondence, and has also taken charge of the station in the occasional absence of Sergeant Smith. He has been prompt and regular in attendance, and performed all duties assigned him satisfactorily.

Sergt. P. F. Nagle remains in charge of the lithographic rooms, and Sergt. H. C. Hirst of the printing-room. Both men have been zealous and constant in the performance of their duties, and have brought the work in their respective rooms to a high state of perfection. All the men now employed as assistants in the several rooms under my charge give satisfaction, and very few instances of misconduct or of neglect of duty have occurred during the year.

Reports from all stations are received here, and three maps are issued daily, being one for each of the tri-daily reports. One hundred and thirty-two thousand six hundred and eighty-two maps and sixteen thousand nine hundred and nineteen bulletins have been issued during the year, and one thousand one hundred and fifty-five press-reports furnished for publication. The issue of printed copies of the midnight "Synopsis and Probabilities" to one hundred and forty-six post-offices was commenced January 4, 1873, since which date seventy-five thousand five hundred and twenty-three copies have been distributed. In addition to these publications, nine thousand four hundred and two copies of the Weekly Chronicle and six thousand seven hundred and ninety-six copies of the Monthly Weather Review have been printed and distributed.

WILMINGTON, NORTH CAROLINA.

[*Official Number*, 20.]

Latitude	34° 11′
Longitude	78° 10′
Elevation of barometer above sea-level	30.7 feet.

No change has been made in the location of the office since the date of last report. No reports are received here from other stations, and the only bulletins issued are those of the local observations, which are furnished regularly to the daily newspapers, and printed with the latest Probabilities received.

The station has not been inspected since July, 1872, but the observer reports the records and instruments in good condition. Sergt. Robert Seyboth was transferred to the central office April 10, 1873, and succeeded by Sergt. Otto Schutze, who is now in charge, and has rendered all reports promptly and in excellent form.

Two assistants have been relieved during the year for misconduct, and one called in for promotion, who passed the usual examination. The present assistant is J. C. Senger, who has been on duty since August 12, 1873, and given satisfaction.

Twenty cautionary signals have been displayed here during the year, of which thirteen are reported as fully, and four as partly, justified at the station. The observer makes the following remarks in reference to these displays:

October 23–25, 1872.—The gale having been signaled sixteen hours in advance, the shipping in port were prepared for it, consequently no damage was done.
November 29–30, 1872.—No damage or injury reported.
February 27–28, 1873.—No injury to vessels reported.
March 2–4, 1873.—No vessels left port during the display, although several intended

Digitized by Google

to do so on Sunday and Monday. An unusually severe storm is reported to have prevailed on Sunday afternoon on the North Carolina coast.

March 19–21, 1873.—No vessel left port during the display of signal, and no damage is reported.

March 23–27, 1873.—No damage done to the shipping in port, and no vessel left the harbor during the display of the signal.

March 28–30, 1873.—Three large foreign vessels were about to sail on Friday night, but remained in port on account of the cautionary signal. No damage done in port.

April 9–10, 1873.—A Norwegian brig and the schooner John went to sea before the signal was hoisted; both vessels, becoming unmanagable before they were out of the channel, collided heavily and were badly damaged.

September 19–20, 1873.—The signal was heeded by mariners, merchants, and the public. One of the most violent storms known for a number of years prevailed here from 1.30 a. m. to 5 a. m. of the 20th, the wind attaining a velocity of forty-eight miles per hour. Trees were torn up by the roots, chimneys and fences blown down, and large trees that heretofore had battled successfully with rude Boreas were compelled to bow in obedience to his mighty power. North of the city the storm was even more severe, destroying barns and out-houses, killing and crippling numbers of cattle, the rain coming down in torrents all the while.

WOOD'S HOLE, MASSACHUSETTS.

[*Official Number*, 60.]

Latitude	41° 33′
Longitude	70° 40′
Elevation of barometer above sea-level	25 feet.

This station was opened December 4, 1872, by Sergt. J. K. P. Purdum, who remains in charge. All the regular observations are made daily, but none are forwarded by telegraph, except when the instrumental indications are unusually threatening.

The principal object of the station is the display of cautionary signals, of which sixteen have been ordered during the year, and eleven of these reported as justified at the station.

The observer remarks, in reference to the verification of these signals, as follows:

March 8, 1873.—No damage, as far as heard from. At 11.26 p. m., the wind had a velocity of thirty-five miles per hour.

March 11–12, 1873.—The signal caused some vessels to stay in harbor—one captain said he would have lost his vessel had he made sail.

March 20–23, 1873.—The signal prevented several vessels from leaving port, and thus they escaped the gale. The captain of the steamer Island Home won't leave port while the signal is hoisted. No damage reported.

March 24–28, 1873.—Several vessels anchored in the harbor, and escaped the gale.

April 16–18, 1873.—One vessel wrecked on Broad Shoal, four and a half miles from Nobsque light-house; all the crew saved.

May 2–5, 1873.—The Island Home did not leave port, and escaped the gale.

May 8–9, 1873.—No damage reported. Several vessels anchored in the harbor during the gale.

August 13–15, 1873.—No damage at this place. The steamer New Bedford took warning, and did not run her trips; also the steamer Island Home.

The office is on Water street, and well located, in a meteorological point of view. The instrument shelter, which is of the standard pattern, projects in the usual manner from a window facing the north.

The anemometer, wind-vane, and rain-gauge are placed on a platform built on the roof of a shed connected with the house in which the office is located, and are well exposed.

The fishermen of the place are of the opinion that it is one of the most important points on the coast for the display of signals, as it is not unusual for from 200 to 300 vessels to seek shelter in the harbor in case of storms.

The station was inspected in January of the present year, and found

Digitized by Google

in a fair condition; but all errors were corrected under the supervision of the inspector.

The observer has forwarded all his mail reports promptly and in a satisfactory shape.

WYTHEVILLE, VIRGINIA.

[*Official Number*, 91.]

Latitude	36° 58′
Longitude	81° 05′
Elevation of barometer above sea-level	2294.8 feet.

This station was occupied January 16, 1873, by Sergt. F. Z. Gosewisch, who still remains in charge and has given entire satisfaction by the prompt and neat manner with which all reports have been forwarded.

The office is well located over the store of Messrs. Crush & Snow, and the roof exposure of the instruments is good. The station has not been inspected, and the details of the position of the several instruments is unknown. Their condition is reported as good by the observer. No reports are received here and none sent by telegraph, the station being one of observation alone. The local observations are regularly furnished to the press.

YANKTON, DAKOTA.

[*Official Number*, 95.]

Latitude	42° 50′
Longitude	96° 44′
Elevation of barometer above sea-level	1296 feet.

An observer was ordered to this station March 11, 1873, and he began sending regular telegraphic reports April 1, 1873. The office was at first located some distance from the town in a building belonging to Mr. Clevenger, and fitted up for the purpose by that gentleman, but as the wire by which it was connected with the main telegraph-office did not work satisfactorily, the observer moved, July 3, to a room on the third floor of the St. Charles Hotel, at the corner of Capitol and Third streets, where it is eligibly located and convenient of access to the principal public buildings and to the river. The roof exposure of the instruments is excellent. The instrument-shelter projects in the usual manner from one of the office windows, facing west, as a northern front could not be obtained.

No reports are received here, and consequently no bulletins issued, except those of the local observations, which, with the monthly abstracts, are regularly furnished the Weekly Press, and published in good form.

The station was inspected in July of the present year, and found in good condition. Several irregularities in the manner of keeping the records were discovered, and corrected under the supervision of the inspector. Sergt. N. Phelps has been in charge of the station since its establishment, with the exception of one month, when he was absent with permission, and his place filled by Sergt. George Onslow. All mail reports have been forwarded promptly and in proper form. River observations are made and reported in the usual manner each afternoon. The gauge used is one constructed by the observer, and although roughly made, is accurately graduated. The bed of river is the zero point of the gauge, and the actual depth of water in the channel is therefore reported.

Digitized by Google

In reference to the interest taken in the service the inspecting officer remarks as follows:

I learn from most reliable sources, Governor Burbank, Colonel Foster, A. Q. M., and other gentlemen, that a misapprehension existed among the citizens and others as to the scope of the observer's duties at this point. They supposed that he was to foretell storms, and when the exceedingly severe storm of April 13 came upon them without warning, driving from their camp into private houses the men of the Seventh Cavalry, there was a great feeling of bitterness toward the observer by the enlisted men of that organization, and they threatened violence to him within hearing of citizens. The observer was then located in the suburbs, and did not visit town, and so had no personal threats. The misunderstanding as to his duties has been removed, yet the citizens retain their interest in the service.

SPECIAL RIVER-STATIONS.

Since the date of the last annual report nineteen stations have been selected on the principal western rivers and their tributaries, at which regular river observations are made and reported to this office by telegraph. These stations are independent of those occupied by enlisted men of the signal-service, and the observations are limited to the rise and fall of the rivers in which they are located, the state of the weather, and the direction of wind at the time of report. Each station is in charge of some well-known citizen, who takes sufficient interest in the service to make the observations regularly and correctly, and the general result of the past year's experience has been satisfactory in demonstrating both the practicability and the usefulness of the work. The reports are sent over all the river circuits, and dropped at each of the regular stations on the principal rivers. The following table shows the names of the several stations, the rivers upon which they are located, the name of the observer, and the date at which each began reporting:

	Stations.	Rivers.	Names.	Commenced reporting.
1	Freeport, Pa	Alleghany	David Alter	April 17, 1873
2	Hermann, Mo	Missouri	Edward Kehr	April 24, 1873
3	Jefferson City, Mo	do	Louis C. Lohman	May 12, 1873
4	Oil City, Pa	Alleghany	J. D. Thompson	April 20, 1873
5	Brownsville, Pa	Monongahela	J. Allen Hubbs	June 6, 1873
6	Evansville, Ind	Ohio	A. C. Pushee	April 21, 1873
7	Confluence, Pa	Youghiogheny	M. Tannehill	April 23, 1873
8	New Geneva, Pa	Monongahela	H. T. Davenport	April 24, 1873
9	Lexington, Mo	Missouri	Z. S. Mitchell	April 28, 1873
10	Kansas City, Mo	do	H. A. M. Vaughan	April 21, 1873
11	Brunswick, Mo	do	G. D. Kennedy	May 1, 1873
12	Little Rock, Ark	Arkansas	C. H. Conradt	April 21, 1873
13	Plattsmouth, Nebr	Missouri	A. L. Child, M. D	April 20, 1873
14	Marietta, Ohio	Ohio	J. H. Best	April 19, 1873
15	Saint Joseph, Missouri	Missouri	A. L. Kerr	May 8, 1873
16	Warsaw, Ill	Mississippi	D. H. Cox	May 7, 1873
17	Paducah, Ky	Ohio	Capt. C. Bachman	May 1, 1873
18	Booneville, Mo	Missouri	W. H. Young	April 28, 1873
19	Le Claire, Iowa	Mississippi	J. P. Disney	June 2, 1873

From July 1 to the present date, only one report per week from each station has been received by telegraph; but the observations have been kept up regularly at all of them, and reported weekly by mail on the established form adopted by the office. The regular daily telegraphic reports will be resumed October 1 and continue until the close of navigation renders them unnecessary. The instructions issued to these special stations, with the cipher in which the reports are transmitted, and the location of the "bench-marks" at all the river-stations, both regular and special, have been previously submitted to you and approved. Other instructions will be issued from time to time, as occasion requires.

WEST INDIA ISLANDS.

HAVANA, CUBA.

[*Official Number*, 100.]

Latitude	23° 9′ 24″
Longitude	82° 22′
Elevation of barometer above sea-level	21.66 feet.

Observations were commenced at this station June 22, by Mr. Charles Hasselbrink, and forwarded weekly by mail on the regular form until August 6, 1873, when the transmission of the morning and afternoon reports by telegraph began, and has been continued with as much regularity as the telegraphic facilities would permit. The midnight reports cannot be sent under the present arrangements, as the telegraph-office closes in the afternoon.

The observation office is at No. 63 Neptune street, and is believed to be well located.

KINGSTON, JAMAICA.

[*Official Number*, 4.]

Latitude	17° 58′
Longitude	76° 47′ 30″
Elevation of barometer above sea-level	unknown.

Observations are taken by Mr. James Gall, who began reporting by telegraph September 18, 1873, and has sent two reports daily since that date, with as much regularity as the telegraphic facilities will permit.

The midnight report cannot be sent from this station at present, as the telegraph-office closes in the afternoon.

The office is at "Myrtle Bank," and Mr. Gall has taken all necessary steps to make his station useful and his reports accurate.

SANTIAGO DE CUBA.

[*Official Number*, 3.]

Latitude	20° 00′
Longitude	76° 00′
Elevation of barometer above sea-level	unknown.

The first report from this station was received September 29, 1873, and was not a full one, as the authorities would not permit the use of cipher. As their action appears to be based upon a misunderstanding of the purpose for which the cipher is used, application has been made to have the restriction removed, and the agent reports that it will probably prove successful. Until this is done reports will not have the same value as those from other stations, as they are limited to the usual ten words.

CANADIAN STATIONS.

Regular telegraphic reports are now received from eleven stations in the Dominion of Canada and other British provinces. Their names and position are given below:

Digitized by Google

TORONTO, ONTARIO.

[*Official Number*, 58.]

Latitude	43° 39′ 24″
Longitude	79° 21′
Elevation of barometer above sea-level	342 feet.

Reports have been received regularly during the whole year via Buffalo.

MONTREAL, QUEBEC.

[*Official Number*, 56.]

Latitude	45° 30′
Longitude	73° 25′
Elevation of barometer above sea-level	

Observations are made and reported regularly by Professor Charles Smallwood, director of the Montreal Observatory, one of the oldest and most experienced observers in the Dominion.

QUEBEC, QUEBEC.

[*Official Number*, 57.]

Latitude	46° 29′ 12″
Longitude	71° 13′ 45″
Elevation of barometer above sea-level	336 feet.

Reports have been received regularly via Buffalo.

KINGSTON, ONTARIO.

[*Official Number*, 80.]

Latitude	44° 12′
Longitude	75° 41′
Elevation of barometer above sea-level	326.7 feet.

Reports have been received regularly via Buffalo.

PORT STANLEY, ONTARIO.

[*Official Number*, 78.]

Latitude	42° 40′
Longitude	81° 13′
Elevation of barometer above sea-level	584 feet.

Reports have been regularly received via Buffalo.

PORT DOVER, ONTARIO.

[*Official Number*, 79.]

Latitude	42° 47′
Longitude	80° 13′
Elevation of barometer above sea-level	619 feet.

Reports have been received regularly via Buffalo.

SAUGEEN, ONTARIO.

[*Official Number*, 81.]

Latitude	42° 40′
Longitude	81° 16′
Elevation of barometer above sea-level	597 feet.

Reports have been received regularly via Buffalo.

FORT GARRY, MANITOBA.

[*Official Number*, 88.]

Latitude	49° 52′
Longitude	96° 58′
Elevation of barometer above sea-level	654 feet.

Reports began January 1, 1873, and have been regularly received via Saint Paul, Minn.

HALIFAX, NOVA SCOTIA.

[*Official Number*, 89.]

Latitude	44° 39′ 42″
Longitude	63° 35′ 30″
Elevation of barometer above sea-level	

Began reporting regularly December 9, 1872, and received via Buffalo.

CHATHAM, NEW BRUNSWICK.

[*Official Number*, 2.]

Latitude	47° 01′
Longitude	65° 30′
Elevation of barometer above sea-level	

Began reporting September 23, 1873, and received via Buffalo.

CAPE ROZIER, QUEBEC.

[*Official Number*, 1.]

Latitude	48° 56′
Longitude	64° 21′
Elevation of barometer above sea-level	

Began reporting September 27, 1873, and received via Buffalo.

The reports from all these stations, except Fort Garry, are collected at Toronto by Prof. G. T. Kingston, the chief of the Dominion meteorological bureau, and forwarded by him in a consolidated form. The same cipher is used as for those made at the regular stations in the United States, and weekly transcripts of the observations are forwarded regularly by mail on forms prepared by Professor Kingston. The numbers given the several stations are for the convenience of our own observers in reporting them on Form 19.

RECAPITULATION.

Number of sergeants on station at this date	88
Number of assistants on station at this date	93
Number of deaths during the year	5
Number of desertions during the year	5
Of the deaths, three were accidental and two from yellow fever.	
Total number of maps issued during year	320,770
Total number of regular bulletins issued during year	143,097
Total number of river-bulletins issued during year	23,210
Total number of press-reports issued during year	23,224
Total number of post-office bulletins issued during year	895,014

Paper 13 is a table of condensed meteorological statistics reported from these stations. The report from the observer on the island of Saint Paul, in the Aleutian group, presents some points of peculiar interest, and is given separately in Paper 14.

Digitized by Google

There are seventy-eight stations now established in the United States and in regular operation, being an increase of thirteen during the year. The plan on which these have been designated was minutely described in the last annual report.

For the exact study of the phenomena of the upper portions of the atmosphere, and to determine more accurately the proper reductions to be made for great elevations, temporary stations have been established at favorable points. In addition to the regular station on the summit of Mount Washington, New Hampshire, three others, one at the base, and two dividing the interval between the base and the summit, were in operation between June 1 and July 31, (Paper 15.) The summit of Mount Mitchell, North Carolina, was occupied as a station during the months of June, July, and August, and the base of that mountain was also occupied during August, (Paper 16.) For similar reasons the difficult task of establishing a permanent telegraphic station on the summit of Pike's Peak, Colorado, at an elevation of 14,216 feet, has been accomplished, and the station is now in operation. A telegraphic line seventeen miles in length has been built to connect the summit with Colorado Springs, and a road has been made by which it is easily accessible. A substantial building has been erected on the crest of the peak. By the care of the honorable the Secretary of War proper steps have been taken to declare a portion of the mountain to be a Government reservation.

Material aid has been contributed to the establishment of this station by citizens of Colorado Springs, and by the officers of the Denver and Rio Grande Railroad Company. Mr. Matt. France, of Colorado Springs, and Mr. B. F. Woodward, of Denver, are entitled to special thanks for their exertions. It is in contemplation to take observations from the base of the mountain, as well as the summit, during a period sufficient for useful comparisons. The discussion of these observations will be entered upon as soon as is practicable.

The system of thorough inspection of each station by officers specially instructed for the purpose, alluded to in the last annual report, has been continued, experience showing it to be indispensable. First Lieut. Charles S. Smith, Fourth United States Artillery, acting signal-officer, continued on that duty from October last until April 5, subsequently being relieved from detail with this office. First Lieut. A. W. Greely, Fifth United States Cavalry, acting signal-officer, has been during the whole year engaged in inspection duty, to the manifest benefit of the service. Paper 17 shows the dates at which sixty-four separate stations have been inspected and by whom.

The reports now received by comity of exchange with the Dominion of Canada are from eleven stations, four having been added during the year. Return reports are telegraphed to Prof. G. T. Kingston, of Toronto, chief of the meteorological bureau of the Dominion, at his request. Separate reports have also been received from Prof. Charles Smallwood, director of the Montreal Observatory. Warnings are given to the meteorological bureau of the Dominion whenever the conditions known at this office are such as to indicate unusually dangerous weather on the lower lakes or eastern provincial coasts, in a manner and by a special arrangement of cipher agreed upon. The immediate value of this international system to both countries is now frequently shown, while its future good results, political and practical, will increase by time, and with the more thorough interchange which will follow the extension of both services.

After much delay arrangements have been completed by which telegraphic reports, regarded as essential for meteoric indications, are

Digitized by Google

obtained from the West India Islands. The regular telegraphic reports from Havana, Cuba, began on August 6, from Kingston, Jamaica, on September 18, and from Santiago de Cuba, on September 29. Three other points in the islands of Porto Rico, Guadeloupe, and Barbados will be equipped as soon as observers can be designated. The arrangements are, in brief, that the observers at the stations are residents of the locality, specially recommended for their fitness, and the instruments are furnished by this office, which also pays for telegraphing the reports. The West India and Panama Telegraph Company transmits reports at one-third its regular rates, and is to be commended for its liberality. There is no international arrangement with the authorities of any of these islands, which fact is greatly to be regretted, nor is there at present any return of telegraphic reports provided for or officially requested. Mr. Adolf Strauss, of Havana, has rendered much assistance in procuring these reports.

The system of telegraphing the rise and fall of water in the principal rivers, commenced during the year 1872, has been extended. In addition to the regular stations, twenty in number, upon the Mississippi River and its confluents, which furnish the river-report in addition to that of the meteoric changes, nineteen other stations have been selected on the principal western rivers and their tributaries, from which special river-reports are received by telegraph.

These stations are independent of those occupied by enlisted men of the signal-service, and the observations are limited to the rise and fall of the rivers, the state of weather, and the direction of wind at the time of report. Each station is in charge of some well-known citizen, who is compensated for making the observations regularly and correctly. The general result of the past year's experience has been satisfactory, in demonstrating both the practicability and usefulness of the work. These reports are bulletined at each of the regular stations on the principal rivers.

The observations are required to be taken daily and forwarded by telegraph at certain seasons of the year when danger from freshets may be anticipated. At other seasons the observations are taken daily and reported weekly by mail, on forms furnished by this office. In the present year daily telegraphic reports have been had from each station from the date of its establishment to July 1st. They will be resumed October 1st, and continued until the close of navigation renders them unnecessary. Paper 18 contains the instructions issued to these special stations, with the cipher in which the reports are transmitted, and Paper 19 the location of the "bench-marks" at all the river-stations, both regular and special. The advantage already gained to the river commerce through their publication has been gratefully acknowledged. It is now attempted by this office to analyze these reports as received, in connection with the reports of other phenomena, and to prepare for publication a synopsis of the rise and fall of water, stating the present condition of the rivers reported upon and that probably to follow. A continued study of this subject will, it is hoped, allow of prognostics to protect river commerce, and the districts whose safety depends upon levees, from the disasters occasioned by freshets, as well as to give warnings useful for the navigation which is affected by the stage of water. The charts prepared by Lieut. Henry Jackson, acting signal-officer and assistant, attached to Paper 18, illustrate graphically the fluctuations during the year in the following rivers, viz, the Mississippi, Missouri, Ohio, Red, and Cumberland.

The whole number of stations of observations from which this office

Digitized by Google

now receives its stated reports is ninety-two, of which seventy-eight are the regular stations in the United States, eleven belong to the Canadian system, and three to that commenced for the West Indies.

Applications have been received for the establishment of one hundred and forty-nine stations, which, with the present appropriations, cannot be supplied. Paper 25 exhibits a list of these stations.

The number of observer-sergeants on duty at this date is eighty-eight. The assistants to observers at stations number ninety-three.

Justice to the two civilian clerks provided by law for this office requires the renewal of the recommendation contained in the last annual report, that they should receive a more adequate compensation, which would be accomplished by an amendment of section 19 of the act of Congress approved March 3, 1863, changing the words "class two" to "class four." The services of these clerks are valuable. Their laborious duties can to some extent be estimated by reference to the appropriate heads in Paper 8. On examination of the classification of clerks in the several bureaus of the War Department, it is ascertained that no duties similar in character and equal in amount to those performed by the two clerks of the signal-service, are paid for at so small a rate as that provided for them ten years ago, when the work of the office was comparatively small.

The comparison and testing of meteoric instruments for the purpose of establishing standards has been continued, as also the study and experiment to provide improved apparatus for the equipment of stations. An electrical self-recording river-gauge, devised by Second Lieut. D. J. Gibbon, acting signal-officer, especially for use at river-stations, is still being tested, as is also one more recently devised by First Lieut. H. H. C. Dunwoody, acting signal-officer and assistant. The electrical self-recording attachment to the anemometer, devised by Lieutenant Gibbon, heretofore adopted by this office, has been improved by him, through the addition of electrical machinery connecting it with the wind-vane, by which the direction, as well as the velocity, of the wind is continuously given. A description of this instrument is given in Paper 7. Lieutenant Gibbon has also devised a self-recording barometer, the fluctuations of which are recorded continuously by means of electricity. This instrument has advantages in simplicity and cheapness.

The instrument-room at this office has been under the general charge of First Lieut. H. H. C. Dunwoody, acting signal-officer and assistant. Paper 20 gives a detailed report of the instruments compared and corrected for station-work, and tested for other purposes during the year.

The telegraphic service connected with the office has been, since January 1st last, under the special charge of Mr. James A. Swift, electrician, whose duties have been well performed. Seven hundred and sixty-eight thousand and sixty-six cipher words of weather-reports have been received by telegraph at, and three hundred and nineteen thousand nine hundred and ninety-two sent from, this office during the year. Three thousand seven hundred and twenty-one telegraphic messages, other than weather-reports, but connected with that work, have also been received, and three thousand four hundred and eighty-six sent. Eighty-three thousand one hundred and thirteen mailed reports have been examined and compared with telegraphic copies, and filed for future reference. The auditing of the bills of telegraph companies is also under the supervision of the electrician.

In the regular discharge of the duties of the office three telegraphic

Digitized by Google

reports are received daily, each report averaging eight hundred and sixteen cipher words. The average time of transmission from the moment the instruments are read at the several stations until the reports of those observations are received at this office, has been eighty-five minutes.

The office has still to regret that its telegraphic facilities are not as complete as the best discharge of the duties in its care would require. The hope is entertained that this source of difficulty will be removed.

The preparation of the deductions, known as the Synopses and Probabilities, from the meteoric data recorded at this office, and the editing of the regular publications, the "Weekly Weather Chronicle," "Monthly Weather Review," "Synopses, Probabilities, and Facts," have been during the year in immediate charge of Prof. Cleveland Abbe, assistant; First Lieut. Robert Craig, acting signal-officer and assistant; Prof. Thompson B. Maury, assistant; and First Lieut. H. H. C. Dunwoody, acting signal-officer and assistant. The duties have been performed by them in rotation, each having care of the preparation of the deductions for the period of one month, and for the succeeding month supervising the publications above mentioned. The services of these officers upon these and other special details assigned them have been marked by fidelity.

A regular course of study and practice is pursued by officers at this office in preparation for these duties. As a portion of this course the following writings are required to be carefully read in the order named, viz: Loomis's Treatise on Meteorology; Practical use of Meteorological Reports and Weather-Maps; Instructions to Observer-Sergeants; Smithsonian Directions for Meteorological Observations; Buchan's Handy Book of Meteorology; Piddington's Horn Book; Espy's Philosophy of Storms; Fitz Roy's Weather-Book; Martin's Rotary Theory of Storms; Ley's Laws of the Winds; Espy's First Meteorological Report; Espy's Fourth Meteorological Report. In connection with these works, and reference had to others in the library of the office, the officer is required to make studies of the daily weather-maps noting thereon the atmospheric conditions as indicated by the reports, with the variations in pressure, temperature, humidity, wind-direction, &c., and the consequent changes as exhibited from day to day. The study of text-books and publications on the subject of meteorology is not considered sufficient for purposes of the education in view, without constant comparison of the reports in their sequence, and the charting of them as received, with the advice and correction of officers experienced in the duty. The charting of weather-maps is thus practiced until the officer becomes thoroughly familiar with the process, after which the preparation of deductions from the tri-daily reports is commenced and made a continuous study. Special attention is given to the subject of cautionary signals, with reference to the direction and velocity of wind considered dangerous at the various cautionary-signal stations.

The tri-daily Synopsis and Probabilities have been issued from this office in the manner explained in previous reports with unfailing regularity at 10.30 a. m., 6.30 p. m., and 1 a. m., daily, no case of omission or serious delay having occurred during the year.

The display of bulletins and weather-charts at stations, the supply of prompt and gratuitous information to the press, and the exhibitions at designated stations of day or night signals at times of supposed special danger, have been continued. The total number of tabulated bulletins issued and distributed at the several lake, sea-coast, and river ports, and

Digitized by Google

inland cities have been one hundred and forty-three thousand and ninety-seven, excluding the special river-bulletins, which have amounted to twenty-three thousand two hundred and ten. The total number of weather-charts issued and distributed has been three hundred and twenty thousand seven hundred and seventy, and the press-reports (exclusive of the publication of the Synopses and Probabilities) have been twenty-three thousand two hundred and twenty-four.

The attention of the office has, during the past year, been frequently directed to the fact that the publication of the deductions known as Probabilities alone, as given in many of the journals, is not a sufficient exhibit of the data supplied. It ought to be understood that these deductions given alone constitute but an inferior portion of the information furnished. The plan of the office has been, from the beginning, to publish for public use, and tri-daily, four principal papers: 1st. The tabulated bulletins, exhibiting tri-daily the observations as read at each station; 2d. A chart presenting these data chartographically; 3d. A Synopsis; and 4th. A Probability. Each of these papers ought to be read with reference to the others, and if such reading is made with the use of local instruments and some knowledge of meteoric laws, it will be found that the instances are few in which important meteoric changes occur without some warning given of their approach. The tabulated bulletins are prepared for the press at most of the principal cities. The Synopsis is invariably transmitted to the several press associations, together with the Probabilities, the former condensing the facts upon which the opinions stated in the latter are based. The publication of the Probabilities alone causes the forecasts to appear as mere oracles, and not, as they are designed to be, scientific inferences or deductions from meteorological data actually recorded.

The office has continued, under the direction of the Secretary of War, its exertions to solve for the special benefit of agricultural interests the problem of giving promptly the information contained in the daily weather-reports to the many farming and other communities not now reached by telegraph, and for which the copies published by the press do not arrive in time for use. The plan adopted has been to divide the territory of the United States into districts, each district having a distributing point at or near the center, from which two printed copies of the Synopses and Probabilities are forwarded by mail to all post-offices within the districts and which can be reached by rail, steamer, or mail-coach by 4 p. m. of the same day. These reports are designed to exhibit the probable condition of the weather in the district, including not only notice of storms generally considered dangerous, but, when possible, giving indication of dry weather, light rain, extremes of temperature, and frost.

On December 7 last a request was made by the Chief Signal-Officer to the honorable the Postmaster-General, with the approval of the honorable the Secretary of War, for his favorable action upon the plan indicated, and was responded to by the Postmaster-General on December 11, with assurance of the co-operation of the Post-Office Department, and the information that he had issued an order instructing all postmasters receiving the above-mentioned reports by mail to post them immediately in the frames supplied for that purpose by this office. So soon as the necessary arrangements could be made, the plan went into operation. The following list shows the stations taken up as distributing points, the time when the special work commenced at each, and the number of post-offices supplied from it.

Digitized by Google

Station.	Commenced.	Number of offices supplied.
1. Washington	Jannary 3, 1873	146
2. New York	February 25, 1873	607
3. Cincinnati	April 7, 1873	753
4. Chicago	June 14, 1873	798
5. Detroit	July 21, 1873	337
6. Buffalo	July 25, 1873	153
7. Boston	July 15, 1873	403
8. Springfield	July 28, 1873	71
9. Memphis	August 25. 1873	59
10. New Orleans	September 15, 1873	30
11. Pittsburgh	October 1, 1873	298
12. Saint Louis	September 1, 1873	435
13. Montgomery	September 20, 1873	45
14. Nashville	September 4, 1873	96
15. Bangor	September 30, 1873	160

The correspondence on this subject is contained in Paper 21, to which is attached a chart exhibiting the distributing districts contemplated, as well as those established. The co-operation of the War and Post-Office Departments thus described now provides for the regular distribution daily of eight thousand nine hundred and eighty-two copies of the weather report to four thousand four hundred and ninety-one different post-offices, and will still be extended as rapidly as possible. The whole number of these special bulletins printed and distributed is eight hundred and ninety-five thousand and fourteen. The Synopses and Probabilities, as deduced from the midnight observations, are telegraphed at once from the central office at Washington to each of the distributing stations, and there printed in large type by the enlisted men of the signal-service, addressed to the several postmasters, and mailed according to a systematic arrangement, which takes advantage of every moment to reach each point with the greatest speed. The success already attained in the practical working of this plan, and the obvious satisfaction it has given to the public, should be a subject of gratification to the War and Post-Office Departments, as it is to this office. The thanks of the Department are due the honorable the Postmaster General for the facilities furnished, and under him to Mr. George S. Bangs, superintendent of the railway mail-service, for his personal as well as official assistance. By the different modes of publication adopted for the service, each of which has been arranged with definite purpose, and including that had through the public press, it is estimated that the information emanating from this office reaches daily one-third of the households in the United States.

For the purpose of rendering the office better acquainted with the wants of the agricultural community, many agricultural societies have, at the request of the Chief Signal-Officer, appointed permanent committees to correspond and confer with the office. One hundred and seventeen of these organizations are now in correspondence, (Paper 22,) and notice has been given by others that committees will soon be appointed by them. A list of similar committees appointed by the boards of trade and chambers of commerce, forty-four in number, is in Paper 23.

It has been a duty of the office to publish the information obtained by it in the form of collated statistics. The Weekly Weather Chronicle, which was briefly alluded to in the last annual report as commenced, has been enlarged and improved. Each copy exhibits a general summary of the meteoric changes over the whole region from which reports are received, during the seven days previous to the day of publication,

Digitized by Google

as well as for each separate day. A special reference is made to the river-reports. (Paper 24).

During the year nine thousand four hundred and two copies have been gratuitously distributed to committees of agricultural societies and boards of trade, to scientific persons in this country and abroad, and to the press.

The Monthly Weather Review, the publication of which was commenced in January last, reviews the facts for each month concerning storms, winds, rain-fall, air, river, and ocean temperatures, and the rise and fall of rivers. It is accompanied with charts showing the tracks of low barometric pressure, the isobars, isotherms, and prevailing winds for the month. The number of copies of this publication issued during the year has been six thousand seven hundred and ninety-six. Paper 25 includes the reviews issued since the date of the last annual report.

The Daily Bulletin has been prepared as a monthly publication for each month, from and including September, 1872. Each volume exhibits the several reports from synchronous observations at the various stations at the regular hours, viz, 7.35 a. m., 4.35 p. m., and 11 p. m., Washington mean time, with the weather-chart on a reduced scale for each observation in immediate connection not only with the Synopsis and Probabilities issued for each observation, but the "Facts" succeeding the latter being collated in detail from the reports of the observers made at the next regular observation following the issue of each Probabilities. This publication exhibits the data upon which this office has been compelled to act in making its tri-daily announcements, and presents for general use the information gathered. This work is not only a contribution of data valuable to meteoric science, but aims to show impartially and in detail the successes and failures of the office.

The publications of the office thus referred to amount in the course of the year to many volumes. The scope of an annual report permits this brief reference to them only.

At the request of Prof. Spencer F. Baird, United States commissioner of fish and fisheries, the work of the observers at the stations favorably located for the purpose has been increased, by requiring observations to be taken daily of the water temperatures in the different rivers and harbors. The reports of these observations are made on a special form, (Paper 24.) These reports have not yet been continued sufficiently long to permit of safe deductions, but promise to have useful results in the solution of problems beyond the important objects of pisciculture throughout the United States for which they were at first instituted.

An additional duty was imposed upon the Secretary of War by the provision of the act of Congress approved March 3, 1873, entitled—

An act making appropriations for sundry civil expenses of the Government for the fiscal year ending June thirtieth, eighteen hundred and seventy-four, and for other purposes, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the following sums be, and the same are hereby, appropriated for the objects hereinafter expressed, for the fiscal year ending June thirtieth, eighteen hundred and seventy-four, namely:

* * * * * * * * *

For contingencies of life-saving stations on the coast of the United States, fifteen thousand dollars. And that the Secretary of War be and hereby is authorized to establish signal-stations at light-houses, at such of the life-saving stations on the lake or sea coasts as may be suitably located for that purpose, and to connect the same with such points as may be necessary for the proper discharge of the signal-service by means of a suitable telegraph line in cases where no lines are in operation, to be constructed, maintained, and worked under the direction of the Chief Signal-Officer of the Army, or

Digitized by Google

the Secretary of War and the Secretary of the Treasury; and the use of the life-saving stations as signal-stations shall be subject to such regulations as may be agreed upon by said officials; and the sum of thirty thousand dollars is hereby appropriated to carry into effect this provision.

In discharge of this duty a telegraph line has been completed ten miles in length, from Seaville to Peck's Beach, N. J., connecting at Seaville with the line of Western Union Telegraph Company. The material is ready, and the work is in progress on the construction of a line from Sandy Hook to Barnegat Inlet, N. J., a distance of fifty miles, connecting with the Western Union line at Long Branch. These connections will allow of signals being displayed at the life-saving stations established at Sandy Hook, Long Branch, Barnegat, Atlantic City, Peck's Beach, and Cape May. The plan in contemplation proposes the establishment of signal-stations at life-saving stations and light-houses along the ocean-coast of New Jersey, from Sandy Hook to Cape May, at distances of twenty-five miles from each other. A line is in process of erection from the village of Rockport, Mass., to Thatcher's Island light-house, a distance of three miles and a half, of which one mile and a half will be cable.

A line connecting the stations at life-saving stations and light-houses along the coast from Norfolk, Va., to Cape Hatteras, N. C., a distance of one hundred and thirty-seven miles, and on one of the most dangerous coasts of the United States, is in construction. It is expected that the above-mentioned lines will be completed during the present year. Attention is invited to the fact that the whole work now done in the erection of these lines, and to be done hereafter in operating them, has been done and is to be done by the officers and men of the signal-service of the Army. By no other agency could so large an amount of line so situated be constructed with the small appropriation provided.

It is not necessary to dwell upon the benefits to result from the work of the stations thus provided for. Not only will the meteoric information regularly received be greatly increased in amount and value by that taken on the sea coast and at the actual sea-level; but storm-warnings visible at a sufficient distance from shore to allow often of the proper means to be taken for safety, can be given to vessels approaching dangerous coasts, while on the occurrence of inevitable disaster assistance can be summoned at once from the neighboring life-saving stations, and information regarding the occurrence be transmitted to underwriters and others interested. Communication can readily be held by signal and telegraph with vessels of the naval and merchant marine from Washington and from other cities, and the coast will be provided with a vidette system, invaluable in time of possible war. The expense of securing these advantages to the country is comparatively trifling, the observer-sergeant of the signal-service at each station being charged with the telegraphic operations, and the necessary lines being constructed, maintained, and worked under the direction of the Chief Signal-Officer by enlisted men of the signal-service. It is to be hoped that Congress will, by future appropriation, allow the extension of this special work to the lake and sea coasts, where the life-saving and light-house systems are deemed necessary, affording thus coast-service unparalleled in the world. The thanks of the Chief Signal-Officer are due to Mr. S. I. Kimball, the chief of the Revenue-Marine Bureau, who has tendered rooms in each of the selected station-houses of the life-saving service for the observer-sergeant of the signal-service, and has provided, by the erection of a flag-staff on the new buildings, for the proper display of signals.

At the request of Hon. Francis A. Walker, Superintendent of the United States Census, for the contribution by this office of charts to form part of the statistical atlas of the United States, the compilation of which is, by law, in his charge, such are now in course of preparation, showing, for the year 1872–'73, the following meteorological details, viz: The isobarometric lines; the number of times each direction of wind is recorded; the average hourly velocity of each wind; the maximum recorded velocity of each wind; the total annual movement of the wind; the distribution of storms or storm frequency.

While responding, when possible, to all requests made for statistical and other information, the thanks of the Chief Signal-Officer must be rendered to many scientists, in this country and abroad, for their valuable assistance. Especial acknowledgment is to be made to Prof. John Tyndall, of the Royal Institution, London; Sir William Thomson, professor of natural philosophy in the University of Glasgow; Dr. Fred. Patterson, of San Antonio, Tex.; Rev. James Rankin, D. D., president of Hobart College, Geneva, N. Y.; and Mr. M. F. Stevenson, Gainesville, Fla., have contributed regular or occasional reports of value. The agent of the Pacific Mail Steamship Company at New York has forwarded a large number of marine records on forms furnished by this office, and since July, 1872, regular monthly meteoric reports have been received from the commanding officer of the United States receiving-ship Vermont, stationed at the Brooklyn navy-yard. Capt. J. Sangster, of the bark Express, of Annapolis, Nova Scotia, has presented a log-book showing records of voyages from June, 1872, to February, 1873, and one hundred and thirty-eight logs of vessels have been collected by the observer-sergeants stationed along the Atlantic and Pacific coasts; in procuring which the sergeants at Wilmington, N. C., and San Francisco, Cal., have been most active. It is much to be regretted that so few of the forms prepared for the purpose of being filled up with reports or observations made at sea, and widely distributed, have yet been returned to this office. The accurate reports of storms on the oceans, whether passing from or advancing upon the coasts of the United States, are of much importance for study, even when not in time for immediate deductions.

An interesting contribution to meteoric knowledge, prepared by Prof. C. Abbe, assistant, from the records of the office, will be found in Paper 32, showing a chronological list of the auroras observed at the respective signal-service stations from November 11, 1870, to July 31, 1873, inclusive.

On June 12, 1871, Observer-Sergeant Frederick Meyer, Signal-Service, United States Army, was, at the special request (approved by the Secretaries of War and of the Navy) of Capt. C. F. Hall, commander of the north polar expedition, authorized by Congress, ordered to report to him for duty in connection with that expedition with a complete set of meteorological instruments and signal equipments furnished by this office. The orders and instructions of Sergeant Meyer, and a report prepared by him since his return, are included in Paper 27.

The following table, prepared by First Lieut. Robert Craig, acting signal-officer and assistant, gives the lowest observed readings of the low barometers, with number of areas traced for each month, from October 1, 1872, to September 30, 1873, inclusive:

Oct.,	1872, eight areas of low barometer, varying from	29.35 to 29.85.
Nov.,	1872, nine areas of low barometer, varying from	29.08 to 29.74.
Dec.,	1872, twelve areas of low barometer, varying from	29.17 to 29.93.
Jan.,	1873, ten areas of low barometer, varying from	29.07 to 29.66.

Digitized by Google

Feb., 1873, nine areas of low barometer, varying from ..... 29.04 to 29.49.
March, 1873, eleven areas of low barometer, varying from ..... 28.80 to 29.52.
April, 1873, ten areas of low barometer, varying from ..... 29.27 to 29.62.
May, 1873, nine areas of low barometer, varying from ..... 29.28 to 29.63.
June, 1873, ten areas of low barometer, varying from ..... 29.26 to 29.95.
July, 1873, thirteen areas of low barometer, varying from ..... 29.44 to 29.68.
Aug., 1873, twelve areas of low barometer, varying from ..... 29.49 to 29.79.
Sept., 1873, eleven areas of low barometer, varying from ..... 29.21 to 29.76.

The charts appropriate to these areas will be found among thos attached to Paper 25.

As the severe storms of the 14th August, in New Jersey, and the 24th and 25th of the same month, in Nova Scotia, were, from the want of stations at requisite points, and also from temporary failure of the telegraph, not fully presented for study in the regular tri-daily maps of this office, and yet possessed features worthy of special attention, Professor Abbe, assistant, was directed to collate in reference to it such information as could be obtained from the logs of vessels and similar sources. The detailed results of his work are given in Paper 28.

Both of these storms had their origin and much of their course beyond the limits of the United States, and beyond the scope of the observations taken at the regularly-established stations. The presence of similar cyclones passing near the coasts of the United States, and which are likely to be encountered by vessels sailing from the sea-coast ports, will, it is hoped, be recognizable by the observations to be taken at the series of stations now in process of establishment at the life-saving stations along the coasts. The telegraphic communication to be established with the Bermuda Islands will be of utility in this connection.

A valuable report by Prof. I. A. Lapham upon disasters to shipping upon the great American lakes, from the 1st of January to the 1st of September, 1873, is hereto annexed, as Paper 29.

On May 26, last, Observer-Sergeant James Mackintosh, Signal-Service, United States Army, was ordered to proceed to the district traversed by the violent tornado which passed through Iowa and Illinois on May 22, and to make a full report of its origin, path, and attendant phenomena. (Paper 30.)

The storm of April 14–18 presented features of peculiar interest. A description of the storm, with charts of its course as traced, prepared by Observer-Sergeant Theodore Smith, Signal-Service, United States Army, is herewith, (Paper 31.)

The stations on the sea and lake coasts, especially designated as cautionary-signal stations, at which the display of signals is ordered for the benefit of commerce, are the following, thirty in number, viz: New Orleans, Mobile, Jacksonville, Savannah, Charleston, Wilmington, N. C., Norfolk, Cape May, Baltimore, New York, New Haven, New London, Wood's Hole, Boston, Portland, Me., Eastport, Oswego, Rochester, Buffalo, Erie, Cleveland, Toledo, Detroit, Alpena, Grand Haven, Chicago, Milwaukee, Escanaba, Marquette, and Du Luth.

During the year orders have been issued for the display of the cautionary signals, described in previous reports, in anticipation of eighty-eight probable storms. In seventy cases the storms anticipated manifested their effects at one or more of the stations at which the signals were ordered; the signals thus giving warning to shipping and other interests which would otherwise, perhaps, have been dangerously exposed.

The order for each cautionary signal is special, and issued under the following rules: The display is ordered at a signal-station whenever the officer in charge of that duty considers it probable that there will be experienced within twelve hours at that station, or within one hundred

Digitized by Google

miles thereof, and on any navigable stream, a wind dangerous to navigation. Dangerous winds on the navigable waters are, for the order in question, considered to be those reaching a velocity of twenty-five miles per hour, as registered by the anemometer on the land, provided that the temperature be decidedly above freezing. For temperature decidedly below freezing, and for foggy weather, winds are to be considered dangerous when the velocities are registered so low as twenty miles. The direction of the wind is not taken into consideration for the present. If at the tri-daily report next following the ordering of the signals it appears that the danger is not so imminent as was apprehended, the signal is to be ordered down. It is not to be displayed for an indefinitely long time. The immediate area referred to by the respective cautionary signals is as defined on the map of cautionary-signal stations at the office of the Chief Signal-Officer, which may be generally described as a circle, with a radius of one hundred miles, the station being the center. When any warning is given for points upon the lakes, the other lake-stations are notified of the warning. Each station is also notified when the signals are ordered down at any other station.

As in preceding years, where there has been error of display it has been on the side of caution. While on occasions the signals ordered may have proved unnecessary, and are so reported unverified, on the other hand no extensive storm has occurred in the regions included in the system of cautionary signals without warnings of its approach having been displayed in at least part of its course. While neither the indications upon which signals are certainly to be displayed, nor modes of verifying the display, have been as yet accurately arrived at, the public confidence exhibited in the heed given to the warnings when they are shown has evidenced their general utility.

Pursuant to the arrangements with Prof. G. T. Kingston, of Toronto, chief of the Dominion Meteorological Bureau, to which reference was made in the last annual report, forty dispatches, giving warning of approaching storms, have been sent to the Bureau under his charge.

The geographical divisions and subdivisions of the United States in reference to which meteoric phenomena are considered, and which are referred to in the preparation of Synopses and Probabilities, are as follows:

DIVISIONS.

1. Pacific States.
2. Extreme Northwest.
3. Northwest.
4. Southwest.
5. Southern States.
6. Lake Region.
7. Middle States.
8. New England States.
9. Saint Lawrence Valley.

SUBDIVISIONS.

1. Missouri Valley.
2. Upper Mississippi Valley.
3. Lower Mississippi Valley.
4. Ohio Valley.
5. Western Gulf.
6. Eastern Gulf.
7. Upper Lakes.
8. Lower Lakes.
9. South Atlantic.
10. Middle Atlantic.

A chart illustrating the territorial limits of each of these divisions and subdivisions is hereto attached. (Paper 32.)

Digitized by Google

The percentage of verification for each geographical division or subdivision named has been for the year as follows:

New England	81.50	Ohio Valley	76.42
Middle States	81.17	Western Gulf	74.40
South Atlantic	79.92	Upper Lakes	75.25
Lower Lakes	78.90	Northwest	74.00
Eastern Gulf	77.16		

These percentages have been obtained by a careful analysis of the deductions as announced each day for each geographical division or subdivision mentioned, and the comparison of them with the facts subsequently obtained from the weather-reports for that date. A numerical value is given each item, as temperature, pressure, wind-direction, &c., mentioned in each deduction and verified; the sum of these values divided by the number of deductions exhibiting the average of verification for any period with approximate accuracy.

The aggregate percentage of verification ranges higher in New England, the Middle States, the South Atlantic, and the Lower Lake Region, than in the West, Southwest, and Northwest.

With a more rigid and scrutinizing mode of calculation than was before adopted, the percentages have improved upon those of the preceding year; the analysis of the year's work indicating at once the wisdom of increasing the number of stations and the regions in which they should be established. The percentage of verifications for each district exhibits a proportion to the number of stations from which reports having reference to the atmospheric conditions in the district under consideration have been received. It is thus to a certain extent mathematically demonstrated that the rules applied for the deductions of the forecasts are practically correct, and that with increasing facilities the percentage of verifications can be annually increased. It is not known that a demonstration of this character has been before attained.

In pursuance of invitations issued by the Austrian government, a congress of persons charged with meteoric duties was convened in Vienna in the month of September last, at which the Chief Signal-Officer was present under instructions from the Secretary of War. The proceedings of this congress cannot fail to be of importance as tending to establish a uniformity in methods of conference and of action. The opportunities it afforded of personal meeting and observation among the representatives from different countries must be productive of beneficial effects. The concurrence of the congress by a unanimous vote in a proposition to the effect that it is desirable, with a view to their exchange, that at least one uniform observation of such character as to be suitable for the preparation of synoptic charts should be taken and recorded daily and simultaneously at as many stations as practicable throughout the world, is regarded as of especial importance in reference to duties of the character of those now undertaken by the United States.

With the study of synoptic charts, the field of which may, with proper co-operation, on land and at sea, be made almost world-wide, there is reason to anticipate the discovery of facts relating to atmospheric phenomena and to the origin and movement of storms not hitherto recognized. It is to such co-operation effort will be directed. It is gratifying to state, in this connection, that arrangements have already been made with the meteorological offices at St. Petersburg, London, and Constantinople to commence the exchange by mail on January 1, 1874, of one daily simultaneous report taken over the vast territorial extent of the Russian and Turkish Empires, the British Islands, and the United States. (Paper 33.) The co-operation of the systems of other nations, of scientific associations, societies, and individuals is sought for and ex-

Digitized by Google

pected. With a work in view, not for the sole benefit of any country or people, but reaching to the good of all, there is ground to hope a world's assistance.

In the review of the year's duties there is found encouragement for the future. While the office has had to encounter many difficulties, the details of which would be out of place in this report, there has been the assurance that its labors have not been without a value generally recognized. The office acknowledges, as in preceding years, the general support of the popular opinion, of scientific men, of the press, and of the War Department. Without this aid the work achieved would have been impossible. Whenever errors have occurred, it has been recognized as inevitable that some must occur in the present condition of science. Success has been generously commended. The evidences of interest and progress in similar duties are extending in all countries. Their utility is no longer questioned, and effort at home and abroad turns only toward their development. The field becomes world-wide with the promise of results a few years ago hardly to be hoped for. There will be needed time and labor; there must often be disappointment; but the public good to follow is certain.

I am, sir, very respectfully, your obedient servant,

ALBERT J. MYER,

Brig. Gen., (Bvt. Ass'g'd,) Chief Signal-Officer, U. S. A.

PAPER 1.

RECORD OF SIGNAL-CAMP OF INSTRUCTION, FORT WHIPPLE, VA.

Officers instructed during the year ending September 30, 1873.

Name.	Rank and corps.	Reported for instruction.	Relieved from instruction.	Remarks.
David J. Gibbon ...	Second lieutenant Ninth Cavalry.	Sept. 4, 1872	Dec. 20, 1872	Completed full course in signaling, telegraphy, and meteorology.
Eugene O. Fechét..	Second lieutenant Second Artillery.	Dec. 4, 1872	Dec. 26, 1872	Relieved before completing full course of instruction.
W. B. Weir	Second lieutenant Fifth Artillery.	June 16, 1873	.....	Still under instruction.
F. C. Grugan	First lieutenant Second Cavalry.	Sept. 27, 1873	.....	Do.
George S. Grimes ..	First lieutenant Second Artillery.	Sept. 4, 1873	.....	Reviewing course.
C. C. Wolcott	First lieutenant Third Artillery.	Sept. 4, 1873	.....	Do.

PAPER 2.

Amount of field-practice had by each officer.

Name.	Rank and corps.	Number of days flag-practice was had.	Number of nights torch-practice was had.	Remarks.
David J. Gibbon ...	Second lieutenant Ninth Cavalry .	14	6	
Eugene O. Fechét..	Second lieutenant Second Artillery.	.....	.....	Study of Manual of Signals, Wand Practice, &c., for twelve days.
W. B. Weir	Second lieutenant Fifth Artillery .	16	7	Still under instruction.
F. C. Grugan	First lieutenant Second Cavalry ..	.....	.....	Do.
George S. Grimes ..	First lieutenant Second Artillery	.....	.....	Reviewing course.
C. C. Wolcott	First lieutenant Third Artillery...	.....	.....	Do.

PAPER 3.

Table showing the instruction of candidates for the grade of observer-sergeant from October 1, 1872, to September 30, 1873.

Name.	Instruction commenced.	Date of examination and promotion.	Remarks.
Richard Williams		Oct. 1, 1872	In charge of station at La Crosse, Wis. Reduced August 12, 1872; re-appointed sergeant October 1, 1872.
David W. Harnett	Sept. 19, 1872	Oct. 19, 1872	Reduced to the ranks for misconduct; deserted, and now in confinement at Fort Whipple, Va.
James H. Marah	Aug. 26, 1872	do	In charge of station at Keokuk, Iowa.
P. Filbert Nagle	Sept. 1, 1872	Nov. 1, 1872	On duty at office of the Chief Signal-Officer.
Charles H. Sprenger	do	do	On duty at Fort Whipple, Va.
Michael F. Tighe	Mar. —, 1872	do	On duty at New York City.
Timothy O'Neil	Sept. 23, 1872	Nov. 15, 1872	In charge of station at New London, Conn.
William Black	Sept. 30, 1872	do	In charge of station at New Haven, Conn.
James K. P. Purdum	Oct. 2, 1872	do	In charge of station at Wood's Hole, Mass.
Fred. M. Clarke		Dec. 11, 1872	Discharged the service September 26, 1873.
James H. Garrard		do	Reduced March 12, 1872; re-appointed December 11, 1872; reduced September 1, 1873. On duty at Fort Whipple, Va.
Joseph E. Cook	Nov. 1, 1872	Dec. 16, 1872	In charge of station at Toledo, Ohio.
Sydney Powell	do	do	In charge of station at Pembina, Dak.
Fred. Z. Gosewisch	Oct. 31, 1872	do	In charge of station at Wytheville, Va.
Henry U. Jones	Nov. 8, 1872	Dec. 28, 1872	In charge of station at Lynchburgh, Va.
William H. Colesberry	Nov. 16, 1872	do	In charge of station at Buffalo, N. Y.
Edward W. McGann	do	do	In charge of station at Norfolk, Va.
Richard McLaughlin	Nov. 18, 1872	do	In charge of station at Jacksonville, Fla.
Edward A Lewis	Dec. 4, 1872	Feb. 7, 1873	On duty at Fort Whipple, Va.
William Finn	Dec. 15, 1872	do	In charge of station at Detroit, Mich.
William C. W. Shreck	Dec. 27, 1872	do	In charge of station at Eastport, Me.
Samuel P. Ruthven	Dec. 7, 1872	do	In charge of station at Davenport, Iowa.
Otto Schütze	Dec. 26, 1872	Feb. 8, 1873	In charge of station at Wilmington, N. C.
Leroy E. Sebree	Dec. 8, 1872	do	On duty at office of the Chief Signal-Officer.
Will Stromberger	Jan. 11, 1873	Mar. 8, 1873	In charge of station at Cleveland, Ohio.
Newton Phelps	do	do	In charge of station at Yankton, Dak.
Edwin F. McComas	Jan. 14, 1873	do	In charge of station at Erie, Pa.
Thomas A. Taylor	Jan. 3, 1873	do	In charge of station at Fort Gibson, Ind. T.
Edward B. Robbins	Jan. 18, 1873	Mar. 11, 1873	On duty at office of the Chief Signal-Officer.
Herman M. Ludwig	Jan. 22, 1873	do	In charge of station at Milwaukee, Wis.
Wyllys A. Chapman	Jan. 18, 1873	do	Awaiting orders at Fort Whipple, Va.
Powell G. Deitz	Feb. 9, 1873	Apr. 8, 1873	In charge of station at Boston, Mass.
John D. M. Fee	Feb. 12, 1873	do	In charge of station at Morgantown, W. Va.

PAPER 5.

WAR DEPARTMENT, OFFICE OF THE CHIEF SIGNAL-OFFICER,
Washington, D. C., June 7, 1873.

[Circular No. 17.]

This circular is published for the information of those desiring to enter the signal-service, United States Army, with reference to its field duties, including field-signals and electric telegraph, as distinguished from the full duties of that service, which include the observation and report of storms and display of cautionary signals, &c.

Digitized by Google

1. Entrance into this service in all cases is by enlistment as a private soldier in the Regular Army of the United States, the pay, quarters, allowances, and duties being, in the first instance, and unless changed after instruction, detail, or promotion, those of a private soldier in the signal-service, United States Army. All men enlisted are drilled in the use of arms and disciplined in the duties of soldiers. The term of service is five years, unless sooner discharged. The Secretary of War has power to grant discharges, which this office is authorized to promise when applied for on proper grounds and at times when no special injury to the service would result therefrom; but as a rule no application for discharge will be favorably entertained until after two years of faithful service, and not then, except as above specified. With the single exception that men enlisting for the signal-service will not be transferred to any other branch of the Army, no promise will be given which can alter or affect the usual terms of enlistment. The service, while strictly military, is also probationary, with opportunities for advancement, depending mainly on the good conduct and capacity of each individual.

Married men and those under twenty-one or over forty years of age are not enlisted. The standard height is five feet four inches and upward.

2. Applicants can present themselves in person to the officer in charge at Fort Whipple, Va., near Washington, D. C., or to the observer-sergeants of the signal-service at the following points, viz: New York, Philadelphia, Baltimore, Cincinnati, Saint Louis, Boston, Buffalo, Chicago, Cleveland, Detroit, Indianapolis, and Louisville, which sergeants are ordered to present proper applicants to the recruiting officers of the United States Army in those cities. *No promise or statement different from this circular, made by any one, is authorized, or will be allowed to affect the terms of enlistment of any recruit.* Recruits enlisted at Fort Whipple, or at the above-mentioned cities, are placed on duty in the first instance at Fort Whipple or at such other stations where their services may be made available. They will not be precluded from eventual advancement to the full duties of the signal-service, and promotion, in case they prove fit and worthy, but will not be considered as included, upon their enlistment, in the regulations made for those recruits who may have been enlisted with special reference to the full duties above referred to. They may, however, be subject to detail on any of the duties of the signal-service in the discretion of higher authority.

3. The pay and allowances of either a sergeant or private vary according to the character and place of the duties and the length of the service of each individual. The following table exhibits the average amount per month for five years, according to the present law:

Rank.	When at Fort Whipple, Va., or at a military post.	When on station.	When at this office.
Sergeants	$31 87	$74 68	$92 49
Privates	17 18	57 99	88 45

Of the above amounts $1 per month in the third year, $2 per month in the fourth year, and $3 per month in the fifth year, are retained, and will not be paid until final discharge after faithful service. An allowance for clothing, averaging $3.02 per month for sergeants and $2.98 for privates, is also included in the above, which, if clothing is not drawn in kind, is also retained until discharged. When at Fort Whipple, both sergeants and privates receive quarters and rations, and at all places are, when ill, provided with medical attendance and medicines.

4. Applications being frequently made for enlistment in this service, conditioned upon the applicant being placed upon some specified duty or stationed at a particular place, it is to be clearly understood that no such qualification of the contract of enlistment will be allowed or considered, the wants of the service, which cannot be known in advance, regulating all details of duty.

By order of the Chief Signal-Officer of the Army:

GARRICK MALLERY,

Captain and Brevet Lieut.-Col. U. S. A., Acting Signal-Officer and Assistant.

PAPER 6.

WAR DEPARTMENT, OFFICE OF THE CHIEF SIGNAL-OFFICER,
Washington, D. C., July 1, 1873.

[Circular No. 18.]

This circular is published for the information of those desiring to enter the service of the United States with reference to the full duties of the signal-service, including

not only field-signals and telegraphy, but also the observation and report of storms, by telegraph and signal, and display of cautionary signals, for the benefit of commerce and agriculture, under the joint resolution of Congress approved February 9, 1870, the acts of Congress approved June 10, 1872, and March 3, 1873, and the authorization of the Secretary of War, and for such other duties as may be required in connection therewith.

1. Entrance into this service in every case is by enlistment as a private soldier in the Regular Army of the United States, the pay, quarters, allowances, and duties being, in the first instance, and unless changed after instruction, detail, or promotion, as hereinafter explained, those of a private soldier in the signal-service, United States Army. All men enlisted are drilled in the use of arms and disciplined in the duties of soldiers. The term of service is five years, unless sooner discharged. The Secretary of War has power to grant discharges, which this office is authorized to promise when applied for on proper grounds, and at times when no special injury to the service would result therefrom; but as a rule no application for discharge will be favorably entertained until after two years of faithful service, and not then, except as above specified. With the single exception that men enlisting for the signal-service will not be transferred to any other branch of the Army, no promise will be given which can alter or affect the usual terms of enlistment. The service, while strictly military, is also probationary, with opportunities for advancement, depending mainly on the good conduct and capacity of each individual, and it is intended to place competent men, who enlist with a view to promotion to the position of observer-sergeant, on duty where instruction can be obtained and opportunity for study afforded.

The Chief Signal-Officer, in his annual report for 1871 to the Secretary of War, recommended that a commission in the Army be given each year to the sergeant who shall in that year be reported as most distinguished for fidelity and ability, and in each of the years 1872 and 1873 an enlisted man of the signal-service was promoted to be a commissioned officer.

Married men and those under twenty-one or over forty years of age are not enlisted. The standard height is five feet four inches and upward.

2. Enlistments at this office are confined to candidates who have passed an examination prior to enlistment, before a board appointed by the Chief Signal-Officer, which meets at this office every Thursday at noon, and before which they must appear at their own expense. Testimonials as to good character and capacity, signed by persons known at this office, must be presented, together with an application in the handwriting of the candidate, (addressed to the Chief Signal-Officer of the Army,) stating his age, past and present avocation, and residence. The examination will be chiefly directed to accurate spelling, legible handwriting, proficiency in arithmetic, with special attention to decimal fractions, and the geography of the United States. After a favorable report from the above-mentioned board, and also a physical examination by the surgeon, the candidate will be enlisted, assigned to the signal-service, and unless detailed for some special duty connected with this office, will be ordered to Fort Whipple, Va., near this city, where the signal-service detachment and school of instruction is stationed, and will be placed at once under instruction to prepare for the duty of assistant to an observer on station; also performing the general duties of soldiers at hours when not required for instruction. When reported by the instructor as qualified, the enlisted man will, as the wants of the service require, be detailed on the above-mentioned duty of assistant. The length of time between being ordered under instruction and being detailed as assistant varies with the capacity and conduct of the individual, but has averaged about six weeks.

3. Men who do not present themselves at this office for the above-mentioned examination can apply in person to the officer in charge at Fort Whipple, Va., or to the observer-sergeants of the signal-service at the following points, viz: New York, Philadelphia, Baltimore, Cincinnati, Saint Louis, Boston, Buffalo, Chicago, Cleveland, Detroit, Indianapolis, and Louisville, which sergeants are ordered to present proper applicants to the recruiting officers of the United States Army in those cities. *No promise or statement different from this circular, made by any one, is authorized, or will be allowed to affect the terms of enlistment of any recruit.* Recruits enlisted at Fort Whipple, or at the above-mentioned cities, are placed on duty, in the first instance, at Fort Whipple, as private soldiers of the signal-service detachment for at least two months, after which they have the privilege, their conduct being good, to be examined, on their application, by the same board above alluded to, the examination being identical with that required of the civilian candidates prior to enlistment, and on passing that examination they are ordered under instruction under the same circumstances as above explained in paragraph 2. The distinction is, that being enlisted in the above cities before examination by the board, they are transported to Fort Whipple at the expense of the United States, also receiving rations *en route* or commutation therefor, instead of presenting themselves at this office at their own expense; and also that they take the risk, if they should fail to pass the required examination, of remaining on the usual duty of soldiers of the signal-service detachment,

Digitized by Google

instead of being detailed as assistant to an observer, or on other duty requiring the amount of education exhibited by those passing the examination.

4. All soldiers of the signal-service, wherever enlisted, who have passed the above-described examination, and have been instructed and detailed on duty as assistant to an observer on station, or similar duty at this office, are required to perform such duties satisfactorily for six months before promotion from private to sergeant. As a rule, such men may, after the expiration of that time, be ordered to Fort Whipple as candidates for promotion, and after additional instruction, drill, and discipline in the duties of soldiers, are examined by a board of final examination, also appointed by the Chief Signal-Officer, and meeting at this office, but differing from the board of preliminary examination before mentioned, both in its members and the character of examination, the latter being exclusively on the course of study and practice in reference to the special duties of the service with which the candidate has had the opportunity to become familiar after his enlistment. They will also be examined by a board of officers, convened at Fort Whipple, as to their proficiency in the military duties of a sergeant. On passing these examinations the candidate will, as vacancies occur, be promoted to be sergeant, signal-service, United States Army.

5. The duties of an observer-sergeant on station, as also those of an assistant to an observer, will be chiefly those pertaining to the observation, record, and proper publication and report, at such times as may be required, of the state of the barometer, thermometer, hygrometer, rain-gauge, and other instruments, (instruction in the use of which will be given under the direction of this office,) and the report by telegraph or signal, at such times as indicated and to such places as may be designated by the Chief Signal-Officer, of the observations as made, or such other information as may be required—the telegraphic reports to be forwarded by the regular telegraphic operators, or in such manner as may be directed. The utmost precision will be required in observations and reports. The specification of these particular duties is not to exclude such others connected therewith as may be necessary.

The object of this plan is to insure the correctness and regularity of reports by having them made under military control. It being desired to make this body of men especially select, rigid examinations will be insisted upon.

All the duties will be performed strictly under the discipline of military law, all persons in the military service being subject to trial and punishment for improper conduct or neglect of duty under the Rules and Articles of War. The penalties for neglect of duty, bad conduct, &c., are dishonorable discharge, or such other punishment as a court-martial may direct, or as may be provided for by the customs of the service.

The United States is entitled to the whole time of the person enlisted; but the duties required on station are of such a nature that, with care and diligence, some time between the hours of reports, when no active duty is pressing, will generally be at the disposal of the observer, which may be devoted to reading or study. Most of those already enlisted have had such purposes in view. No employment of this nature can, however, be permitted to interfere, in any way, with that prompt and constant attention to duty which will be insisted upon.

6. The pay and allowances of both sergeant and private vary according to the character and place of the duties and the length of the service of each individual. The following table exhibits the average per month for five years, according to the present law:

Rank.	When at Fort Whipple, Va., or at a military post.	When on station.	When at this office.
Sergeants	$34 44	$77 25	$95 06
Privates	19 62	60 43	90 89

Of the above amounts $1 per month in the third year, $2 per month in the fourth year, and $3 per month in the fifth year are retained, and will not be paid until final discharge after faithful service. An allowance for clothing, averaging $5.59 per month for sergeants and $5.42 for privates, is also included in the above, which, if clothing is not drawn in kind, is also retained until discharge. When at Fort Whipple, both sergeants and privates receive quarters and rations, and at all places are, when ill, provided with medical attendance and medicines.

7. Applications being frequently made for enlistment in this service, conditioned upon the applicant being placed upon some specified duty or stationed at a particular place, it is to be clearly understood that no such qualification of the contract of enlistment will be allowed or considered, the wants of the service, which cannot be known in advance, regulating all details of duty.

By order of the Chief Signal-Officer of the Army.

GARRICK MALLERY,

Captain First Infantry, Bvt. Lt. Col., U. S. A., Acting Signal-Officer and Assistant.

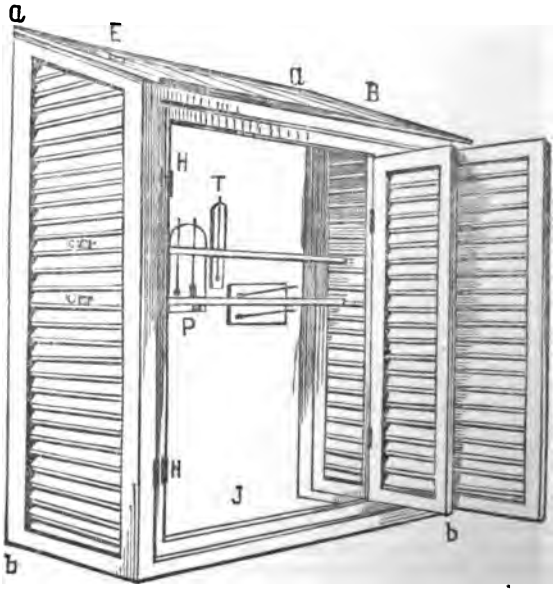
PAPER 7.

INSTRUCTIONS TO OBSERVER-SERGEANTS, SIGNAL SERVICE, U. S. A., ON DUTY AT STATIONS.

[General Orders No. 32.]

WAR DEPARTMENT, OFFICE OF THE CHIEF SIGNAL-OFFICER,
Washington, D. C., September 30, 1873.

1. Observer-sergeants, signal service United States Army, on duty at stations, will strictly comply with the following instructions, (in place of those heretofore issued to them from this office,) which will also be used as a text-book in all instruction given to enlisted men at Fort Whipple, Va., or on station.



* * * * * * *

By order of the Chief Signal-Officer of the Army.

GARRICK MALLERY,
Captain First Infantry, Bvt. Lt. Col., U. S. A., Acting Signal-Officer and Assistant.

INSTRUCTIONS.

1. Each observer, upon arriving at his station, will immediately proceed to secure a room suitable for office purposes and the storage of instruments and other United States property in his charge. This room must be in the immediate vicinity of the telegraph-office charged with the transmission and receipt of the weather reports, and should be in the upper story of a building and contain at least one window facing the north. In all cases he will endeavor to get permission to occupy the roof of this building for the necessary exposure of his instruments, and, at stations specially designated by the Chief Signal-Officer, for the erection of an instrument-room, in accordance with plans furnished by this office. A lease of this room for a period of one year, with the privilege of renewal on the part of this office, in accordance with the regular forms to be furnished the observer on application to the property and disbursing officer, will be made out and properly signed before any expense is incurred in fitting up the room or putting up instruments. When such permission cannot be obtained, or a suitable roof found, and at all stations not designated as above, an instrument-shelter will be constructed substantially as follows:

Select a window fronting the north; remove the lattice-blinds, if there be any, and along the exterior jambs of the window place perpendicularly two pieces of lattice-work, (a a,) projecting to a distance of from 20 to 24 inches from the panes. At half

Digitized by Google

this distance, 10 or 12 inches from the panes, and at the height of the eye of the observer, when in the chamber, pass from one end of the shelter to the other two small wooden transverse bars, (c c,) each an inch broad, for the purpose of supporting the instruments. Upon the outer edge of the sides fasten, in the usual way, (b b,) the latticed blinds which were removed from the jambs, or two others provided for the purpose. These blinds will be hinged to the side-walls so as to be opened when necessary, and secured in the middle by an ordinary staple and hook. Ten inches outside of this frame-work an outer wall, also of lattice-work, will be placed with the front, opening in the center in the same manner as the inner wall. The whole must be covered with a small inclined roof of boards, (E B,) placed at least 15 or 20 inches above the instrument. The lower part, (J,) or the base, may remain open, unless the shelter is within 10 feet of the ground, in which case the bottom will be covered with slats 2 inches wide, placed 1 inch apart. The instrument shelter will be painted with white lead. The building selected should be detached from other buildings, and where this cannot be had, should be higher than those surrounding it. Too much attention cannot be given to the proper setting up of the instruments and their protection from local influences.

2. An observer, upon arriving at his station, will, as soon as practicable, put himself in communication with the board of trade, chamber of commerce, board of underwriters, and such other bodies as may desire to co-operate with this office in its efforts to make the service locally, as well as generally, useful. If meteorological committees have not been appointed by any or all of these bodies, their appointment should be urged as a matter of special importance, and the committees requested to place themselves in communication with the Chief Signal-Officer. He will also communicate with such colleges, scientific associations, and other institutions of learning as may be located at or near his station, and will explain to their officers and members the nature and object of his duties, and invite their co-operation. He must bear constantly in mind that it is expected he will use every effort in his power to render his office of the greatest public utility.

3. The office-furniture will be of the plainest kind, and consist only of such articles as are absolutely necessary for the proper transaction of business. The room, furniture, and instruments must be kept neat and clean at all times, and always prepared for *inspection*.

4. The regular reports from station ——— will commence with the morning report of ———, and from and after that date three observations will be made daily, and transmitted by telegraph, to ———, and four observations, at different hours, for transmission, weekly, to this office.

5. The observations for telegraphic transmission will be taken daily at —— a. m., —— p. m., and —— p. m., (local time,) and after the proper corrections are made, will be entered on Form 5, supplied by this office, and also in the daily record of observations and the record of bulletins, and a weekly record of them on Form 4 will be sent to this office. The instruments will be read in the following order:

1. Barometer.	2. Thermometer.	3. Hygrometer.
4. Anemometer.	5. Anemoscope.	6. Rain-gauge.

6. The readings of the different instruments must be entered as made in the original record of observations and *not* copied in from a slip of paper. Observers will habitually carry this book when making an observation, and enter the readings in *pencil*, as noted at the time. They will also use this book for making the proper corrections, as indicated by the marginal references. Pen and ink must *not* be used for entering any observation or correction. The mid-day observations will be entered on the spare pages of this book, using one column for each day properly dated and timed.

7. The reports will be handed by the observer in person to the operator charged with their transmission, in the order and at the times named below, viz: Report No. 1, at — a. m.; report No. 2, at — p. m.; report No. 3, at — p. m. The mid-day report, when sent by telegraph, will be filed as soon as practicable after the observation is made.

8. Observers must be at the telegraph-office, with the reports carefully and plainly written out in *duplicate*, ten minutes before the hours named above, in order that the operator may be notified in time to prepare for their transmission, and must obtain the signature of the operator to *both* copies *of each report*, with the exact time of receipt by him. They will also furnish the manager of the office with a plainly written or printed list of stations (with their proper telegraphic numbers) from which reports are to be received at, and also of those to be sent from, his office, with the names of the stations to which they are to be sent. If reports are to be transferred or selected for transfer at any station, the observer at that station must personally attend to such transfer or selection, unless prevented by sickness or other extraordinary cause. To provide against such an event, he must so arrange with the manager that the regular transmission of reports will not be interrupted by his absence.

9. The following is a list of stations, with their proper telegraphic numbers. Those

Digitized by Google

to be received at station No. —— are underlined in red ink, and any failure to receive them must be promptly reported to this office, with a statement of the probable cause of failure.

Station.	No.	Station.	No.
Cape Roziere, Canada	1	Davenport, Iowa	51
Chatham, N. B	2	Leavenworth, Kans	52
Santiago de Cuba	3	Cairo, Ill	53
Kingston, Jamaica	4	Cape May, N. J	54
Father Point, Canada	5	Galveston, Tex	55
Sydney, C. B	6	Montreal, Canada	56
San Juan, Porto Rico	7	Quebec, Canada	57
Bridgetown, Barbadoes	8	Toronto, Canada	58
Basse Terre, Guadeloupe	9	Punta Rassa, Fla	59
Plaister Cove, N. S	10	Wood's Hole, Mass	60
Saint John's N. B	11	Vicksburg, Miss	61
Portland, Me	12	Memphis, Tenn	62
Boston, Mass	13	Nashville, Tenn	63
New London, Conn	14	Louisville, Ky	64
New York City, N. Y	15	Cincinnati, Ohio	65
Albany, N. Y	16	Saint Louis, Mo	66
Philadelphia, Pa	17	Omaha, Nebr	67
Baltimore, Md	18	Cheyenne, Wyo	68
Washington, D. C	19	Santa Fé, N. Mex	69
Wilmington, N. C	20	Corinne, Utah	70
Charleston, S. C	21	Fort Benton, Mont	71
Savannah, Ga	22	Shreveport, La	72
Augusta, Ga	23	Jacksonville, Fla	73
Lake City, Fla	24	Portland, Oreg	74
Key West, Fla	25	San Diego, Cal	75
Montgomery, Ala	26	Denver, Colo	76
Mobile, Ala	27	Virginia City, Mont	77
New Orleans, La	28	Port Stanley, Canada	78
San Francisco, Cal	29	Port Dover, Canada	79
Norfolk, Va	30	Kingston, Canada	80
Oswego, N. Y	31	Saugeen, Canada	81
Rochester, N. Y	32	Breckinridge, Minn	82
Buffalo, N. Y	33	Fort Sully, Dak	83
Cleveland, Ohio	34	Indianola, Tex	84
Toledo, Ohio	35	Alpena, Mich	85
Detroit, Mich	36	Pembina, Dak	86
Chicago, Ill	37	La Crosse, Wis	87
Milwaukee, Wis	38	Fort Garry, Manitoba	88

Indianapolis, Ind	43	Fort Gibson, Ind. T	93
Lynchburgh, Va	44	Eastport, Me	94
Burlington, Vt	45	Yankton, Dak	95
Mount Washington, N. H	46	New Haven, Conn	96
Keokuk, Iowa	47	Erie, Pa	97
Grand Haven, Mich	48	Dubuque, Iowa	98
Escanaba, Mich	49	Pike's Peak, Colo	99
Marquette, Mich	50	Havana, Cuba	100

10. At each station an observation of the barometer will be taken daily at 12 m., Washington mean time, and if a change equal to, or greater than, fifteen hundredths of an inch has taken place since the regular morning telegraphic observation, the fact will be reported immediately by telegraph to the Chief Signal-Officer, with the direction of wind and state of weather and the velocity of the wind in miles per hour; the whole being sent in the same order in which they are given here, and in the regular cipher words. A regular weekly report of these mid-day observations will be made out on Form 4 and mailed to the central office with the other reports on this form.

In these special reports the barometer will be corrected, in the usual manner, for temperature, elevation, and instrumental error.

11. In addition to the midday observation and those made for telegraphic transmission, three others will be taken daily—at 7 a. m., 2 p. m., and 9 p. m., (local time,) respectively. These will be recorded upon Form 4 in the same manner as the telegraphic observations, but on a separate sheet, and a copy of them will be forwarded weekly to the office of the Chief Signal-Officer.

12. After delivering his own reports to the operator, each observer or an assistant designated by the observer will remain in the telegraph-office until they are sent to their proper destination, and until the reports from other stations intended for use at his station are received, or until assured that their receipt has been prevented by some cause beyond the control of the operator. The reports for station No. —— should be received by —— a. m., —— p. m., and —— m., respectively; and when they are de-

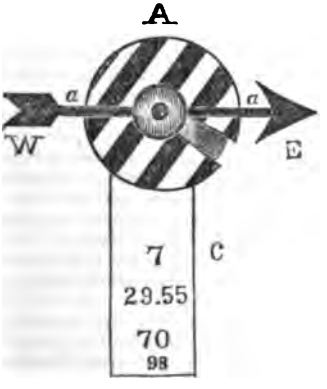
Digitized by Google

layed beyond these hours, the facts should in all cases be promptly reported to this office by mail, with a statement of the cause of delay when known.

13. To avoid useless delay in getting out the bulletins, observers should arrange, whenever practicable, to have the use of a desk or table in or near the operating-room of the telegraph-office, in order that the reports may be translated and written out properly as received. Where permission to occupy the room for this purpose is granted by the manager, a small table will be furnished by this office for the use of the observer, whenever necessary.

14. The telegraph-offices at which the reports are received will be kept constantly supplied by the observers with Form 2, and in all cases the receiving operator will be required to fill in this form with the name of station, *date*, and time that reports are received. Observers will in like manner fill up Form 5 before delivery.

15. ***Reports must be made on Sundays at the regular hours, and delivered punctually at the telegraph-office.***



16. Immediately upon the receipt of the morning reports at any station the observer will translate them into ordinary language, and write them out clearly and plainly on the bulletin sheet, (Form 3,) filling in each column with the data named in its heading. The manifold issue of the bulletin will be used, and when completed, copies will be regularly posted in the rooms of the board of trade, chamber of commerce, and such other conspicuous places as may have been officially designated. Copies may also be furnished to private individuals when personal application is made for them at the observer's office, and their preparation does not interfere with the issue of those designed for public use, or with the ordinary and regular duties of the station. A copy will be furnished to each evening newspaper published at the station, and its regular publication secured, if possible. The local observations will invariably be entered in all bulletins, press-reports, and maps. At stations supplied with the manifold maps, their preparation follows the bulletins, and they will be printed as rapidly as practicable, and furnished to such parties as may be designated by this office, upon the recommendation of the observer in charge. The "War Department Weather Map" will then be changed in accordance with the following key and instructions:

The index consists of an arrow, disk, and card, which show the direction and velocity of the wind, state of the weather, height of the barometer, and height of the thermometer, and relative humidity at the place on which they are affixed. The index will be changed once daily, at 10 a. m., or as near that hour as is practicable. The arrow flies with the wind.

A red disk indicates clear weather.
A blue disk indicates sky covered with clouds.
A ¼-blue disk indicates sky one-fourth covered with clouds.
A ½-blue disk indicates sky one-half covered with clouds.
A ¾-blue disk indicates sky three-fourths covered with clouds.
A black disk indicates rain.
A white and black barred disk indicates snow.

A silicate tag projecting below the disk, and held in position by the same screw that fastens the arrow and disk, shows the velocity of the wind in miles per hour, the height of the barometer in inches and hundredths, and the height of the thermometer in degrees, Fahrenheit, and the percentage of humidity.

Example:

In using these tags a hole will be drilled through them near the upper end, by which they will be fastened to the screws. When the symbols are changed, these tags need

Digitized by Google

not be removed, as the lead-pencil writing may be erased by means of a small piece of sponge slightly moistened, taking care that the face of the map is not soiled.

With proper care these tags will thus last for a number of months.

The barred-disk A indicates snow, and the position of the arrow *a a* that the wind is blowing from the west. The upper figure on the card, *c*, shows that the velocity with which the wind is blowing is seven miles per hour. The height of the barometer, shown by the middle figures, is twenty-nine inches and fifty-five hundredths, the height of the thermometer seventy degrees above zero, and the relative humidity, indicated by the lower figures, is 98 per cent. When the temperature is below zero the minus sign should always be prefixed.

To facilitate changing the disks they are cut so as to slip on and off without removing the clamp, as shown in the following figure:

A calm is indicated by the omission of the arrow.

17. The afternoon reports will be received and translated in the same manner as those received in the morning, and will be bulletined at such places as will insure the *greatest* publicity. At stations where the morning papers go to press too early for the publication of the midnight report, they will be furnished with the afternoon issue.

18. The night reports, after translation, will be carefully and promptly written out on Form 3 and furnished to such morning papers printed at the station as desire them for publication. Observers will endeavor to arrange with the publishers to have the reports taken from the observer's office, but where this arrangement cannot be effected, the observer, or his assistant, will deliver them in person at the different newspaper offices.

19. At stations where the publishers of newspapers desire to have the three full reports of the previous day, they will be supplied by the observers on the manifold form issued by this office for that purpose. In such cases, observers will write up the morning and afternoon reports during the day and evening, so that there will be no delay in getting out the full report at midnight. In filling out the heading of the daily bulletin, for publication, the time of the reports will be the exact local time of the place of publication, and will be so stated at all stations. In carrying out that part of their duty which relates to the publication and distribution of reports, observers will be required to act promptly and intelligently, as the usefulness of the reports depends wholly upon the speed and accuracy with which they are laid before the public.

20. In furnishing weather-reports and items for publication, observers must confine themselves strictly to the instructions issued from this office, and will not, *under any circumstances, publish, or cause to be published, forecasts or predictions of the weather.*

21. At each station a daily record will be kept of missing reports, showing the names and official numbers of the stations, with the cause of their non-receipt when known, and also such telegraphic errors as may come to the observer's knowledge. A copy of this record on Form 19 will be forwarded weekly to this office in the same package with the originals of Form 2.

22. A copy of the latest synopsis received by the observer or the Associated Press at stations where it is regularly received, will be posted with each copy of the bulletin that is publicly displayed. These copies will be made in manifold on Form 15 furnished by this office.

23. Observers will be held directly responsible for the correct publication of all weather-reports at their respective stations, and must take every precaution to guard against errors, especially in the newspaper copies, where they are most frequently found. The accuracy of the published reports must be verified by daily personal inspection, and when errors are found they should be traced to their proper sources and measures taken to prevent their repetition as far as in the power of the observer. The use of the regular official heading authorized by this office for all reports must be insisted upon, and care taken that correct time of issue is given to both the bulletin and synopsis.

24. When the wires of the telegraph company by which the reports are regularly transmitted are known to be down or obstructed in such a manner as to prevent their prompt transmission, they will be sent, until such obstruction is removed, over the wires of any other company possessing the necessary facilities, as provided for in special instructions from this office.

Digitized by Google

25. In all reports and bulletins posted or furnished to the press for publication, due credit must be given to the telegraph company over whose wires they were received.

At all stations ordered to make river-reports, the depth of water above low-water mark will be observed at three o'clock (local time) each afternoon.

The sixth space in first line of Form 5 will be used for the depth in feet whenever the number exceeds eight, and the sixth space in second line for the odd inches.

Whenever the depth does not exceed 8 feet, the word "River" will be used to fill the space in the first line, and the whole depth given in the second line in inches.

In furnishing the reports to the press, and in filling up the bulletin, Form 3, the daily change will be given. This change will be obtained by taking the difference between the current report and that of the preceding day.

27. Whenever any sudden or unusual change occurs in the condition of the river between the regular hours of observation, a special series of observations will be made and the observed depth will be reported in the usual manner at the next succeeding telegraphic report, and these special reports will be continued tri-daily (one at each telegraphic report) until the river resumes its normal condition, when the morning and midnight specials will be discontinued.

28. In carrying out these instructions, observers will use the cipher-words in the column headed "Rise," when the river is rising at the date of report, and those in the column headed "Fall," when it is falling.

29. The observations for the morning and midnight special river-reports will be made within an hour of the time of report if practicable.

Observers must exercise great care in making and recording the river-reports, in order that they can be relied upon as accurate by interested parties.

30. The amount of rain-fall (or melted snow) will be measured and reported at each of the three telegraphic reports only.

INSTRUMENTS.

31. Each station will be supplied with the following instruments:

Two standard barometers, (Green's.)
Two standard thermometers, (Green's.)
One standard hygrometer, (Glaisher's model.)
One maximum thermometer.
One minimum thermometer.
One anemometer, (Robinson's,) with self-registering attachment.
One wind-vane.
One rain-gauge.
One clock.

Other instruments may be added from time to time as the necessity for their use becomes apparent.

BAROMETER.

32. The barometers will in all cases be carefully compared with the standard at this office before issue, and the amount of instrumental error will be sent with each when it leaves this office.

The two barometers furnished each station will be carefully compared by the observer in charge once a month, making a series of comparative readings of not less than twenty in number, which will be recorded in full in the daily journal as soon as made. In making out the monthly abstract of the journal these readings will be embodied in the instrumental report; they must not be corrected for elevation, but for temperature and instrumental error only.

No change of instrumental error will be made by any observer without direct authority from this office.

The barometer should be placed in a room of a temperature as uniform as possible, not heated, nor too much exposed to the sun. It should be suspended at the height of the eye, near a window, in such a manner as to be lighted perfectly without exposure either to the direct rays of the sun or to the currents of air which are always found at the window-casings and doors. To protect the instrument from external injuries, from dust, and from the direct radiation of warm bodies or the currents of air from the window, observers will fasten the wooden case in which it is carried firmly against the wall in a vertical position near the window, in such a manner that the cover will open in a direction parallel to the panes. An opening large enough to admit the tube of the barometer will be cut in the upper end of the box; and directly above this, at the distance of one inch, a strong hook will be driven into the wall. This hook should extend two or three inches beyond the box, and upon it the instrument will be suspended. When not in use the cover will be closed; but when an observation is to be taken it will be opened, and the instrument drawn out on the hook, clear of the box, and in

Digitized by Google

the full light of the window. After the observation is made the barometer will be slipped back into the box.

33. All readings of the barometer taken for telegraphic transmission will be corrected by the observer making the observation, for instrumental error, for temperature, and for elevation, before they are sent from his station. In correcting for temperature, the reading of the attached thermometer will be used, while in correcting for elevation the temperature used will be that of the exposed or open-air thermometer.

In correcting for elevation, the height of the surface of the mercury in the cistern of the barometer above the ground must be added, in all cases, to the height of the station above sea-level, as in the following example, viz: Suppose height of station above sea-level to be 670 feet; height of mercury (surface) in cistern to be 17 feet above the ground; then the elevation to be corrected for would be 687 feet.

In correcting for temperature, Table XVII, pages 66 to 71, Paper C, of Guyot's tables, will be used; and for elevation, Table XIX, page 92, Paper D, of the same book, when special tables are not prepared under the direction of this office.

34. In transporting a barometer, even across a room, it should be screwed up and carried with its cistern uppermost. For traveling, it is provided with a wooden case. On steamboats or railroads, it should be hung up by a hook in the state-room or car, and the lower end firmly strapped to the side of the room or car to prevent jarring. In wheeled vehicles, it should be carried by hand, supported by a strap over the shoulder, or held upright between the legs; but it should not be allowed to rest on the floor of the carriage, for a sudden jolt might break the tube. If carried on horseback, it should be strapped over the shoulders of the rider, where it is not likely to be injured, unless the animal is subject to a sudden change of gait. When about to be used, it should be taken from its case, and, while screwed up, gently inverted and hung up, when it can be unscrewed. While it has its cistern uppermost, the tube is full—is one solid mass of metal and glass—and not easily injured, but when hung up a sudden jolt might send a bubble of air into the vacuum at the upper end of the tube, and the instrument would be useless until repaired. Observers must never *swing* the barometer or endeavor to force the mercury against the top of the tube without first screwing up the large adjusting screw at the base of the cistern.

If the cistern should become dirty, it can be cleaned with safety, and without changing, in the slightest degree, the zero of the instrument. Everything used in the operation must be clean and dry. Blowing upon any of the parts must be avoided, as the moisture from the breath is injurious.

The instrument being placed upright, the cistern uppermost, unscrew and take off the brass casing which incloses the wooden and leathern part of the cistern. This wooden part (which has the grain crosswise, and therefore is not air-tight) is made in two pieces, fastened together by four screws and four brass pieces, each in the form of a half of a circular ring. It will be necessary to take out two of these screws and loosen the other two, when the brass pieces can be taken off. The upper wooden piece, to which the bag is attached, can then be lifted off, and the mercury will be exposed. By then inclining the instrument a little, a portion of the mercury in the cistern may be poured out in a clean vessel at hand to receive it, when the end of the tube will be uncovered. This is to be closed by the *gloved hand*, when the instrument can be inverted, the cistern emptied, and the tube brought again to its upright position. Great care must be taken not to permit any mercury to pass out of the tube. The long screws which fasten the glass portion of the cistern to the other parts can then be taken off, the various parts wiped with a clean cloth or handkerchief, and restored to their former positions. The mercury which had been taken out of the cistern must now be cleaned, or it must be replaced by other that is clean and pure. If the old mercury is merely dusty, or dimmed by a film of oxide, the cleaning may be effected by straining it through chamois-leather, or through a funnel with a capillary hole at the end of a size to admit of the passage of but a small thread of the metal. Such a funnel is conveniently made of letter-paper. The dust will adhere to the skin or paper, and the filtered mercury will present a clean and bright appearance. At stations where muriatic acid can be procured, the mercury may be easily and quickly cleaned by mixing about two ounces of the acid with it in a small vessel or cup and then pouring into the vessel clear water until it overflows and carries off all the impurities. When sufficiently pure the water will be poured off and the mercury heated over a gas or lamp light until all remaining moisture is expelled. If chemically impure, it should be rejected, and fresh, clean mercury used. With such clean mercury the cistern should be filled as nearly full as possible, the wooden portions put together and securely fastened by the screws and clamps, the brass casing screwed on, and the screw at its end screwed up. The instrument can then be hung up and re-adjusted. The tube and its contents having been undisturbed, the instrument should read the same as before. If a little mercury has been lost during the operation, and there is none at hand to replace it, no serious harm has been done; but if much is lost, the open end of the tube may become exposed in inverting the instrument, in which case air may enter. To guard against this error, a little fresh mercury will be added.

Digitized by Google

Station barometers will not be cleaned unless ordered by this office, or by an inspecting officer, or when such action appears to be absolutely necessary by the presence of air in the tube. In any case the fact will be promptly reported to this office, stating the number of the instrument so cleaned, with date, and result of the operation.

35. Each observer upon establishing a new station will, as soon as he is furnished with the correct elevation of his barometer above sea-level, prepare a table for reducing the barometrical observations to that level, in accordance with the following formula:

Formula.

(Guyot's tables, Paper D, page 88.)

$$c = \frac{f}{N} \times \frac{h'}{h}$$

c, is the correction required; f, the elevation of the station; N, the factor from the table on page 92; h', the reading of the barometer corrected for temperature; and h, the normal height of the barometer at sea-level, which may be assumed to be 30 inches for all stations.

For all observations *above* 30.20 and below 29.80 the full formula will be used; but between those numbers the first number only, $c = \frac{f}{N}$ need be used.

36. The following-named stations having been furnished with a constant correction, are excepted from the provisions of the foregoing paragraph:

Mount Washington, N. H.
Cheyenne, Wyoming Ter.
Denver, Colo.
Santa Fe, N. Mex.
Corinne, Utah.
Virginia City, Mont.
Fort Benton, Mont.
Pike's Peak, Colo.

37. This table will be made to cover the range of the barometer from 28.80 to 30.80, and will give a correction for every five-hundredths of an inch, and the full formula given in paragraph 1 will be used in its preparation. The table must be forwarded to this office for revision and approval before it is adopted by the observer.

THERMOMETER.

38. The thermometer should be hung in the instrument-shelter in such a manner that it will be always in the shade, and at least one foot from the wall of the building to which the shelter is attached, where the Smithsonian form of shelter is used. It must be protected against the light reflected from surrounding objects, and from rain, snow, and hail. The instrument must be placed exactly perpendicular, the middle of the scale being at the height of the eye in order to prevent error in reading. The readings should be made at all times, and especially in the winter, *through the panes*, without opening the window, when the shelter is built out from a window. When the shelter is built upon a roof, great care must be exercised in making the readings in order to prevent the instrument from being affected by the heat of the body or of the lantern at night. The observation must be made as rapidly as is consistent with accuracy.

HYGROMETER.

39. The hygrometer will be placed in the same shelter as the thermometer, and at a distance of one foot from it. The cistern will be kept supplied with pure water at all times when the temperature of the air is above the freezing point, and the cover of the wet bulb will be changed every month, and the bulb carefully cleaned. The cover may be washed as often as necessary, without removal, by means of a jet of clean water from a small syringe.

When the temperature of the air is below the freezing point the water will be emptied from the cistern, and in making an observation the wet bulb will be moistened with cold water, and the instant the mercury has reached its minimum its height will be noted. Alcohol must not be used.

The relative humidity of the air will be obtained from Table VII, page 46, of Guyot's Tables, when special tables are not furnished from this office.

Especial care must be taken to keep the tubes of the hygrometer clean, and the wet bulb properly moistened, and to make the observations and deductions accurately, as

Digitized by Google

the humidity of the air forms an important element in all calculations of atmospheric changes.

Whenever the dry bulb of the hygrometer is observed to show a higher temperature than the exposed thermometer under similar exposure, the observer will cut a circular opening, about three inches in diameter, in the board to which the dry and wet bulbs are attached, and directly behind the bulbs.

MAXIMUM AND MINIMUM THERMOMETERS.

40. The board which accompanies these instruments will be securely fastened with screws, in a horizontal position, upon the side of the instrument-shelter, or observatory, near the hygrometer and exposed thermometer.

The brass support for the minimum will be screwed into the upper part of the board and the holes so arranged as to slightly incline the left end of the support.

The top of the thermometer will be fastened by the small brass screw upon the support, while the lower end will be dropped into the notch to the left.

For the support of the maximum thermometer the long brass pin with a nut will be screwed into the board, in the hole to the extreme right. The nut will be taken off and the pin slipped through the hole in the upper end of the instrument, which will be securely fastened by replacing the nut and securing it tightly. The plain brass pin is then inserted in the hole at the left of the board, and the thermometer placed upon it so as to incline slightly in that direction.

The end of the pin to which the maximum is attached must be occasionally oiled to prevent friction.

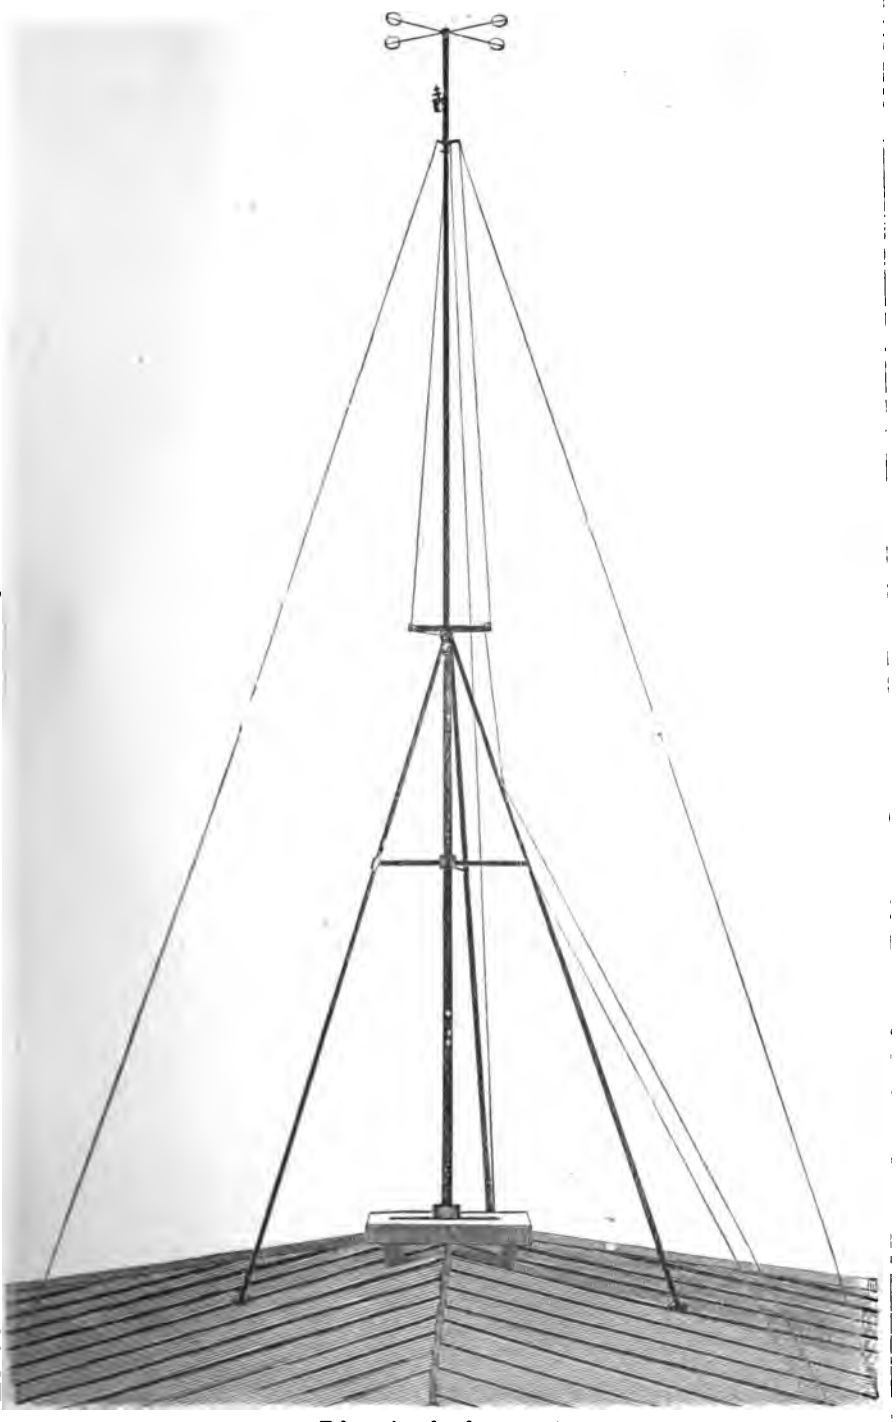
After unpacking the minimum it must be carefully compared with the exposed thermometer, and if an air-speck is found in the column the bulb will be immersed in warm water until all the air-bubbles disappear in the space at the top of the tube, *great care being taken not to break the bulb by heating it too suddenly.*

After fastening the top of the minimum upon the support, the lower end of the instrument will be raised until the top of the small index touches the top of the column of spirit.

The instrument is read by observing the number of degrees upon the scale where the top of the index rests. After taking a reading, the bulb or lower end of the thermometer, should be elevated until the index comes down to the temperature of the air, at the time of the observation, and the instrument will then be dropped into the notch at the left of the support, as before.

The maximum is read by observing the number of degrees upon the scale at the top of the column of mercury.

After taking a reading the observer will remove the pin to the left and then take hold of the thermometer, about three inches from the top, and spin it around several times, or until the top of the column is brought down to the temperature of the air at the time of observation. Care must be taken not to touch the bulb, and also that the nut is screwed up sufficiently tight to prevent the instrument from striking against the side of the board to which it is fastened. After adjustment, gradually raise the instrument to a horizontal position, and insert the pin as before.



Care should be taken in elevating the thermometer not to raise the bulb too high, as the column of mercury would then run to the upper end of the tube.

The observations upon these instruments will be made at the 11.35 p. m. report, and recorded upon Form 4, in the proper column.

ANEMOMETER.

41. The anemometer will be fixed in a vertical position upon the telescopic rod, or, when this has not been furnished, a post of sufficient height to bring the dial on a level with the eye of the observer, and must be in an exposed situation, so as to receive the full force of the wind; when possible, this post should be framed into the roof, to steady it and prevent the instrument from vibrating; but when this cannot be done, it should be framed at the bottom into two pieces of scantling, not less than three feet in length, that cross each other at right angles, and which can be nailed fast to the roof or platform upon which the instrument is placed. Short braces can be added when necessary to insure steadiness. The outer dial of the instrument is graduated in miles and tenths of miles—the figures 1, 2, 3, &c., indicating miles, and the subdivisions tenths. One complete revolution of this dial is equivalent to ten miles of wind, and carries the inner dial forward one subdivision. This inner dial registers up to 990 miles, and will not be used in making the ordinary observations, but observers will assure themselves, by making a daily comparative reading, that the record of the dials and that of the cylinder read alike at the time of changing the record-sheets on the self-registering attachment at mid-day. When a discrepancy is found to exist between the two records, the anemometer will be carefully examined as to the condition of the

Digitized by Google

dial-pegs, or contact-pins, (which should always be perfectly straight,) and the contact-springs. The latter are liable to become corroded by the action of the electric spark or moisture, and must be kept clean.

42. To obtain the velocity of the wind for the regular observations when the self-registering attachment is out of order, two readings of the outer dial must be taken, with an interval of five minutes between them, and the *difference* between these readings will be the distance in tenths of miles traveled by the wind in that interval. This, multiplied by twelve and divided by ten, will give the proximate velocity in miles per hour. Example: suppose the index of the outer dial to be at 3 when the first reading is taken, and at 3.6 five minutes after, the difference, 6, is the distance traveled in that time; and this, multiplied by twelve and divided by ten, gives a velocity of seven and two-tenths miles per hour. Whole numbers only will be used in expressing the velocity. When the decimal is greater than five-tenths, the unit's figure will be increased by one; when five or less it will be thrown out. The whole distance traveled by the wind in any twenty-four hours, provided it does not exceed one thousand miles, may be obtained from the inner dial by a double observation, making the interval twenty-four hours instead of five minutes, and reading the result directly from the dial, without calculation as above described for observations from the outer dial, and will be entered on both copies of Form 4.

43. The following directions for setting up and the general management of the electric self-recording anemometer attachment adopted by this office will be observed at all stations supplied with the apparatus.

Near the top of the post on which the anemometer is fixed, place two screws, "c" and "d," (Fig. 1,) to each of these screws fasten the wires separately, (the insulated wire to one, and the naked wire to the other,) leaving just sufficient of the upper end of each wire to reach to the outside ends of the contact-bars "a" and "b," to which securely fasten with the binding screws, taking great care not to loosen the insulating attachment "g." Then pass the lower ends of the wire down the post, over the roof, and down the side of the house (securing so the wind will not sway them) to the top of the office-window, pass them in through two small holes (where the sash and shutters will not injure them) and down the inside. In crossing the roof it is well to fasten them between two wooden strips, one on top of the other. One wire should then go to the screw-cup "h" (Fig. II) and the other to one pole of the battery at "i," then from the other pole, "m," of the battery run a wire to the screw-cup "k," when the circuit is completed and the armature will be closed once for each mile the wind travels.

Particular care must be taken that all of the connections are tight.

For putting on the paper.—Place the cylinder "s" on a table in front, with the screw "r" to the left hand, place the paper on the cylinder with the top of it from the screw. Let the line marked 12 m. (noon) come on the line marked on the cylinder, and place a small rubber-band on each end. The lines on each end of the paper will then exactly coincide.

Place the cylinder "s" in its position, so that the end on which there is no screw "t" will be close up to the post on which it rests. Slide the small sliding bar "n" on the horizontal bars "o" "o," until it fits on the ends of the screw axle "r;" then revolve the cylinder until the pencil rests on the end of the upper line marked 12 m., and tighten the thumb-screw "n."

To regulate the length of the mark, first move the armature set-screw "p" until the point of the pencil rests on the upper line marked 12 m., then (after loosening the set-screw which holds down the coils) move the magnet by means of the set-screw "q" until the pencil-mark is a little less than one-eighth of an inch long. *The mark should never exceed one-eighth of an inch.*

Care must be taken in adjusting the armature spring, so that it will not be too strong for the magnet, and still strong enough to draw back the pencil in a straight line.

The pencils should be kept pointed enough to give a clear, distinct mark.

The clock should be wound every day when the record is changed.

The record should be changed daily at 12 o'clock, noon.

At stations furnished with this self-recording apparatus, the hourly velocity of the wind will be deduced from the record of the 15 minutes (multiplied by four) immediately preceding the time of observation.

The screw posts, or, in the old style of anemometer, the connecting-bars, must be kept bright where they form connection with the conducting wires, to prevent resistance to the passage of the current.

Especial attention will be given to the large dial-screw, and when found loosened it will at once be tightened, but care must be taken that it is not screwed up tight enough to interfere with the free motion of the dials.

The anemometer will be kept well oiled, so that there will be no friction and consequent wear of the wheel-works.

Digitized by Google

The instrument must not be taken apart unnecessarily, and those having the new style of contacts will be manipulated with especial care.

Observers will familiarize themselves with the construction of the several parts of the anemometer, in order that they may be able to locate faults whenever the instrument is out of order.

BATTERY FOR ANEMOMETER.

44. The field-battery in use at the various stations of observation differs slightly from the ordinary form of Daniells' battery used on telegraph lines, in the manner of construction, the glass jar of the latter being dispensed with, and the negative (copper) element used as the containing vessel instead. The following directions for setting up and using this form of battery will be observed:

1. In putting the battery together for use, place the porous cup inside the copper vessel, and the star-shaped zinc element inside the porous cup.

2. Fill the copper vessel with a strong solution of sulphate of copper (preparing this liquid in another vessel by dissolving about half a pound of crystals of the sulphate in a quart of pure water) to within one inch of the top: *crystals of the sulphate must never be plunged in the copper vessel, neither must sulphuric acid be used to strengthen the battery*, as by so doing the copper vessel will be rapidly destroyed. The porous cup is also filled with pure water to within one inch of its top.

3. After all the cells are filled in this manner, connect the copper (positive) pole of one cup with the zinc (negative) pole of the next one by short pieces of insulated copper wire, using the copper clamps for attaching the ends of the wires to the zincs, and the fixed binding-screws for attaching them to the coppers. The main wires through which the circuit is formed will be attached to the copper and zinc elements of the outside or end cups, respectively.

4. A battery carefully put up in this manner should work with but slight diminution of force, for at least fourteen days, at the end of which time the porous cups will be taken out, emptied, washed thoroughly, and all pure copper on their outer sides removed, and will then be refilled with pure water. Care must be taken to avoid disturbing the paraffine at the bottom of the cups, as it is used there to prevent contact between the zinc and copper elements. The zincs will also be thoroughly cleaned by means of the battery-brush provided for that purpose. When properly cleaned they should present a comparatively bright surface.

5. The liquid in the copper vessels will not be changed as often as the water in the porous cups, but only when it loses its dark-blue color. It will be stirred daily, in order to keep it of equal strength above and below, as the sulphate held in solution has a tendency to settle to the bottom on account of its greater specific gravity, and thereby localizing its action.

6. The binding-screws and the ends of the small connecting wires must be kept scrupulously clean to insure good connections, and the copper vessels kept at least one inch apart to prevent contact. The cells should rest on a *painted* wooden base to insulate them from each other and from the earth, and care must be taken to prevent any escape of liquid from the several cells by which a connection might be formed between them.

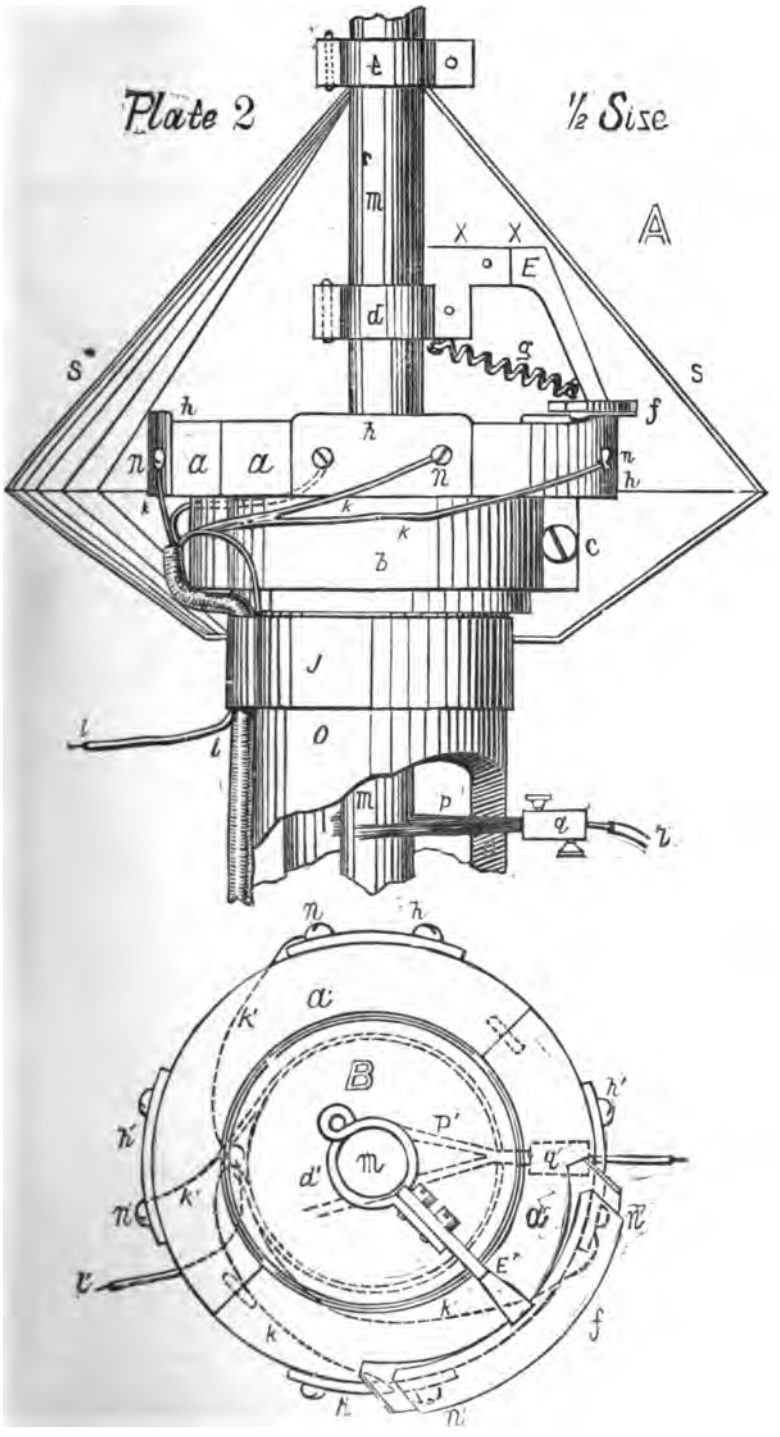
7. Whenever practicable, observers will purchase their supply of sulphate of copper at the station where it is to be used; where this cannot be done, it will be furnished from this office.

8. The copper vessels will be kept properly painted on the outside.

45. DIRECTIONS FOR GIBBON'S ELECTRICAL RECORDING ANEMOMETER AND ANEMOSCOPE.

Setting up anemoscope.

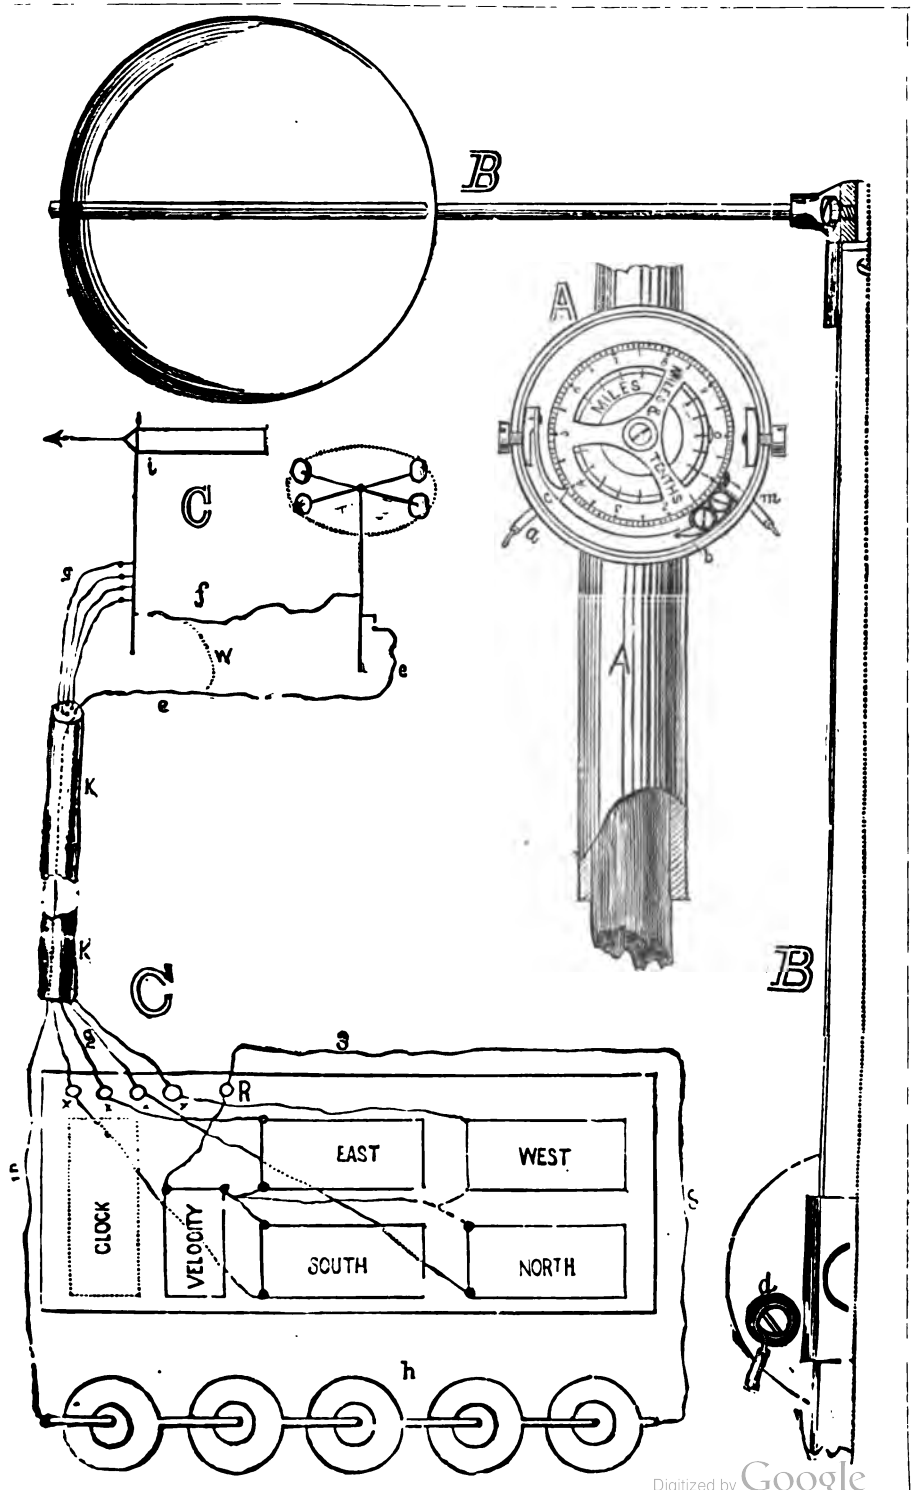
1st. From the top of the large wind-vane remove the weather-cap, which is just above the friction-rollers.



2d. Immediately beneath the friction-rollers, and close up under the circular plate upon which the rollers run, place the bisected wooden ring *a a*, Fig. A, and *a' a'*, Fig. —, on which are fastened four pieces of brass *h* and *h'*, each one-eighth of the circumference of the ring.

3d. Fasten this ring by means of the iron clamp *b* and screw *c*. If necessary a band of metal, leather, or rubber must be placed inside to make the clamp fit.

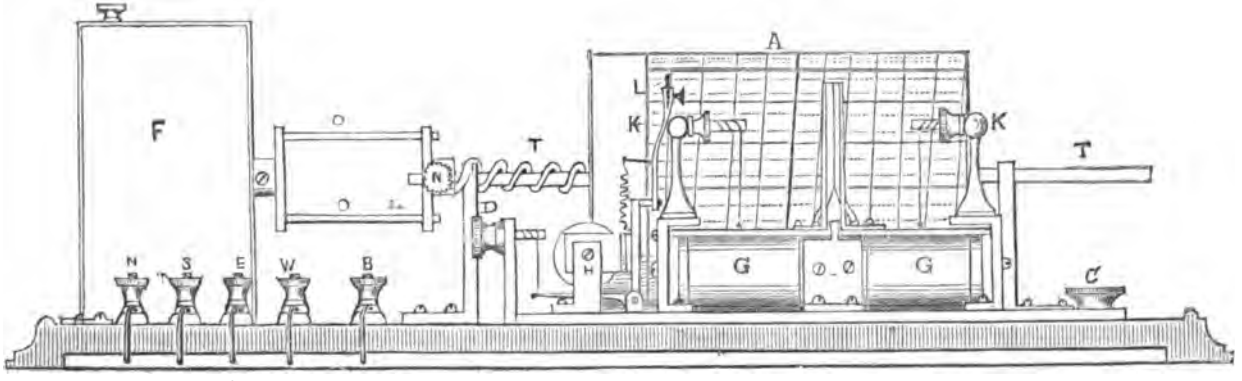
4th. This ring with one of the one-eighth brass sections *h* must be placed so that one of the sections must be directly opposite the north, and so the opposite halves of the ring exactly meet.



5th. At the point where the arm *d e*, which holds the friction contact *f*, is placed, file the upright shaft *m*, which holds the vane, until it is bright.

Digitized by Google

Digitized by Google



Digitized by Google

Digitized by Google

Gibbon's electrical recording anemometer and anemoscope.

Digitized by Google

6th. Fasten the friction contact *d*, *e*, *f*, to the shaft *m*, so that the parts *x x* will be level, and the friction surface *f* impinges fairly upon the brass pieces *h*, *h*, *h*, *h*.

7th. Take the five-wire cable *i*, and separate about a foot at one end. At the point of separation, wrap the outside covering with all the wires tightly together; clean well the ends of each wire; place the end of the cable where the outside covering is removed with the top one inch below the wooden ring *a a*, and tie it there temporarily.

8th. Carry one end of each of these wires *k*, *k*, *k*, *k* to their respective screws *n*, *n*, *n*, *n*, cut them off to the right length, and fasten them by the screws to the brass plates.

9th. The fifth wire is turned back down the cable, and the end left hanging loose, (to be afterward connected with the Robinson anemometer.)

10th. A piece of heavy tin or zinc *j* will be wrapped around the cable *i*, and 2-inch pipe *o* to prevent the cover *s* from rubbing or cutting the cable.

11th. Place the cover *s* over all the contact, and fasten with the clamp *t*.

12th. At some point "*o*" in the 2-inch tube *o*, (the support of the vane,) drill a hole about ¼ inch in diameter, into which drive a bunch of small wire "P," so that it will impinge upon the shaft *m* to make a good contact, and place a binding screw "*q*" upon it.

13th. From this binding screw, run a naked wire to the binding screw, which is not insulated, on the Robinson anemometer. (See "*o*," Plate 2.)

14th. Carry the cable from here to the electric recorder by the shortest or best route, taking particular care not to turn abrupt corners, and protecting the cable at such points by wrapping; pass it into the room through a hole, and not where it would be injured by the window.

15th. After getting into the room the wires should be tested for finding the proper points of the compass; to do this, (before putting the cable up,) it should be tested, and the wires numbered 1, 2, 3, 4, and 5 at both ends.

a. Attach the anemometer wire *e*, Fig. C, to one pole of the battery by splicing with another piece of wire.

b. Carry another wire to the binding post, R.

c. Attach a wire from *e* to *f*, shown by the dotted line in Plate I, Fig. C.

d. Have some person revolve the large vane, holding it long enough on each point of the compass to enable the person at the instrument to touch each wire to either binding post, and when the one through which the current flows is found, fasten it to its proper binding post. (The posts are marked N, S, E, W, and R, the latter going to the velocity magnet and to the battery.)

16th. Remove the wire *w* and make the connections with the Robinson anemometer by carrying the wire *l*, Plate 2, Fig. A, and "*e*," Plate I, Fig. C, to the insulated binding screw on the anemometer *d*, Plate I, Fig. B, and "*m*," Fig. A.

17th. Run a naked wire from the binding screw "*q*," Plate 2, Fig. A, to the remaining binding screw on the Robinson anemometer. This wire should be fastened to the posts of the vane and anemometer and not direct to the binding screws, as there would be danger of pulling them out.

DIRECTIONS FOR CARE OF INSTRUMENT-PLATE.

The velocity and direction are given simultaneously, the velocity once every mile, and the anemometer closing the circuit for the direction.

FOR PUTTING ON THE PAPER.

Place the cylinder on the table with the screw "*t*" to the left hand, place the paper on the cylinder with the top of it from the screw, let the line marked 12 m. (noon) come on the line marked on the cylinder and place a small rubber-band on each end. The lines on each end of the paper will then exactly coincide.

Place the cylinder A in its position so that the top end will be close up to the post on which it rests; slide the small sliding bar N on the horizontal bars *o o*, until it fits on the end of the cylinder axle I I; then revolve the cylinder until the pencil which marks the direction rests upon the end of the line marked 12 m. on the lower half of the blank form, then tighten the thumb-screw N.

The length of the mark for velocity is adjusted before being issued. To adjust the pencil to the lines, turn the eccentric screw *c* until the velocity pencil I is in proper position, which will leave the direction-markers properly adjusted.

The pencils should be kept nicely pointed. The clock should be wound and the record changed every day at noon.

WIND-VANE.

46. Two wind-vanes will be furnished at each station; one small one to be sent with the observer for immediate use upon his arrival, and one large one to be sent as soon

Digitized by Google

after the station is opened as practicable. When the latter is received the small one will be removed and carefully stored by the observer for use in cases of emergency.

47. The vane used for getting the direction of the wind must be set in a place as free and open as possible, in order that the wind may act freely upon it, and must never be sheltered by surrounding buildings or other objects. When the small one is used, observers will mark, with the aid of a compass, upon a wooden dial, at the base of the upright which supports the vane, the true meridian of their respective stations. The magnetic variation at the stations now occupied is shown in the following table:

Station.	Variation east.	Station.	Variation west.

49. When the large vane is received at any station it will be immediately erected upon the building in which the observer's office is located, provided the consent of the owner of the building can be obtained, and the roof is strong enough to support its weight.

The general appearance of the vane, and the location of the several parts, are shown in the illustration herewith. The iron straps which unite the two parts of the foot-block will be taken off and the block separated before raising the vane, in order to put the iron socket holding it in proper position. After the vane is up the pieces will be fastened firmly together again by these straps. The central rod can be lengthened whenever necessary by adding a piece of the same diameter and cutting a screw-thread on both ends.

Where the office is not on the upper floor so that the rod can be brought into the

Digitized by Google

room through the roof, the lower half of the rod will not be attached, but must be stored away for future use. When the office is on the upper floor the central rod will be brought into the room and allowed to project about two inches through the ceiling. The gilded arrow will then be screwed on and a circle drawn around it on the ceiling a little greater in diameter than the arrow. This circle will be divided into the eight points of compass used in the weather-reports, care being taken to get the true meridian as a starting-point.

50. All stations supplied with the standard wind-vane, with the indicator extending through the roof to the office-ceiling, the words "Adjusted to the true meridian" will be printed inside the vane-circle upon the ceiling.

51. When permission cannot be obtained to put up the vane the fact will be reported at once to this office.

The services of a skilled mechanic may be employed, whenever necessary, in erecting this vane.

The packing-box in which the vane is received will be preserved for use in the event of its removal at any future time.

52. The observation of the vane requires more care than is usually given. In winds of considerable strength the vane is never at rest, or fixed in the same direction; it oscillates incessantly, and its oscillations increase in extent with certain winds and with the violence of the wind. In such cases observers must *note the mean* direction between the extremes. When the wind is too light to move the vane, and when it is calm, no direction will be given in the report, but the space will be filled with the proper cipher-word for "Calm." The attention of observers is called to this matter in order to prevent them from recording the direction of the wind when it is calm. The direction of the wind will be designated by the eight principal points of the compass, beginning with the north and moving around by the eastward, and numbered from one to eight respectively. In reporting changes in the *direction* of the wind, the terms *veering* and *backing* will be used. The term *veering* indicates the changing of the wind from N. to E. to S. and so on, while *backing* being the reverse term, indicates that it changes from N. to W. to S. and so on.

The bearings of both vane and anemometer must be kept well and carefully oiled to prevent friction.

RAIN-GAUGE.

53. The rain-gauge will be placed, whenever practicable, with the top of the funnel-shaped collector 12 inches above the surface of the ground, firmly fixed in a vertical position, and protected from the interference of unauthorized persons. It will be examined at the time of making each of the three telegraphic observations, the amount of water it contains carefully measured by means of the graduated rod sent with each gauge, and then emptied and returned to its proper position. When a position at the level of the ground cannot be found with a sufficiently clear exposure, the gauge will be placed on the top of the instrument-room, or roof of the building occupied by the observer, who will measure the height above the ground and report it to this office. The measuring-rod is graduated in inches and tenths of inches, and the proportion between the cylinder and funnel is as ten to one, so that ten inches upon the rod correspond with one inch of actual rain-fall, one inch on the rod to one-tenth of rain, and one-tenth on the rod to one-hundredth of rain. Snow will be melted and then measured and reported in the same manner as rain, but the fact of its being melted snow must be noted under the head of remarks, in the weekly reports, on Form 4.

CLOCK.

54. The clock will be hung upon the interior wall of the room occupied as an office, and at each station will be carefully adjusted to the standard local time.

As it frequently happens that the telegraph time differs slightly from the standard local time, each observer will be careful to note the amount of this difference, in order to avoid confusion in filing his reports. As the time by which the observations are governed must be as nearly accurate as practicable, the observer will endeavor to arrange with the manager of the telegraph to have both clocks run together as a sure means of preventing errors.

55. Immediately after placing his instruments in position, each observer will make out and forward to the Chief Signal-Officer at Washington a full report in writing, stating the kind, size, and position of room selected; the street and number of the building in which the room is situated; the position of each instrument, and height of each above the ground, and also above the bench-mark furnished by this office. In giving the height of the barometer the measurement will be made from the surface of the mercury in the cistern. Whenever the position of any instrument is changed a record will be made of such change, with date and amount of difference in elevation, and the facts reported at once to this office.

Digitized by Google

In addition to this information, such other facts will be stated as will enable the Chief Signal-Officer to judge of the manner in which this part of the observer's duty has been performed.

56. Observers are cautioned against changing the position of any instrument without good and sufficient cause, and must report every change in elevation of six or more inches.

TOOL-BOX.

57. The following implements for cleaning and repairing instruments will be supplied, neatly packed in a small box, to each station:

Two screw-drivers, one fitting the screws about the cistern, the other those about the scale of the barometer; a small glass funnel; two porcelain cups, from two to four inches in diameter; kid-skin, shoemaker's thread, white wax, chamois-leather, a pair of small forceps, a small three-cornered file, and a blow-pipe.

MISCELLANEOUS APPARATUS.

58. *Printing-press for weather-map.*—At stations supplied with a press for printing maps, the following articles, not sent with the press, will be found necessary: A set of type-springs (one for each reporting station) for the rapid justification of the figures; one stick, one galley, sponge, brush, lye, sperm-oil, and benzine. All these articles will be purchased by the observer, except the type-springs, which will be furnished from this office.

When the Synopsis and Probabilities are printed, (and this should be done wherever there is a press,) a twenty-five-pound font of pica type will be necessary, in addition to the symbols and figures furnished with the press. The Synopsis should be set in a measure of twenty-eight ems wide. At stations supplied with the type-springs the figures will not be removed from the plate after each issue, as the work can be done much more rapidly and easily by simply taking out the springs and changing only such figures as are necessary.

The figures and symbols should, however, be completely removed twice each month, and, with the plate, thoroughly cleaned. The figures can be cleaned daily in the plate by using a sponge moistened with benzine. The type used for the Synopsis should be washed with lye. The ink-roller should be cleaned weekly, or oftener if necessary, and everything pertaining to the press must be kept well cleaned to prevent difficulty.

If stations are added for which the bed-plate has not been pierced, observers will have the necessary work done, being careful to get the new stations in their proper geographical position.

One copy of the map will be kept on file in the observer's office for reference, and on Saturday of each week a copy of the current issue will be mailed to this office.

59.—INSTRUCTIONS FOR PRINTING AND DISTRIBUTING THE DAILY SYNOPSES AND PROBABILITIES OF THE SIGNAL-SERVICE, UNITED STATES ARMY, ISSUED BY CO-OPERATION OF THE WAR AND POST-OFFICE DEPARTMENTS.

1. The press used is the Liberty No. 3, and will be supplied to each distributing station from the central office in Washington.

2. The following articles, required for working the press, when not sent with it, will be purchased by the observer in charge at the nearest reliable type-foundery, and a bill for the same forwarded to this office for settlement:

1. Composition roller.
2. One oil-can.
3. One mallet.
4. One shooting-stick.
5. One planer.
6. Fifty quoins.
7. Six pieces furniture.
8. One composing-stick.
9. One rule.
10. Ten pounds leads.
11. One lye-brush.
12. One saw.
13. One saw-block.
14. One pound Johnson's ink.

3. The standard kind of type used will be pica condensed, of which one 30-pound font will be purchased by the observer at the nearest type-foundery. The following electrotypes for use in printing the Synopses and Probabilities will be furnished by the central office:

1. Two official heads.
2. Two official autographs of Chief Signal-Officer.
3. Two "Synopses."
4. Two "Probabilities."

Digitized by Google

With proper care the type should last two years and the electrotypes one year.

The Synopses and Probabilities will be printed on flat letter-paper furnished from the central office, and timely requisitions will be made for it. Observers will also see that at least one month's supply is kept constantly on hand.

5. The copies printed at all stations will be similar in form, size, and appearance to those printed at the central office, and bear the same time and date.

6. The Synopses and Probabilities will be issued every morning, except on Sundays, and two copies of every issue will be mailed in one wrapper to each post-office on the list furnished the observer from the central office; also two copies to this office regularly each day. They will be delivered at the post-office of the station where printed in time to be sent off with the earliest morning mail leaving the station. The observer-in-charge will ascertain from the postmaster of such office the precise hour at which they must be delivered for this purpose, and will instruct his assistants accordingly by posting up in his own office an order setting forth the time of delivery and name of assistant charged with this duty.

7. One assistant at each station will be charged with the duty of printing the Synopses and Probabilities alone. He will report for duty one hour before the usual time of receiving the Synopses from the telegraph-office, for the purpose of clearing up and distributing the type, cleaning press, and cutting the paper. The average time required for composition will be one hour; and when the form is on the press the sheets must be worked off in time for the mail, the number varying from 500 to 800 per hour.

8. An assistant will be at the telegraph-office at least ten minutes before the usual time of receiving the Synopses from Washington, and will carry it without delay, when received, to the printer. This assistant will remain at the office to fold and mail the Synopses, and will perform his duty promptly and with regularity.

9. The envelopes or wrappers will be addressed by an assistant selected for the legibility and rapidity of his writing. Especial attention must be paid to legibility by the observers to prevent errors and delays in transmitting these reports through the post-office. Whenever practicable, this duty will be performed by the assistant referred to in paragraph 8, and at least one full day's supply will be kept constantly on hand properly addressed.

10. Proper arrangements will be made by the observer in charge to supply promptly the place of any one or more of the assistants who may be absent through sickness or other causes, and to accomplish this he will instruct his other assistants in the various duties provided for in these instructions.

STAMPING MAPS.

60. *Instructions for stamping manifold weather-maps.*—1. Count off from ten to fifteen maps from the top of the book.

2. Place the iron plate under the number counted out, and turn a map down upon it.

3. Place a sheet of carbon-paper smoothly upon this map, and then turn down the next map, on which put another sheet of carbon, and so on alternating carbon and maps until the number to be issued is complete, leaving the last map without carbon upon it, taking care to smooth all when down.

In making three or four maps only a sheet of blotting-paper should be placed next to the iron plate and beneath the lower map.

4. Place the box of stamps at the top of the map, with each die in its proper place, and taking especial care not to allow the hands or mallet to rest on the paper, and thus mark and deface the lower maps.

5. First stamp with the symbol-dies the direction of the wind and state of weather, as indicated by the legend on the maps. Hold the die perpendicular to the map and strike it hard enough to make the impression go through all the maps without cutting the upper one. The actual amount of force required can only be learned by practice.

6. After the weather use the figure dies, taking care that the figures for one station do not interfere with those of any other. Stamp the first two figures (thermometer) close together, the next two (barometer, 29 or 30) one-eighth of an inch from the first pair, the last two of the barometer following closely. The last of the figures (velocity of the wind) are to be separated one-eighth of an inch from those for the barometer. Great care must be taken to make the figures neat and regular in appearance, and to stamp them so they can be read without difficulty.

7. After the maps are properly stamped write with the stylus in head-line the name of station, day of week, date, and time of report, thus: "Washington, D. C., Saturday, April 20, 1872, 7.35 a. m."

WATER-GAUGE.

61. No definite form of water-gauge has been adopted, owing to the difficulty of getting one at a reasonable cost that would be adapted to the essentially different circumstances under which it must be used at the several river-stations. The following

Digitized by Google

description of a simple form of gauge may be useful in localities where it is difficult to get one of more scientific construction, or to be used as a temporary substitute for the latter in cases of emergency:

Take a piece of pine scantling, from 1¼ to 1½ inches in thickness, and from 5 to 6 inches in breadth; the length varying according to the depth of the water where it is to be used.

Having planed the scantling smooth, give it a heavy coat of white zinc paint, and after the paint is dry divide the scantling into feet and tenths of feet with a rule and lead-pencil.

With a small brush paint the tenths of feet black, except the center and initial ones of each foot, which will be painted red and in heavier lines than the intermediate ones, thus:

Indicate each foot, with its proper number, in plain figures marked on the white surface just above the triangle.

Having thus marked the staff up to a sufficient height to insure getting the maximum high water, select a pile, or other stationary object, in some portion of the levee or wharf where the staff will be secure from being damaged or defaced by coming into contact with vessels, and where it will not be left dry by the tide. Lower the staff into the water, taking care to keep it in a vertical position until it touches the bed of the river, and then secure it to the pile by spikes.

It would be well, in selecting a place for fixing the staff, to take the angle of a pier, and having fastened a smooth piece of scantling, about the size of the staff, on the side of the pile, secure the staff to this.

When the gauge is in an exposed place, liable to be washed by the waves, advantage should be taken of the first low water to secure it from being displaced, by driving in additional spikes, or lashing it with strong cords to the pile.

Care must be taken in reading the staff when the water is rough to get the mean of the rise and fall of the waves. It would be well, after securing the staff, to determine some point of reference, so that in case it should be destroyed another one could be put up at the same height. This may be done by taking and marking some given point in the vicinity, a pile or a rock, at any given height of the water. Thus, by driving a spike or drilling a hole, and recording the height of the water, as read from the staff at the time, you have a "bench-mark," or point of reference, by which to set up another staff. It would be necessary in doing this to make a sketch of the place, giving the location of the staff and the point of reference; noting the local names of the surrounding points so that any other person could find the place from the description.

62. Observers, in publishing their local river-reports, will give, in addition to the changes in past twenty-four hours, the height of water above or below some fixed point known and used by steamboat-men and other interested parties.

63. The river observations must be made and reported with as much care, regularity, and accuracy as those of the barometer, and where the observer is compelled by pressure of other duties to intrust this part of his work to an assistant, he must assure himself by frequent personal inspection that it is faithfully and honestly done.

SIGNAL APPARATUS.

64. Stations ordered to display cautionary signals will be supplied with two (or more) red flags, one 6 feet and the other 8 feet square, having square *black* centers one-third the size of the flag; one red signal-lantern; one large flag-staff, and two sets of small staffs for use in cases of emergency. The large flag-staff must be from 25 to 30 feet in height, and so situated as to be clearly visible from as large a part as possible of the harbor and shipping it is designed to warn of approaching danger. The staff will be provided with halyards for raising and lowering the flags and lantern, and will be erected on the roof of some building, preferably on the one in which the office is located, unless a more desirable position is found near the office.

Everything connected with the signal apparatus must be kept in perfect order; flags mended when torn, ties sewed on, halyards renewed, lanterns constantly filled and trimmed, and the approaches to the staff convenient so that there may be no delay in obeying all orders to hoist or lower signals.

65. Timely requisition must be made upon this office for new articles of equipment when those in use are likely to become unserviceable.

SIGNAL-ORDERS.

66. Signals will be ordered up by telegraph from this office in the words "Up signals," and will be ordered down in the words "Signals down." Signals will remain displayed until the order to lower them is received from this office, unless telegraphic communica-

Digitized by Google

tion with the office is interrupted and continues so for some hours after the storm has passed, in which case the signal will be lowered when the danger is over. Extreme caution must be exercised in this respect, in order not to mistake the customary lull in the center of a storm for an indication that it has passed over.

Observers must not, under any circumstances, hoist or display cautionary signals without authority from this office.

67. Observers must immediately acknowledge by telegraph the receipt of all signal-orders, giving name of station, nature of order, and time of receipt. These acknowledgments will be addressed to the Chief Signal-Officer, and signed by the observer or assistant receiving the order. The following examples will illustrate the form of message to be used:

(1.)

CHIEF SIGNAL-OFFICER, *Washington:*

Chicago—Up Signals received ten-forty a. m.

KAUFMAN,
Observer.

(2.)

CHIEF SIGNAL-OFFICER, *Washington:*

Detroit—Signals Down received six-fifty p. m.

FINN,
Observer.

68. At the end of each week a report, made out on Form 23, will be forwarded in the same envelope with the other weekly reports. This report will be forwarded regularly, whether orders have been received or not during the week.

The hours of duty will be so arranged at cautionary stations that one man will be in the office constantly, in readiness to obey signal-orders.

RECRUITING FLAG.

69. Each station will be furnished with one United States recruiting flag, for display on special occasions as ordered from this office. At cautionary stations it will be displayed on the signal flag-staff, and at other stations a cheap staff, 12 or 15 feet in length, will be procured for this purpose, and so arranged that it can be put up and taken down at pleasure.

MAP AND BULLETIN FRAMES.

70. Frames for the proper display of maps and bulletins will be furnished by this office, and will not be purchased by the observers without special authority.

FORMS.

71. The following-named forms will be furnished by this office for station use:

Form 1.—Telegraphic river-report.
Form 2.—Receiving-sheet.
Form 3.—Daily bulletin.
Form 4.—Weekly report.
Form 5.—Telegraphic report.
Form 6.—Receipt for property.
Form 8.—Weather-map.
Form 15.—Synopsis.
Form 16.—Monthly chart.
Form 19.—Error-sheet.
Form 22.—Monthly mean.
Form 23.—Cautionary-signal blank.
Form 24.—Record of bulletins.
Form 25.—Telegraphic form.
Form 26.—River-bulletin.
Form 27.—Special river-report.
Form 28.—Regular weekly river-report.
Form 30.—Weekly instruction-report.
Form 31.—Weekly report, temperature of water.

Digitized by Google

Form A.—Record of telegrams refused by telegraph companies.

Form B.—Record of telegrams sent and received.

72. Form 1 is used by the special river-observers for their reports, which should be made in duplicate; one copy for file in the telegraph-office at the schedule times and the other to be forwarded to this office at the end of each week.

73. Form 2 is for the use of the telegraph-operators in receiving the reports from other stations, and will be furnished by the observers in such quantities as may be required, care being taken to guard against wasteful and unnecessary use. The spaces will be filled up in regular order, commencing at the upper left-hand space and filling each space to the right in succession on the first line, and then commencing at the left-hand space of the second line, and so on until each space is filled. Observers will require the receiving operators to sign and date each sheet, and also to note the time the reports upon it were received, before taking it from the telegraph-office. When the reports are received in duplicate by the operator, observers will retain the original sheets furnished them by this office.

After the reports are transferred to the bulletin the receiving sheets for each full report will be placed together and folded neatly in three folds parallel with the writing.

Each morning the three reports of the preceding day will be secured together so as to form a single package. At the end of each week the seven daily packages of the week will be put up in a neat package and forwarded by mail to this office, accompanied by the error-sheet.

74. Form 3 is the Daily Bulletin, issued for public information. The several columns will be filled up from the receiving sheet, the words and figures being written plainly and distinctly.

Before making any entries upon the manifold form, the sheets will be carefully smoothed down so that the registered lines of the several stations will fall directly over each other. If more than fifteen bulletins are to be written it is better to make out the number in two equal parts than to try and write them all at once, in order that the copies may all be legible.

One copy of the morning issue of the Saturday Bulletin will be mailed to this office from each station.

The headings of the different columns indicate with sufficient clearness the matter to be filled in.

When any part of a report is not received, or, if received, is evidently incorrect, the word "blank" will be written in the spaces to be filled by such part.

Absence of wind, pressure of wind, clouds, rain-fall, or change in barometer, thermometer, and river, will be indicated by the figure zero.

New stations, whose names are not in the printed list, will be written in the blank lines at bottom of the form.

The following data will be given on all Forms 3 posted:

"Posted in.....

at..... M .....

(Signed).....

Observer."

In the first blank space will be written the name of the locality where posted; in the second space, the *time;* and in the third space, the *date* of posting.

Each bulletin will be signed with the full name of the observer.

75. Form 4 is the weekly report, and three copies will be forwarded to this office at the end of each week; one copy containing the full record of the telegraphic series of observations, one the record of the local series, and the third that of the mid-day observations. In filling up this form the *daily* means of the *local* (7.2 and 9 o'clock) and the *weekly* means of the *telegraphic* barometric and thermometric observations will be entered in their proper columns, and the words "daily" and "weekly" respectively added to the heading.

In the telegraphic series will be given, firstly, the mean of the morning; secondly, that of the afternoon; and thirdly, that of the midnight observations.

76. Form 5 will be used for all of the telegraphic reports, and will be made out each time in duplicate, one copy for deposit in the telegraph-office, for transmission by telegraph to this office, and the other for transmission by mail to the same place. Both copies must be filled up and signed in the manner indicated upon the form itself.

Each regular report will consist of *ten* words, arranged in two lines of *five* words each. At all stations designated by this office as *river* stations, the afternoon report will consist of *twelve* words, arranged in two lines of *six* words each.

The sixth space in first line of Form 5 will be used for the depth in feet above or below the established bench-mark whenever it exceeds eight feet, and the sixth space in second line for the odd inches.

Digitized by Google

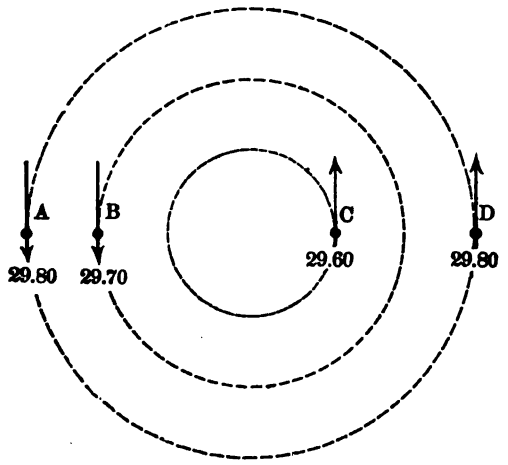
Whenever the depth does not exceed eight feet, the word "River" will be used to fill the space in first line, and the whole depth given in the second line in inches.

In furnishing the reports to the press, and in filling up the bulletin, Form 3, the daily change only will be given, as at present. This change will be obtained by taking the difference between the current report and that of the preceding day.

In filling up the form, the first space of the first line will be used for *name of station*, the second for *date* and *time* of report, the third for barometer, the fourth for thermometer, and the fifth for humidity. In the second line the first space will be used for state of weather, the second for velocity of wind, the third for upper clouds, the fourth for lower clouds, and the fifth for rain-fall. The cipher-words must, in all cases, be written plainly and correctly. The word "Blank" will be used when, from any cause, an observation is not taken.

The duplicate copies of the report for each day will be mailed weekly to this office from all stations.

77. Form 6 is a memorandum-receipt for property, and will be filled up with the number and kind of articles received, signed, dated, and transmitted promptly to this office.



Detailed instructions in reference to this form will be given under the head of "Property."

78. Form 8 is the weather-map, to be printed or made out in manifold, as may be directed from this office, and shows the direction of the wind, state of weather, height of barometer, height of thermometer, and velocity of wind at each station. The arrow is always to fly *with* the wind, and *not toward* it like a vane. In printing or stamping these maps great care must be exercised to make the figures and different signs correctly and distinctly. Observers must never allow imperfect or illegible maps to leave their offices. To insure accuracy, the printed maps, before being issued, must be carefully compared with the reports received, and, if errors are found, they will be corrected on the map, if the corrections can be made without disfiguring it, and without rendering it illegible. If they cannot be so corrected, the whole edition will be destroyed, as it is better not to issue any map than one which is imperfect. One copy of this map will be sent to this office on Saturday of each week, unless special instructions are received to the contrary by the observer from proper authority.

79. Observers are authorized to trace upon these maps *isobars* or lines of equal barometric pressure, in accordance with the following directions:

1st. Ascertain by a general examination of the reports, after they are entered on the map, whether any of the lines of equal pressure will, when drawn, traverse a large portion of the map, and, if this is found to be the case, these long lines will be drawn first. The lines of 29.90, 30.00, and 30.10, on the map, opposite page 12 of the circular issued by this office, on the Practical Use of Meteorological Reports and Weather-Maps, are illustrations of this principal isobar or *base-line*.

2d. If decided differences in barometric readings are observed to exist between neighboring stations, enter upon the map with a red lead-pencil little dots or dashes, intermediate between any two of them, to represent the points at which the barometric

reading would be exactly 29.50, 29.60, &c., or 30.00, 30.10, &c., supposing the pressure to change uniformly in the space between the two stations. The precise position of these intermediate points can usually be found with sufficient exactness by estimation with the eye.

Digitized by Google

The interpolated isobars—that is, those which are drawn between stations, as in the preceding paragraph—cannot be relied upon as perfectly accurate, but the amount of error need not exceed two-hundredths of an inch in the position of any one line, if proper attention is paid to the following points: *First.* The isobars must not be extended west of the one hundredth degree of longitude west of Greenwich, (or the meridian twenty-three degrees west of Washington,) as the barometric readings of very elevated stations cannot at present be combined with those of an altitude of fifteen hundred feet or less. *Second.* The barometrical readings reported from Mount Washington must not be used in drawing the isobars over the New England States. *Third.* Certain allowances or corrections must be made for the readings reported from several stations whose elevation is not yet accurately determined. These corrections will be furnished from this office upon application.

When a sufficient number of dots or dashes have been made to enable the observer to trace the course of one or two of the principal isobars, they will be joined together by a curved line passing through, or nearly through, all of them, without following any of the minor irregularities that would be possibly caused by slight errors in the interpolations.

Any perplexity that may arise in drawing these lines, as to their proper route, may generally be removed by considering the direction of the wind, as reported from each station. Thus, if from stations A, B, C, and D reports are received as shown in the figure, it would be seen at once that between B and C there was a central area of low pressure around which the wind circulated in the direction indicated by the arrows, and the isobars would therefore be drawn as shown by the dotted lines.

When the lines are very much crowded together, as happens in a few severe storms, the isobars may be drawn for every two-tenths of an inch, instead of every one-tenth.

Each isobar should be plainly marked at its extremities with the figures indicating the corresponding pressure, and the central areas of highest and lowest pressure should be marked "high" and "low," respectively, unless by so doing the appearance of the map would be injured by the complication of the lines.

When the observer has any doubt as to the course of a given isobar, he should omit it entirely, or simply indicate its probable position by a broken instead of a full red line. Observers will forward to this office weekly examples of their isobaric maps, and will not post them in any public place until officially authorized to do so.

80. Form 15 is for the Synopsis and Probabilities, and a copy properly filled will be posted with each bulletin at all stations where they are received. The midnight synopsis will be used with the morning bulletin, and the morning synopsis with the afternoon bulletin, whenever practicable. At stations where the afternoon and not the midnight synopsis is received, this will be used with the bulletin of the next morning.

In all cases the time and date of issue from Washington must be plainly written upon the form.

81. When observers are compelled to copy reports from the newspapers, and time and date are not given, they will call the especial attention of the publishers of such papers to the omission and have it corrected, when possible, as a matter of justice to this office and to their readers.

82. Form 16 is the blank meteorological chart to be made out monthly at each station, and forwarded by mail to this office as soon after the close of each month as practicable.

The following instructions, taken in connection with the illustration given in the annual report of the Chief Signal-Officer for 1871, will enable observers to make them out properly:

For the thermometer, take the weekly reports on Form 4, beginning with the morning report of the first day of the month; with a sharp pencil make a dot on the chart at the height at which the dry-bulb thermometer stood at 7 a. m., (or the first observation,) at its 7. a. m. relative distance from the 12 m. line, as shown in the illustration referred to. Do the same with each of the six observations. Join these dots with the pencil and afterwards trace with ink.

Continue the same way with the wet-bulb thermometer, barometer, velocity of the wind, and the relative humidity, marking the direction of the wind in small letters opposite each observation.

The average amount of clouds for each day will be given in the spaces immediately above the 29.00 inch line in the chart dividing the squares into 1, 2, 3, and 4-4ths, respectively.

The dark lines for rain are placed with the right edge at the point where the rain ceased.

The scale may be changed for a greater fall of rain than 1¼ inches, or a greater velocity of wind than thirty-five miles per hour.

Different colored ink may be used for the several lines, if preferred.

In forwarding these charts by mail they should never be folded, but rolled neatly and compactly without any central core. As they are intended for future reference care should be taken in making them out accurately and neatly.

Digitized by Google

83. Form 19 is the error-sheet, which accompanies the weekly packages of Form 2 sent by observers to this office. It will be filled up in the following manner:

In the third column will be entered the official numbers of all regular reports missing when the telegraphic circuits are closed. In the fourth, fifth, and sixth columns will be entered, on the same line under appropriate headings, the numbers of all reports of previous dates which may have been received during the time designated at the left-hand of the form. In the seventh column the time the last report was received will be noted. Receipt of duplicates, corrections, and reports not in schedules, causes of delay, &c., will be noted in the column headed "Remarks." The number of words must include all reports due at the station which may have been received up to the time the circuits were closed, whether they were of the current or previous dates. Duplicates and corrections are not to be counted. *Each line of the form must contain a complete record of the work for the date and time specified.* The record will be made up from Form 2 immediately after each report.

84. In filling up Forms 19 and B, the following-named stations will be designated by the letters placed opposite each name:

Booneville.....A.	Lexington.....K.
Brownsville.....B.	Little Rock.....L.
Brunswick.....C.	Marietta.....M.
Confluence.....D.	Morgantown.....N.
Evansville.....E.	New Geneva.....O.
Freeport.....F.	Oil City.....P.
Hermann.....G.	Paducah.....Q.
Jefferson City.....H.	Plattsmouth.....R.
Kansas City.....I.	Saint Joseph.....S.
Le Claire.....J.	Warsaw.....T.

85. Form 22 is used for the record of the daily and monthly means of the barometer and thermometer, with the prevailing direction of the wind and amount of rain-fall for the month. In filling up this form the means of the barometer and thermometer for the local series of observations will be obtained by dividing the sum of the 7 a. m., 2 p. m., and *double* the 9 p. m. observations, by four. Manifold copies of this form, properly filled up, will, at the end of each month, be furnished by observers to as many of the newspapers and other periodicals published at their stations as may desire to make use of it. One copy will also be forwarded to this office on the first day of the month succeeding that of which it forms the record.

86. Each observer will rule out, on heavy white paper, a blank form similar to the one given below, and post it up in a conspicuous place in his office. On this form he will enter, on the first day of each month, the data for the preceding month indicated at the top of the several columns in the form.

87. The weekly mean of the telegraphic observations of the barometer and thermometer will be obtained in the following manner: Divide the sum of the a. m. telegraphic observations by the number of observations, and the quotient will be the mean of the morning observations; proceed in the same manner for the afternoon and night observations, and enter the quotients separately under the head of "Remarks," on Form 4.

The monthly mean of the telegraphic observations will be obtained in the same manner.

The local observations made at 7 a. m., 2 p. m., and 9 p. m. will not be used in getting this mean.

ILLUSTRATIONS.

Barometer; telegraphic observations, 7.35 a. m., 4.35 p. m., and 11.35 p. m., Washington mean time.

30.6	43.8	36.5

Mean of a. m. observation 30.6
Mean of p. m. observation 43 8
Mean of midnight observation 36 5

88. In calculating the mean of the thermometer readings at low temperature, the following rule will be observed:

"When minus readings occur, the difference between the sum of the positive and the sum of the negative numbers is to be taken. This difference, which is the total sum, has the sign of the greater of the two partial sums, and will be divided by the total number of observations."

The quotient obtained by this division will be the mean sought.

The following are examples:

Example 1.

	+ 70
	+ 50
	+ 20
	0
Sum of positive	+ 140
Sum of negative	0
Total sum	+ 140
Number of observations	4
Mean	+ 35

Total sum	− 5
Number of observations	6
Mean	− 0.8

89. Form 23 is for use at stations designated for the display of cautionary signals, and will be filled up and forwarded weekly to this office during the period signals are ordered. Under the head of "Remarks" will be recorded the highest velocity reached by the wind during the time the signals were displayed.

When no signals have been ordered during the week, this form must be forwarded and show, under the head of "Remarks," the highest velocity attained by the wind during the week.

Form 24 is the weekly report of the number of bulletins, maps, &c., issued at each station, and will be forwarded to this office in the same envelope with the other regular weekly reports.

All publications that have been issued at any station during each week will be reported on this form, and if special publications are made in addition to those noted in the heading of the several columns of the form, observers will rule additional columns for such publications.

90. Form 25 is the one upon which all official telegrams to this office must be written. As everything transmitted is charged for, unnecessary words must be avoided. The full date and time of filing message will be written *above* the upper heavy line, while only the name of the city and the day of the month will be written below. The signature must contain only the surname of the sender and the word "Observer." Only the matter written between the heavy lines is to be transmitted.

91. Form "A" will be filled up properly and carefully under each heading, and mailed on Monday of each week to this office. In the column headed "Nature of message," will be indicated *briefly* whether the message rendered was a weather-report or ordinary message, and in the column of "Remarks" give such additional information as you may think necessary to a full understanding of each case.

This form will be sent in blank if no messages have been refused.

92. Form "B" will be forwarded promptly to this office at the end of each week, using but one form, except in cases where it is necessary to use more to complete the record, taking great care to keep a correct record of number of telegrams sent or received. In case there should have been no telegrams received or sent during the week, the form will be sent in blank. All telegrams must be properly dated and signed.

BOOKS OF REFERENCE AND RECORD.

93. The following books of reference and record will be furnished by this office to each station:

For reference.—Guyot's Meteorological Tables; Buchan's Handy Book of Meteorology; Loomis's Treatise on Meteorology; Myer's Manual of Signals; Piddington's Horn Book; Manual of Military Telegraphy; Annual Reports of the Chief Signal-Officer; Practical Use of Meteorological Reports and Weather-Maps; Instructions to Observer-Sergeants, Signal-Service, U. S. A.; Smithsonian Directions for Meteorological Observations.

For Records.—Journal; Daily Record of Observations; Record of Bulletins; Record of Letters Sent; Record of Letters Received; Index to Letters Sent and Received; Original Record of Observations; Weather-Map of the United States.

94. In the journal will be entered daily all matters of interest not provided for in the various forms, such as meteoric and auroral displays, earthquakes, and unusual atmospheric appearances and disturbances, giving in all cases, when possible, the time of beginning and duration of each. Especially will the observer enter a detailed account of the characteristic phenomena of every serious storm that passes over or near his station. In this book will also be noted all changes in location of office or instruments, the condition of the instruments, and when damaged in any way the cause will be stated. A monthly abstract of the entries in the journal will be forwarded to the Chief Signal-Officer within five days after the expiration of each month. This abstract must contain all the important entries of the journal, the condition of all in-

Digitized by Google

struments in use on station, and also the comparative readings of the barometer referred to in paragraph 31.

95. Observer-sergeants will be particular to note every display of aurora, seeking by inquiry of others, if necessary, to make their record complete.

If the heavens are obscured by clouds so that the aurora, if present, cannot be observed, the word "obscured" will be entered in that part of the record devoted to auroral displays. If the sky is sufficiently clear for observation, the words "aurora" or "no aurora" will be entered according as one is visible or not. When observed, a full account of the phenomenon will be entered in the journal, showing the exact minute of beginning and ending of the aurora, and the principal phases of changes that it experiences. The following particulars should be especially noted: the azimuth and altitude of each extremity and of the crown of any arch of light, and the same data for any corona or glory that may be formed.

When the observer is familiar with the names of the principal fixed stars, he may locate the arch or crown by reference to them, but it is preferable that he should observe directly the altitude and azimuth.

Altitudes are expressed by degrees from the horizon to the zenith. If any circle be divided into the 360 parts and radial lines connect these parts with the center, each pair of lines subtend an angle of one degree; the fourth part of the circle will subtend an angle of ninety degrees or one right angle, and the corresponding radii are perpendicular to each other; thus the zenith (that point in the heavens immediately above the observer) is ninety degrees from the horizon, or, in other words, its altitude is 90°.

A point half way up from the horizon to the zenith has an altitude of 45°.

Azimuths are also expressed in degrees but are measured on the horizontal plane, and will be recorded as is done in astronomy, from the south point to the westward, passing successively the west, north, and east points of compass until 360° have been passed over and the south point is again reached.

Observers must be particular as to the date of the aurora, and when it begins in the evening of one day and continues into the early morning of the next day, it will be entered as occuring on the *first* day, but its details will be given in the record as occurring between the hours of its actual beginning and ending. Thus, an aurora that began on the evening of the 12th of January, and continued until the early morning of the 13th, would be entered as the aurora of the 12th, but its details would be recorded as occurring, for instance, between the hours of 10 p. m. of January 12, and 2 a. m. of January 13.

All entries in the journal of occurrences and observations of any one day will be made under or opposite to that day, and not be entered as a subsequent date as is frequently done. For example: an auroral display ocurring May 23, should be entered opposite that date, and not referred to on the 24th, as having occured "last evening."

Observers must pay particular attention to accuracy in the use of the terms "morning" and "evening," and will be governed by the following instructions in reference to them:

Midnight is the moment 12h. 00m. 00s., and is the beginning or first moment of the new day and should receive the date of that day. Thus, whatever happened in the afternoon of June 10, at 11h. 59m. 59s. happened at 11h. 59m. 59s. p. m., June 10; whatever happened one second later was at midnight of June 10 and 11, and at one second later still at 12h. 00m. 01s. a. m. of June 11; at midday of same date whatever happened at 11h. 59m. 59s. happened at 11h. 59m. 59s. a. m., June 11; at one second later it was noon June 11; at one second later still it was 12h. 00m. 01s. p. m., June 11.

96. The daily record of observations will be an exact copy of Form 4, and filled up in the same manner. The several series of observations can be entered in the same book, care being taken to date and time them properly. The telegraphic series may be entered in the beginning of the book, and the local series at the end, while the midday reports may follow either of the two.

97. The record of bulletins will be filled up regularly from the daily bulletins, of which it is a copy.

On stations where telegraphic reports from other stations are not received, or where such reports do not exceed nine in number, a whole page in the bulletin-book will *not* be used in entering each bulletin. To economize space, the reports will be entered in the same order as at present, but as many days will be written upon each double page as the space will allow; each day being distinguished by a proper heading as to date, and separated from the preceding one by a red-ink line.

Wherever necessary, the printed names of stations will be ruled out, and those from which reports are received written in red ink, in the blank spaces between the original names, and in regular order.

98. In the books of "Letters sent" and "Letters received" will be entered all letters sent, and an abstract of all those received relating to the official business of the station. The original letters received will be properly briefed and numbered, and filed away for reference. In the book of "Letters received" will be entered a record of all official letters and telegrams received at the station.

99. All communications on letter-paper will be folded in three equal parts from the

Digitized by Google

bottom to the top; and if written on different sized paper, will be folded in such manner as to conform to the above size. All communications will be entered in the order of their receipt and numbered continuously, beginning at one on January 1 of each year, (or at the date of the receipt of the first letter, when a station is opened during the year,) and each letter will be known by this number in all references made to it in the office-records. Inclosures to letters will not be indorsed, but simply numbered, in red ink, as "Inclosure No.—" to said letter. On the top of the first fold will be entered, in red ink, the number of the letter, the station, and the year. This will be followed by the following entries in black ink:

1st. The place where written and date.

2d. Name and official designation of writer or department or office from which it is written.

3d. A brief synopsis showing the general purport of the letter. In this synopsis or brief everything of importance in the letter will be concisely stated.

Following this will be given in red ink the number of inclosures if any, in the letter, and such references as may be necessary to show where other letters connected with it can be found in the records. At the bottom also in red ink the date at which the communication is received will be entered, (see Examples A and B.) If the communication is received by telegraph the word "telegram" will be written in red ink immediately below the brief.

The following illustration shows the manner of entering letters in the record:

LETTERS RECEIVED.

When received.	Name of writer.	Date and purport of letter.
April 17, 1873 **90**	Office Chief Signal-Officer, by First Lieut. H. Jackson.	Washington, April 12, 1873, directs that one stylus, dropped from return for 1st qr., be taken up and correction made on retained copy. **Retained return corrected April 17, 1873.** **(Number of letter and indorsed action in red ink.)**
April 19, 1873 **94**	Office Chief Signal-Officer, by Capt. H. W. Howgate. **(One inclosure.)**	Washington, April 12, 1873, directs that a weather-map be daily furnished to James R. Stone, Racine, Wis., as requested by Louis Decker. **Delivery of map commenced April 20, 1873.** **See L. S., Vol. 1, page 59.**

One or more lines will always be left below the brief for noting, as shown in the illustration, any action taken in consequence of said letter, as well as the entry-marks of any letters, either received or sent, especially connected with it. In these references letters received are referred to by number and year, and letters sent, by volume and page.

In case the letter received is to be returned with an indorsement, such indorsement will be entered in full in the space immediately below the brief, and two additional lines will then be left in which to note any future action.

LETTERS SENT.

In this book will be entered all communications sent from the office by letter or telegram, excepting only such indorsements as are entered in "Letters received," in accordance with the instructions contained in the preceding paragraph. All proper names appearing in the body of the letter will be underlined with red ink. In the margin will be given in red ink the entry-marks of any letter, either received or sent in connection therewith, letters received being referred to by number and year, letters sent by volume and page. Exact copies of all telegrams sent will be entered in full, and marked "Telegram" in red ink. The following illustration of the manner of entering letters sent will show the manner in which the several notes are made. [The words and figures in brackets indicate red ink.]

[6] [LETTERS SENT.] [59]

"MILWAUKEE, WIS., *May* 3, 1873.

"To the CHIEF SIGNAL-OFFICER OF THE ARMY:

"GENERAL: I have to advise you that I am verbally informed by Mr. Louis Decker that Mr. J. R. Stone, of Racine, Wis., has removed to Oregon, and that in consequence I have this day discontinued the map ordered by communication from your office under date of April 12, 1873.

[L. R. 94. Milwaukee, 1873.]

"I am, respectfully, yours,

"H. M. LUDWIG,

"*Observer-Sergeant, Signal-Service, U. S. A.*"

NOTE.—In case any other letters had passed in this connection, the entry-marks would be entered in the margin.

Digitized by Google

In letters received, each proper name will be followed by the number of the letter in which it is to be found; if it is the written name it will be entered in black ink, otherwise in red ink. In letters sent, the proper names will be followed by the number of the page on which the letter containing the name is to be found; if it is the signature of the person writing the letter, it will be entered in black ink, otherwise in red ink. Each name will be entered but once and the numbers will follow it successively, as follows:

"Office Chief Signal-Officer, 1, 3, 4, 8, 10, &c.
"Wind-vane, 3, 10, 29.
"Wentworth, H. W., 18-24-26."

INDEXING.

The alphabetical index-book furnished the observers from this office will be kept up regularly from day to day in connection with the books of letters sent and received, and must show the names in proper order of all official correspondents of the observer, with references to volume and page where their communications appear.

General orders, special orders, and circulars, will be filed away separately, and in such manner that they can be found readily, and will be roughly bound by the observer at the end of each year. General orders and circulars will be indorsed in red ink at the bottom of the first page, with the name of station and date of receipt, as follows:

"Received (Milwaukee,) ————, 187—."

Spare maps and bulletins will be neatly folded in letter size and tied up in packages containing a month's issue and filed away where they will be easily accessible.

Example A.

WAR DEPARTMENT, OFFICE OF THE CHIEF SIGNAL-OFFICER,
DIVISION OF TELEGRAMS AND REPORTS
FOR THE BENEFIT OF COMMERCE AND AGRICULTURE,
Washington, D. C., April 12, 1873.

Observer-Sergeant H. M. LUDWIG, U. S. A.,
Milwaukee, Wis.:

SERGEANT: Inclosed herewith is a copy of a letter from Louis Decker requesting that a weather-map be daily furnished to Mr. James R. Stone, Racine, Wis. You will place Mr. Stone's name upon your list and comply with his request.

Very respectfully, &c.,

H. W. HOWGATE,
Second Lieut. and Bvt. Capt., U. S. A., A. S. O. and Assistant.

94. MILWAUKEE. 1873.

WASHINGTON, April 12, 187.

Office of Chief Signal-Officer,

by

Capt. H. W. Howgate.

Directs that a weather-map be daily furnished to Mr. J. R. Stone, Racine, Wis., as requested by Mr. Louis Decker.

(One Inclosure.)

See L. S., Vol. 1, page 59.

Received Milwaukee, Apr. 19, 1873.

Digitized by Google

Explanation.

All office marks in red ink, brief in black ink. "L. S., vol. 1, page 59," refers to letter subsequently written in regard to this map.

Example B.

WAR DEPARTMENT, OFFICE OF THE CHIEF SIGNAL-OFFICER,
DIVISION OF TELEGRAMS AND REPORTS
FOR THE BENEFIT OF COMMERCE AND AGRICULTURE,
Washington, D. C., April 12, 1873.

Observer-Sergeant H. M. LUDWIG,
Milwaukee, Wis.:

SERGEANT: I have to inform you that one stylus dropped by you from your property return for first quarter, 1873, must be taken up until inspected and condemned by proper authority. You will make the necessary correction in the retained property-return for that quarter.

Respectfully, yours,

H. JACKSON,
First Lieut. Seventh Cav., P. & D. O.

90. MILWAUKEE. 1873.

WASHINGTON, April 12, 1873.

Office of Chief Signal-Officer,

by

1 Lt. Henry Jackson.

Directs that one stylus, dropped from return for 1st Qr., '73, be taken up and correction made on retained copy.

Received April 17, 1873.

(Copy.)

MILWAUKEE, WIS., *April* 9, 1873.

To the CHIEF SIGNAL-OFFICER OF THE ARMY:

SIR: I have the honor to request that the observer-sergeant in charge of the station in this city be directed to furnish a weather-map daily to Mr. James R. Stone, Racine, Wis.

Respectfully, yours,

LOUIS DECKER.

94. MILWAUKEE. 1873.

(In red ink.)

Inclosure No. 1.

(In red ink.)

Digitized by Google

Letters transmitting checks for pay of observers are not merely personal, but must be carefully entered and preserved.

The receipts for pay should be copied in "Letters sent." Great care should be taken to specify the amount of any bills forwarded in a letter, and also to note the date of all payments, under the brief of the letter, in the record-book containing the remittance.

100. The large weather-map of the United States will be hung up in the principal room of the board of trade, or chamber of commerce, or both, and the state of the weather will be shown upon it in the manner already described, as soon after the receipt of the morning report as is practicable.

101. All books of reference and record must have the name of the station to which they belong plainly written on the fly-leaf.

GENERAL INSTRUCTIONS.

102. Each observer in charge of a station not supplied with an assistant from this office will, as soon as practicable after arriving at his station, make arrangements with some competent person to perform his duties in case of sickness or disability. The person so selected must be carefully instructed in the use and care of the several instruments, in the manner of taking the observations, of making out and forwarding the weather-reports sent from the station, and the proper disposition of those received from other stations. His name and regular post-office address will be reported to this office as soon as the selection is made. The employment of this assistant will be temporary only, and he will be paid at the end of each month in which the services were rendered, at the rate of compensation fixed by the Chief Signal-Officer, on forwarding the proper vouchers to this office, with a certificate from the observer-sergeant stating the number of days employed, with the dates in each case.

103. In case of sickness or disability rendering an observer or assistant observer incapable of performing his duties, the observer in charge will report the fact by telegraph to the Chief Signal-Officer, and will forward by mail the certificate of his attending physician.

104. At stations where there is no medical officer a resident practitioner will be employed, whose account, made out in duplicate, on the form given below, together with the prescriptions when medicines have been required, will be transmitted for payment to the Surgeon-General of the Army, through the office of the Chief Signal-Officer, Washington, D. C.

105. No account of a resident practitioner other than a medical officer of the Army at any of the stations mentioned can be paid unless it shall clearly appear that the assistance of the medical officer designated could not be obtained in the special case. Should the medical officer be temporarily inaccessible upon the occurrence of a case so sudden and serious as to require immediate attention, he will nevertheless be called upon as soon as possible, and his certificate that the case required another practitioner to be employed under the circumstances will be necessary before the account of the latter can be paid.

106. An enlisted man obtaining medical assistance or medicines from other sources than a medical officer of the Army, when the latter can be called upon, will be personally responsible for the account therefor, such not being authorized by the United States.

107. Bills for articles of food, or diet of any kind, liquors, wines, mineral waters, patent or proprietary medicines; instruments or appliances, such as syringes, trusses, or suspensory bandages, will not be allowed by the Medical Department.

108. When the services of a nurse are necessary, a separate bill for the nursing will be made and certified in the same manner as that for medical attendance.

The UNITED STATES,

To ——— ———, M. D., DR.

For medical attendance furnished to ——— ———, suffering from ——— at ——— from ——— to ——— ..... $———

For medicines as per accompanying prescriptions ..... ———

———

I certify that the above account is correct and just; that the services were rendered as stated and were necessary; and that the charges do not exceed those customary at this place.

———— ————, *M. D.*

Subscribed and sworn to before me this — day of ———, 187–.

———— ————,

————— ————.

Digitized by Google

I certify that the above account is correct and just; that the services were rendered as stated, and were necessary; that I was on duty at ————, and could not secure attendance from a medical officer of the Army.

————— ————,
Observer-Sergeant, Signal-Service, U. S. A.

Sworn to and subscribed before me this — day of ——, 187–.

————— ————,
————— ——— ——.

Approved:

————— ————,
Brig. Gen. (Bvt. Ass'g'd) and Chief Signal-Officer of the Army.

When the attendance has been to an assistant the form will be altered accordingly, and the account forwarded through the sergeant in charge, who will indorse his remarks upon it, and inclose in letter of transmittal to this office.

109. At stations where there is a medical officer of the Army on duty, observers will be duly notified and provided with authority to call upon him for medical assistance. When medicines are not furnished directly by the Medical Department, but through a druggist, on the prescription of a medical officer, and the bill of the druggist is presented to the patient, that bill in duplicate, approved by the medical officer and receipted, will be attached to an account made out in the name of the patient, the above form being altered according to the facts, and the only sworn certificate necessary being that of the patient.

110. At all stations where there is a private soldier on duty as an assistant, the observer-sergeant in charge will give especial attention to his instruction in the theory as well as the practice of meteorology, signaling, and telegraphy.

In order that this may be properly done, the sergeant will require his assistant to give a recitation each week from one of the following-named text-books, going through them in the order given: Loomis's Treatise on Meteorology, Myer's Manual of Signals, Manual of Military Telegraphy, and the Instructions to Observer-Sergeants. The assistants will be required to understand thoroughly the first six chapters of Loomis, the Manual of Signals to page 96, and all of the other text-books, until satisfied that the subject is thoroughly understood, or that the assistant is wanting in capacity to understand it.

The ordinary station-work will be fully explained, and the reasons for each instrumental correction given in detail. A brief weekly report will be made to this office, showing the nature of the instruction given and progress made during that period.

The character of recitations will be stated each week on Form 30, under the head of remarks.

This duty must be carefully and faithfully performed, in order that worthy men may receive the promotion due them, and unworthy ones be disposed of.

No application from assistant observers for promotion to the grade of sergeant will be favorably considered until this course of instruction has been completed in a satisfactory manner, and is so reported by the observer in charge.

111. Assistants on duty as printers will be required to make the same recitations as other assistants, and will be borne on the weekly return in the same manner.

112. In the absence of serious special reasons or exigencies of the service, no applications for examination before the board of examiners at this office for promotion to the grade of sergeant will be favorably considered, except when made by enlisted men of the Signal-Service Detachment, United States Army, who shall have performed satisfactorily the duty of assistant to an observer-sergeant on station, or similar duty at this office, for a period of six months, and have after recall from station gone through the regular course of instruction at Fort Whipple. Such applications, by men on duty as assistants, must be made in writing, through the observer-sergeant in charge of station, (who will in all cases indorse his report of the character, habits, and ability of the applicant,) and will be acted upon by the board when vacancies exist in the authorized number of observer-sergeants.

113. The publication of the Government weather-reports by newspapers must be done without expense to the United States.

114. In reference to the issue of weather-maps, observers at stations where they are issued must bear in mind that these maps are printed for gratuitous distribution, and neither money nor other form of compensation will be charged or received for them by any observer-sergeant or assistant observer, or their agents, either for the maps themselves or for their delivery, except when such delivery is made through the post-office at the request of the parties to whom they are addressed. In such cases the parties wishing to be supplied with maps will be required to furnish the observer sufficient money for the prepayment of postage upon them at the rate of one cent per copy. Observers must keep a careful account of all moneys received by them for this purpose, and make a weekly report of the same to this office, stating the name of the par-

Digitized by Google

ties and amount received from each, and the number of maps furnished during the week to each person.

115. The publication and distribution of weather-maps constitute only a part of the regular daily duty of each observer, and while they are expected to devote a liberal amount of time to this work, it must not be done to the prejudice of their other duties.

116. For the purpose of systematizing the distribution of maps, observers will divide the territory to be traversed into as many districts as there are assistants on duty at their respective stations. The boundaries of the district assigned to each assistant must be clearly defined; the time required to traverse it ascertained by the observer by actual trial, and the places for the delivery of each map distinctly pointed out to the assistant. Within the limits of these districts maps will be delivered regularly at the places and to the persons designated by this office, and to those selected by the observer with the approval of the chairman of the meteorological committee. Weekly reports will be made to this office of all additions to the lists of persons and places so selected.

117. All applications for maps from parties living beyond the district limits, referred to in the preceding paragraph, will be forwarded to this office for action, and if approved, maps will be furnished on personal application at the observer's office, or through the mail, as provided for in the first paragraph. This information will be posted up in the office of each observer printing and distributing maps.

118. Observers will select such places for posting the daily weather-bulletins and maps as will insure their widest publicity at all hours of the day and night, and will report the names and locations of the places thus selected to the Chief Signal-Officer. At the same time they will report the location of their own offices, giving name of street and number. This information will also be furnished to the manager of the telegraph-office charged with the transmission and receipt of the reports.

119. Observers must not make use of the telegraph in communicating with the central office in Washington, except in cases of the utmost importance. Where the use of the telegraph is considered unnecessary by the Chief Signal-Officer, the cost of the telegram will be charged against the observer sending it. The official form must always be used for telegraphic communications.

120. Communications to this office on official business will be written on the official size of letter-paper, inclosed in an official envelope, and directed to "The Chief Signal-Officer of the Army, Washington, D. C." The words "Official Business" will be written on the left-hand upper corner of the envelope.

121. Half sheets of paper will be used in all cases in which letters are completed on the first page. When more than one page is required a whole sheet will be used.

122. Communications written on letter-paper will be folded in three equal folds; on foolscap or legal-cap paper, in four equal folds, parallel with the ruling. Observers must not brief any official letter forwarded to this office, and must give the full names of all persons referred to.

123. All official communications received by observers, wherever serving, from parties not connected with the signal-service, will be immediately referred to this office for such action as may be considered necessary.

124. No letters containing information in reference to the signal-service will be made or sent to any person or persons by observers on station until such reports or letters have been submitted to and approved by the Chief Signal-Officer.

125. Observer-sergeants and their assistants will be especially neat and careful in their dress; and any negligence in this particular coming to the knowledge of the Chief Signal-Officer will be considered sufficient cause for the reduction of the offender to the rank of a private soldier.

126. All enlisted men on station, wherever serving, will be inspected in uniform, and inspecting officers will, in their reports, make special mention of the uniform of each man inspected, and will also make neglect of duty in connection with the uniform a subject of charges. The coat belonging to the uniform will be that described in General Order No. 92, War Department, Adjutant-General's Office, October 26, 1872. Men serving on stations may wear the forage-cap described in that order. Prompt requisition will be made for this uniform upon the property-officer of this office whenever necessary.

127. Observer-sergeants will not comprise in the same communication matters relating to different subjects, nor their meteorological observations and general details of duty, with those relating to property received or disposed of, communication or pay-vouchers, bills, or any other particular involving money or property accountability.

Letters of transmittal, application, or explanation, under these two general heads, must be written on separate sheets of paper, but may be sent in the same envelope as a matter of economy.

128. Upon the receipt of an order from this office to lower a cautionary signal that may have been displayed at any station, the observer will collect the necessary data

Digitized by Google

from mariners and others in reference to benefits, &c., derived from such display, and will report the same, together with comments that may have appeared in the papers, to this office. When the signal has not been justified the fact will be stated.

129. Observers will give close attention to the observation and record of all local premonitory signs of storms or changes of weather, and report them promptly to this office. The following points should be particularly noted: Direction and force of the wind; kind, direction, motion, and appearance of the clouds; action of the barometer and thermometer before, during, and after a storm or change of weather, and such other purely local causes as appear to influence the results.

130. The attention of observer-sergeants is directed to the fact that they are required to make their reports absolutely correct, and that any shortcoming in this respect renders them liable to punishment. Aside from this, it should be kept constantly in mind that a single incorrect report may cause the loss of life and property to an unknown amount, and all reports must be made with this responsibility clearly in view. Whenever an observer is unable from any cause to get in his report, properly corrected, at the regular hours of report, he will *not* send the uncorrected portion, but will write the word "Blank" in each of the spaces that would otherwise have been occupied by this portion of the report. Observers will *never* send any report or part of report which they have reason to believe is incorrect, and will bear in mind that it is safer and more in accordance with instructions to omit a report than to make a false one.

131. No official reports will be forwarded to this office without being carefully compared with the original records from which such reports are made. Observers having assistants will have the latter read the original matter, and the observer will check and correct the copies to be forwarded to this office, signing the reports only after he has thus assured himself of their *absolute correctness*. Special attention will be given to Form 22, and the several columns will be added up *twice*, both by the observer and assistant.

Observers without assistants will, if possible, procure some other person to assist in verifying their reports. All errors that may be discovered at the central office upon examination of the reports will be *checked* against the respective observers.

132. Upon the receipt of a circular at any station, the observer in charge will read it carefully and forward to this office a brief written synopsis of its provisions as understood by him. Where one or more assistants are on duty at a station the provisions of all circulars received will be carefully explained to each one. Whenever practicable this synopsis will be written on the margin of the printed form used to acknowledge the receipt of orders and circulars.

133. In the event of one or more instruments at a station becoming disabled and unfit for use, observers will fill up the space or spaces in the different forms intended for the readings of such instruments with the word "Blank," until they are repaired or replaced. If the instruments cannot be properly repaired at the station the observer will at once notify this office.

134. Observers are expected and required to improve themselves in the duties of their position, and are liable at any time after one year's service to be called before a board for their second regular examination.

135. On the first days of January and July (or within ten days thereafter) of each year, every observer-sergeant in charge of a station will make out and forward to this office a concise statement of the operation of his station for the preceding six months. This statement must show the changes (if any) that have been made, and the number of reports received, during that period, with the reason for such changes when known. It will also show the amount of public interest taken in the service, and the classes of citizens deriving the greatest amount of benefit from the reports. If any marked advantages to commercial or other interests have been derived from the use of the reports or display of cautionary signals, the facts in each instance will be briefly set forth.

136. Observers in charge of stations will mail, on Saturday of each week, a copy of that morning's issue of every daily newspaper published at their stations, which contain the weather-reports in any form.

137. All applications from observer-sergeants or assistant observers of the Signal-Service, United States Army, for furloughs or official privileges of any description, must be made directly to the Chief Signal-Officer of the Army.

138. The Secretary of War has power to grant discharges, which this office is authorized to promise when applied for on proper grounds, and at times when no special injury to the service would result therefrom; but as a rule no application for discharge will be favorably entertained until after two years of faithful service, and not then, except as above specified. In cases of urgent necessity such application may be made by telegraph, but in all ordinary cases will be in writing, and forwarded by mail.

139. All communications to this office from an assistant observer must be forwarded through and indorsed by the observer-sergeant in charge of the station at which he is serving.

140. Whenever any observer-sergeant is relieved from duty in charge of a station, he

Digitized by Google

will, before leaving said station, inform his successor of the location of all map-frames, bulletin-boards, and other Government property for which he is responsible to this office. He will also introduce him personally to the members of the meteorological committee or committees of the chamber of commerce and board of trade, and give him such information in reference to the past record of the station and its local meteorological and other peculiarities as will enable the duties of the station to be intelligently discharged by such successor.

A written statement that the provisions of this paragraph have been complied with will be made to this office by both observers.

141. Parties desiring to purchase maps from this office will be required to forward the amount of postage on the same, in addition to the cost price of the maps as given below.

I. The several varieties of the weather-maps will be sold at the following prices:

Maps in one color, without reports or isobaric lines, 1¼ cents each.

Maps in two colors, without reports or isobaric lines, 2 cents each.

Maps on manifold paper, without reports or lines, in books of 100 each, $2.75 per book.

Maps in one color, with current reports and isobars, 2 cents each.

Maps in two colors, with current reports, isobaric and isothermal lines, 3 cents each.

Postage on each map one cent additional, except the manifold ones, on which it will be 25 cents per hundred.

II. Parties desiring copies of any of the following-named publications of this office will be supplied until further notice upon the receipt of the amount of postage on each, as follows:

Annual report	24 cents.
Circular on the practical use of meteorological reports and weather-maps	10 cents.
Monthly Weather Review	1 cent.
Weekly Chronicle	1 cent.

III. All communications in reference to the purchase of maps, whether containing money or not, must be forwarded to this office for action, and payment for maps must in all cases be made in advance and the money sent direct to the Chief Signal-Officer, Washington, D. C. Observers are not authorized to sell maps.

142. One copy of this table of prices will be kept posted in the observer's office for the information of the public.

143. Observers receiving money from individuals to be applied to the payment of postage on maps, bulletins, or other official publications issued by them, will keep a record of the amount received, and forward a weekly statement to the Chief Signal-Officer, showing the amount on hand at date of last report, amount received and expended since that date, amount remaining on hand, and names of parties from whom it was received, with such other information as may be necessary.

INSTRUCTIONS TO OBSERVER-SERGEANTS, SIGNAL-SERVICE, UNITED STATES ARMY, AT RECRUITING STATIONS.

144. I. Instructions have been issued by the War Department to the superintendent of the general recruiting service of the Army to direct the recruiting officers of that service, stationed at certain points, to enlist and order to report to this office such men who can pass the required physical examination as may be presented to them by the sergeants of the signal-service stationed at those points, which now are the following, viz: New York, Philadelphia, Baltimore, Cincinnati, Saint Louis, Boston, Buffalo, Chicago, Cleveland, Detroit, Indianapolis, and Louisville.

The observer-sergeants in charge of those stations will, accordingly, as part of their duties, endeavor to obtain and present selected recruits to the recruiting officer of the general recruiting service at the same city.

II. Instructions have also been issued by the War Department to the superintendent of the general recruiting service of the Army to direct the proper recruiting officers not to reject men presented for enlistment by the sergeants of the signal-corps, on account of shortness of stature, if such applicants are not less than five feet four inches in height, or on account of age, if such men are over thirty-five and under forty years of age.

III. No applicant will be presented for enlistment who shall not, in all other respects than as above specified, fulfill the requirements of the recruiting regulations, of which, and of such changes in them as from time to time are made, information will be obtained by inquiry of the recruiting officer, who will take such measures for physical examination as are usual in the recruiting service. The responsibility of the observer-sergeant will be confined to the selection of recruits for presentation.

IV. With reference to so much of paragraph 1 in each of circulars No. 17 and 18, dated respectively June 7 and July 1, 1873, from this office, as states that men under twenty-one years of age are not enlisted, it will be understood that while the enlist-

Digitized by Google

ment of minors is in general to be discouraged, special exceptions may be made by this office. The act of Congress approved May 15, 1872, (published in General Orders 30, War Department, Adjutant-General's Office, series 1872,) does not prohibit the enlistment of men under twenty-one, who are over eighteen years old, when the written consent of the parent or guardian is properly given, but on the contrary, by necessary construction, sanctions such enlistments when no other objection exists. Should a case arise which, in the judgment of the observer-sergeant, renders an exception to the general rule desirable from the special fitness of the applicant, the latter may forward to this office his application, with the written consent of parent or guardian, on which the observer-sergeant will make a full indorsement of the reasons for recommendation. It is supposed that if this office should except the applicant from the operation of the part of the circulars above mentioned, the recruiting officer would not refuse enlistment on the ground of minority alone.

V. Applicants shorter than five feet four inches will not be presented to the recruiting officer, nor will applications from them be forwarded to this office with a view to their enlistment at the station; but such men may be informed that if they present themselves at this office in compliance with paragraph 2 of circular No. 18, dated July 1, 1873, and pass the examination therein referred to, and also that of the surgeon here, they will be recommended for special exception to the requirements regarding height, which will probably result in their enlistment at this office. The observer-sergeant will not encourage any men to take this course except such as in his judgment are exceptionally fit for this service, a statement to which effect, with the reasons therefor, he will indorse upon a written application in each case for the examination referred to, in which the applicant will clearly state his understanding that he takes upon himself all expense of coming before the board, without any expectation of reimbursement by the United States in any event. Such application, so indorsed, will be brought by the candidate in person for his identification.

VI. No request for exception to the result of the physical examination by the examining surgeon at a recruiting station will be entertained at this office, unless made by the applicant in writing through the surgeon and recruiting officer and forwarded by the latter.

VII. Applicants for enlistment will be divided by the observer-sergeant into two classes, viz: Those for the "full" and those for the "field signal-service," as hereinafter more fully explained, but for both classes it is expressly directed that a high standard shall be maintained, and great care taken not to present recruits who are of bad habits or character so as to cast discredit upon the service, or occasion useless expense to the United States. Special pains will also be given by the observer-sergeant that each applicant shall, before his presentation to the recruiting officer, fully understand for which of the two above-mentioned classes he enlists, with their several requirements, and the recruiting officer will be requested to note in the margin of the enlistment paper and also in the order directing the recruit to report to this office the proper designation of "full signal-service" or "field signal-service," as the case may be.

VIII. Applicants will be presented for the "full signal-service" who, in the judgment of the observer-sergeant, are fitted by education and intelligence for the full duties of the signal-service, including not only field-signals and telegraphy, but also the observation and report of storms, by telegraph and signal, and display of cautionary signals, for the benefit of commerce and agriculture, under the joint resolution of Congress approved February 9, 1870, the acts of Congress approved June 10, 1872, and March 3, 1873, and the authorization of the Secretary of War, and for such other duties as may be required in connection therewith. Only such will be selected as upon examination by the sergeant are able to read and write the English language, have some knowledge of arithmetic, and have sufficient intelligence to be capable in time of performing any of the duties required in the signal-service. The same proficiency required in the examination for assistants to observers will not, however, be insisted upon, as there will be opportunities for future improvement through study and the use of text-books which are provided at Fort Whipple, Va., to which post all the recruits will at first be ordered.

IX. Applicants who, in the judgment of the observer-sergeant, are not fitted by education and intelligence for the full duties of the signal-service, but who are of such ability and character as to render them qualified for the field duties of the signal-service, *i. e.*, those including field-signals and electric-telegraph, as distinguished from those including the observation and reports of storms, and display of cautionary signals, &c., will be presented to the recruiting officer for enlistment in the "field signal-service." The recruits so enlisted will not be precluded from eventual advancement to the full duties of the signal-service and promotion, in case they prove fit and worthy, but will not be considered as included, upon their enlistment, in the regulations in reference to examination, instruction, and other special provisions made for those recruits who may have been enlisted with special reference to the "full duties of the signal-service," *i. e.*, those embracing the observation and report of storms and display of cautionary signals.

Digitized by Google

They may, however, be subject to detail in any of the duties of the signal-service, in the discretion of proper authority.

X. A report of enlistments will be mailed to this office every Saturday, showing the enlistments made during the week, giving name of recruit, date of enlistment, name and rank of recruiting officer, "Enlisted for full signal-service," or, "Enlisted for field signal-service," as the case may be, and other particulars suggested by the form furnished, or which may be necessary for full information on the subject. In case a recruit shall have fair skill as a printer, carpenter, or blacksmith, (the enlistment of such men to be encouraged,) the fact will be noted opposite his name, in addition to the designation of "full" or "field" service. If no enlistment shall be made, or no applications received, the fact will be stated.

XI. Special attention will be directed to prevent any misunderstanding or complaint of misrepresentation regarding the requirements and duties of the signal-service and the terms of enlistment. The circulars from this office, Nos. 17 and 18, dated respectively June 7 and July 1, 1873, are designed to give full information on these subjects, and both of them will be in all cases exhibited to applicants for enlistment, the observer-sergeant truthfully explaining any portion which may not be understood, but not deviating from its terms. Circular No. 17 is explanatory of the "field" and No. 18 of the "full" service, and, after it shall be decided for which of these classes the applicant proposes to enlist and will be presented by the sergeant, the form at the end of the appropriate circular will be properly filled up, signed by the applicant, and witnessed by a disinterested person before the applicant shall be presented to the recruiting officer, and, if the enlistment shall be perfected, the circular so signed will be forwarded to this office with the next weekly report of enlistments. When more copies of the circular above mentioned or of the report of enlistments are needed, requisition will be made for them in the usual manner.

XII. Posters directing application to the observer-sergeant at each recruiting station will be furnished, which he will cause to be posted in proper places and in sufficient numbers, replacing those destroyed or obliterated, the expense of posting which will be paid from this office on his forwarding bills in the usual manner. Publication in newspapers at the station of a notice similar to the posters would prove of much greater value, but this office is not authorized to pay for advertisements. It is supposed, however, that out of interest in the service and in return for information given gratuitously to the press, some newspapers will, when requested by the observer, publish a proper notice, which will be procured, if possible, under a distinct understanding that it cannot be paid for.

XIII. A copy of these instructions, and also one of circulars Nos. 17 and 18, before referred to, as well as of any future instructions or circulars which may be issued on the subject, will be presented by the sergeant to the recruiting officer at the station, in order that he may fully understand the directions given by this office in reference to the execution of the instructions of the War Department, which, it is supposed, have been communicated to that officer by the superintendent of the general recruiting service.

PROPERTY.

145. Blank forms, entitled "Report of signal-service property," will be furnished each observer for making out a quarterly report of the property at his station, which report will be rendered at the expiration of the quarters ending, respectively, March 31, June 30, September 30, and December 31, of each year.

This report will be filled out in the following manner: All property received from this office, and purchased at the station by proper authority from this office, will be entered on the line containing the words "Total during quarter."

On the line headed "Issued and expended during the quarter" will be entered in the proper columns the total expenditures of forms, stationery, &c., consumed in performing the regular duties of the station during the quarter, with such articles as may have been returned to this office. These will be deducted from the amounts in the line beginning "Total during quarter," and the remainders brought down and entered on the line "Total on hand to be accounted for," which completes the *first* report from any station.

Each quarterly report will be made in duplicate, one copy to be transmitted to this office within ten days after the expiration of the quarter, and the other retained by the observer making it out, to enable him to bring forward for next report the "Total on hand to be accounted for," which will be entered in the next report as "On hand from last report."

No article will be entered in this report that is not invoiced from this office.

Every article taken up on this report must be entered under its proper heading, as the misplacement of a single figure may occasion serious difficulty. Before the report is sent in the two copies should be carefully compared, in order that they may be made to correspond exactly with each other.

Digitized by Google

146. Bills for all properly authorized improvements, repairs, or necessary work at the various stations of observation, *must* be forwarded so as to reach this office as near the first day of the month succeeding that in which the work was done as is practicable.

147. It is required that bills for rents of offices, gas consumed, &c., be rendered monthly, and in every case where it is possible the observer is directed to procure such bills and forward them promptly on or before the expiration of each month.

148. Whenever any article of office furniture, fuel, or supplies of any description whatever are purchased by an observer, under authority from this office, it will be entered on a copy of Form 6, as "received by purchase," with the name of the party furnishing it, properly dated and signed, and, accompanied by the memorandum bill of the same, will be forwarded to this office, by mail, *on the day* on which the purchase may be made.

149. All vouchers must contain the autograph signature of the party or firm in whose name they are made, and must in no instance be signed by a clerk or others for them, except where necessity occasions the signing of a voucher by an attorney or agent, in which case that agent's power of attorney must accompany the voucher so signed.

150. When an observer is relieved from the charge of a station he will turn over, on proper invoices, to his successor all property and stores for which he is officially responsible, and will take duplicate receipts therefor, one copy of which he will retain, and forward the other to this office with a final report, on the regular form, of the property for which he was accountable, at the date of his relief, made out in precisely the same manner as the regular quarterly report.

One copy of the invoice of property so transferred will be forwarded to this office by the observer taking charge.

151. When public property is receipted for by an observer he will make a careful examination of it, and forward a written report of the result of such examination to this office.

152. Observer-sergeants, or other enlisted men of the signal-service, receipting for Government property, at a signal station or elsewhere, will be held personally responsible for such property; and to guard themselves against pecuniary loss will assure themselves by personal inspection that every article of property receipted for is actually at the station, and in the condition specified in the receipt.

153. Whenever any article of office-furniture, stationery, &c., is purchased by an observer, under proper authority from this office, it will be entered in a copy of Form 6 as "Received by purchase," with the name of the party furnishing it, and a memorandum-bill of the price paid or to be paid, and forwarded to this office, properly dated and signed, by mail on the day of purchase.

154. Authority must be obtained from this office for making all repairs and purchases at stations, except those enumerated in paragraph 119 of these instructions, and all applications for such authority must set forth the necessity for the expenditure, and state the estimated amount.

155. No public property will be used or labor employed by observers for any purpose whatever, without special authority from this office.

156. When any article of public property, not of an expendable nature, for which an observer is responsible, becomes unfit for service, from any cause whatever, he will report the facts in the case to this office, but will not drop such article from his returns until authorized to do so.

157. Observers will endeavor, by timely repairs, to keep all property for which they are responsible in serviceable condition, and necessary funds for this purpose will be provided, upon satisfactory requisition and estimates forwarded to the property and disbursing officer.

158. If any article of public property be lost or damaged, through the neglect or fault of any observer or assistant, the money value thereof will be stopped against his monthly pay.

159. A rigid economy must be practiced by all observers in the expenses of their several stations, and all irregularities and extravagances will be promptly corrected by charging all excesses to the observers at fault.

160. The following articles will be allowed at each station, and may be purchased at the prices named by each observer without other authority:

One room for the performance of his duties will be rented by the month, at each station, but no more than eighteen dollars per month will be paid therefor without special authority from this office; one desk, (price not to exceed $20;) one table, with drawers, (stained pine, and not to exceed $6;) one wash-stand, (at a price not exceeding $2;) four chairs, (not to exceed $2.25 each;) one stove, with pipe, (not to exceed $25;) one coal-scuttle; one fire-shovel; one water-bucket; one cup or dipper; one goblet; one basin; one large lamp; one oil-can; one dust-pan and brush; one broom; two common spittoons; one lantern. The above-named articles must be of a cheap, plain, and substantial kind. Memorandum-bills (unreceipted) for rent, labor, and pur-

Digitized by Google

chases will be sent to this office as soon as presented, and will be settled at the earliest opportunity.

161. Upon the shipment of any article of property which may be ordered to be turned in to this office, by express, observers are directed to procure from the express-agent at their stations receipts in duplicate for the package or box, and forward them to this office by mail on the date of shipment.

162. Memorandum-bills for labor and for articles purchased must be sent in separately.

163. Fuel will be purchased for heating office, by each observer, at the current market rates, and bills forwarded to this office for settlement. The cost of carrying coal and other fuel to the observer's office will be included in the price of the fuel, and not charged as a separate item.

164. The pay and allowances of observer-sergeants and enlisted men serving as assistant observers are obtained from three different sources, and will be drawn through the property and disbursing officer of the Signal-Service, United States Army, at the end of each month, on the receipt at this office of the following blanks, signed in duplicate:

1st. Form 5—Pay Department:

(FORM 5.)

The UNITED STATES,

To JOHN THOMPSON, Dr.

	Dollars.	Cents.
For pay from 1st of ——, 187-, to —— of ——, 187-, being —— months, —— days, at —— dollars per month.....		
Amount.....		
Deduct for Army Asylum..... $——		
Due United States for clothing overdrawn..... ——		
Due United States for tobacco..... ——		
Balance.....		

Received of —— ——, Paymaster United States Army, this —— day of ——, 187-, —— 100 dollars, in full of the above account, by check No. ——, on —— United States Treasurer, ——, this date, for $——.

JOHN THOMPSON,
(Signed in duplicate.) *Sergeant Signal-Service, U. S. A.*

This payment accords with the soldier's descriptive list, and is noted thereon.

——, *Paymaster U. S. A.*

2d. Form Y—Commissary Department:

(FORM Y.)

The UNITED STATES,

To JOHN THOMPSON, *Sergeant Signal-Service, U. S. A.*, Dr.

	Dollars.	Cents.
For commutation of rations while on extra duty as ——, at ——, from —— to ——, 187-, inclusive, —— days, at 75 cents per day.....		

Digitized by Google

I certify that the above account is correct and just; that the commutation was made by order of the Secretary of War, and was necessary for the public service, there being no opportunity for messing.

———,
———.

Received at ———, this —— day of ———, 187–, from———, C. S. United States Army, the sum of ——— dollars and ——— cents, in full of the above account.

JOHN THOMPSON,
Sergeant Signal-Service, U. S. A.

(Signed in duplicate.)

3d. Signal-Service Receipt-Roll—Quartermaster's Department.

(Voucher to Abstract B.)

For extra-duty pay from —— to ———, 187–, inclusive, ——— days, at —— per day.		
For commutation of fuel from ——— to ———, 187–, ———, at $—— per month....		
For commutation of quarters from ——— to ———, 187–, ———, at $—— per month.		

I certify that the above account is correct and just; that the services were rendered as stated; that they were necessary for the public service, and are borne on my roll of extra-duty men, (Form 3,) for the month of ———, 187–, and that no fuel and quarters in kind have been furnished.

———, ———,
A. A. Q. M., Signal-Service.

Received at Washington, D. C., the —— day of ———, 187–, of ——— ———, quartermaster, United States Army, the sum of ——— dollars and ——— cents, in full of the above account.

JOHN THOMPSON.

(Signed in duplicate.)

These vouchers will be signed by observers and their assistants, one set by each man, exactly as shown in the above illustration.

165. *No part of the body or receipt of either form will be filled up before transmission*, and they must be forwarded direct to this office at such time as will insure their receipt by the property-officer before the 20th of each month.

166. *Observers will not be allowed to sell or otherwise dispose of any of the above-mentioned accounts, nor will they be permitted to draw upon this office, or any of the officers connected therewith, without special authority.*

167. The following tables show the amount of monthly pay to be received by observers and their assistants, for the different years of service, and the sources from which it is received;

Estimate of monthly pay proper and clothing allowance.

FOR SERGEANTS.

Year of enlistment.	Pay proper.	Stoppages, retained pay, and Soldiers' Home.	Amount paid.	Amount retained each month.		Total amount due each month.
				Clothing allowance.	Retained pay.	
1	$17 00	$0 12	$16 88	$7 60	.....	$24 48
2	17 00	13	16 87	4 66	.....	21 53
3	18 00	1 12	16 88	5 94	$1 00	23 82
4	19 00	2 13	16 87	4 66	2 00	23 53
5	20 00	3 12	16 88	5 08	3 00	24 96

Digitized by Google

FOR PRIVATES, FIRST CLASS.

1	$13 00	$0 12	$12 88	$7 38	.....	$20 26
2	13 00	13	12 87	4 54	.....	17 41
3	14 00	1 12	12 88	5 78	$1 00	19 66
4	15 00	2 13	12 87	4 54	2 00	19 41
5	16 00	3 12	12 88	4 87	3 00	20 75

FOR PRIVATES, SECOND CLASS.

1	$13 00	$0 12	$12 88	$7 29	.....	$20 17
2	13 00	13	12 87	4 52	.....	17 39
3	14 00	1 12	12 88	5 75	$1 00	19 63
4	15 00	2 13	12 87	4 52	2 00	19 39
5	16 00	3 12	12 88	4 85	3 00	20 73

The amount retained—$1 each month from pay of third year, $2 from fourth year, and $3 from fifth year—will not be paid until final discharge from the service, and will be forfeited unless the soldier shall have served faithfully to date of discharge.

The pay per month of a soldier re-enlisting after five years' service will be that of the fifth year of his former term, less $1 retained pay. He will also receive $2 per month additional for re-enlistment.

Clothing allowance per month.

Rank.	First year.	Second year.	Third year.	Fourth year.	Fifth year.	Total for five years.
Sergeant	$7 60	$4 66	$5 94	$4 66	$5 08	$335 28
Private, first class	7 38	4 51	5 78	4 54	4 87	325 32
Private, second class	7 29	4 52	5 75	4 52	4 85	323 16

But no clothing allowance will be paid the soldier except on "final statements." When clothing is drawn, if the allowance is exceeded it will be settled by the soldier on the 30th June and 31st December of each year.

Monthly estimate of quartermaster.

No. of days in the month.	Fuel—rate per month.	Quarters—rate.	Extra pay—rates.	Total.
28	$8 00	$10 00	$10 15	$28 15
30	8 00	10 00	10 50	28 50
31	8 00	10 00	10 85	28 85

Assistants are not allowed extra-duty pay.

Two dollars per month retained until discharged.

FIFTH YEAR.

28	$16 00	$18 00	$21 00	$55 00
30	16 00	18 00	22 50	56 50
31	16 00	18 00	23 25	57 25

Three dollars per month retained until discharged.

In addition to the above rates of pay, enlisted men will receive the usual allowance for first, second, third, and fourth re-enlistments.

168. All useless and broken instruments will be forwarded to this office and carefully packed.

169. All instruments or public property of any character whatever, returned to this office by observer-sergeants, or other enlisted men of the signal-service, must have a tag or slip of paper securely attached thereto, indicating the station whence it comes, marked—"Returned from ———, under instructions from O. C. S. O., of date ———."

170. Timely requisition will be made upon the property-officer for books of record, stationery, forms, &c., to insure their receipt before the supply on hand is exhausted.

171. Requisitions for forms and stationery will be made quarterly by mail, and will embrace all the different varieties required for use at stations.

172. In consequence of the abolition of the franking privilege the postage on all official matter transmitted through the mails on and after the 1st day of July, 1873, must be prepaid by postage-stamps.

To enable observers to give compliance to this requirement they will be furnished for official use stamps of different denominations. A weekly return of stamps received and expended will be made on the regular blanks and forwarded weekly to this office. These returns must be made promptly at the expiration of each week, showing how many of each denomination of stamps are on hand at the closing of the last mail of the week; a copy of the return to be retained by the observer in each instance. A memorandum-book furnished for this purpose will be kept, in which will be noted each package or letter mailed, stamped with the official stamp, entering therein the addresses and the number and denomination of stamps used on each and every piece of official mail-matter transmitted; this data will be kept up to enable observers to make reports to the central office as to the exact disposition of the stamps, which report is liable to be called for at any moment.

SPECIAL INSTRUCTIONS.

In case of actual or anticipated neglect or refusal on the part of the employés of any telegraph company by which he is directed to transmit telegraph communications, at the time and in the manner stated in the orders of the Chief Signal-Officer to the observer in charge of a station, then in force, he will proceed as follows:

1. He will prepare every telegraphic communication according to his instructions, and present each, at the time designated, at the proper office of the company for the reception of such communications. He will continue to present all reports, as to the regular tender of which the company has once been advised, until it has been notified by this office that such tender will cease after a certain date, of which notice the observer will be informed.

2. He will, in advance of the presentation of all telegraphic communications, give specific notice to the company, during its usual hours of business, that an official communication of a certain-mentioned character, from the observer, addressed to a certain official person or persons, (the address to be specified,) will, at a certain subsequent hour, (stating what hour,) be presented at the office of the company for telegraphic transmission. This notice will provide for every regular report to be made during the ensuing twenty-four hours, and also will be given in advance of any special communication, when practicable. Such notice will be in writing, addressed to the local manager of the company, and will be delivered, open, to the officer or employé of the company who may be in charge of the local office at the time of delivery. The written notice will be signed in duplicate by the observer, and one copy filed and retained by him. The following general form will be observed:

"SIGNAL-SERVICE, UNITED STATES ARMY,
"*Observer's Office*, ———, ———, 187—.

"To ——— ———,
"*Manager of the Telegraph Company at* ———:

"SIR: As an agent of the War Department for the purpose of taking meteorological observations, in pursuance of the laws of the United States, and of preparing telegraphic communications relating thereto, and of presenting the same for transmission to telegraph companies, I have the honor to give notice hereby that, in accordance with orders received by me to that effect, I will present at the office of the above-mentioned telegraph company at this place, severally, at the times hereinafter mentioned, certain official communications from myself, in my official capacity, and addressed as specified, viz:

"One communication will be presented at —— o'clock — minutes —. m of —— the —— day of ———, 1872, addressed to ——— ———.
"One communication will be presented at —— o'clock — minutes —. m of —— the —— day of ———, 1872, addressed to ——— ———.
"One communication will be presented at —— o'clock — minutes —. m of —— the —— day of ———, 1872, addressed to ——— ———.

"I have the honor to request that the communications above referred to may be received and transmitted telegraphically by the said company to their respective addresses at the times above mentioned, at which they will severally be presented for that purpose.

I am, sir, respectfully yours, &c.,

"———— ————,
"*Observer-Sergeant, Signal-Service, U. S. A.*"

He will also record the time, place, and person, when, where, and to whom he delivered such notice, and reduce to writing any oral reply made or action taken. The record must be dated, timed, and made, plainly written, immediately after the service of the notice.

3. He will present his regular reports for transmission at the times, and as directed in his schedule, at the telegraph-offices, until further orders, whether or not the company has any employés then present whose usual duty it is to receive them. If the office is open for his admission, although closed for the transmission of messages, the communication should be presented to the most responsible person present in the employ of the company, a copy being always retained, and record made as above directed. If the office appears to be closed, he will make himself sure of the fact that it is so.

In writing the message for transmission the observer will not use any form imposing terms or the limitations of a contract, but will write the communications tendered on the form directed by this office.

4. He will keep a written record of the time when, place where, and the name of person employed by the company, to whom each communication was presented. In

Digitized by Google

case the office was closed, so that the communication could not be presented to any employé of the company, he will record the time and place with the fact. If any employé of any telegraph company refuses to receive the message presented to him, it will be sufficient to have made the tender, and to preserve such record as will establish the fact that it was made. The records, in all cases, must be dated and timed, and must be made, plainly written, immediately after the tender of the message. It should rehearse all facts which may tend to keep his memory of the transaction complete.

It is desirable, though not essential, that on some of the occasions when the above-mentioned notice is delivered, as well as when the message is tendered, the observer should, if practicable, take with him another person, wholly disinterested, who may serve as an additional witness of the transaction.

Should the officer or employé in charge of the telegraph office inform the observer generally that he will not in future be admitted to the office at all, he will not, on that account, discontinue giving notice or making tenders, but will give and make, or attempt to give and make, them precisely as before.

The construction of the laws defining the relations of telegraph companies to the United States, which is held by this office, is that the companies are bound to give unconditional priority to telegraphic communications between the several departments of the Government of the United States, and between their officers and agents; that after due notice to that effect the companies are required to transmit such communications at any hour when they are tendered for that purpose, and that prepayment is not required from the Government or its agents.

All the telegraph companies by which the messages of the signal-service have hitherto been sent, according to directions given to the observers, have accepted the provisions of the act of Congress approved July 24, 1866, a copy of which, and of other acts bearing upon the subject, is hereto appended.

AN ACT to aid in the construction of telegraph lines, and to secure to the Government the use of the same for postal, military, and other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That any telegraph company now organized, or which may hereafter be organized, under the laws of any State in this Union, shall have the right to construct, maintain, and operate lines of telegraph through and over any portion of the public domain of the United States, over and along any of the military or post roads of the United States which have been or may hereafter be declared such by act of Congress, and over, under, or across the navigable streams or waters of the United States: *Provided*, That such lines of telegraph shall be so constructed and maintained as not to obstruct the navigation of such streams and waters, or interfere with the ordinary travel on such military or post roads. And any of said companies shall have the right to take and use from such public lands the necessary stone, timber, and other materials for its posts, piers, stations, and other needful uses in the construction, maintenance, and operation of said lines of telegraph, and may pre-empt and use such portion of the unoccupied public lands subject to pre-emption, through which its said lines of telegraph may be located, as may be necessary for its stations, not exceeding forty acres for each station; but such stations shall not be within fifteen miles of each other.

SEC. 2. *And be it further enacted*, That telegraphic communications between several departments of the Government of the United States and their officers and agents shall, in their transmission over the lines of any of said companies, have priority over all other business, and shall be sent at rates to be annually fixed by the Postmaster-General.

SEC. 3. *And be it further enacted*, That the rights and privileges hereby granted shall not be transferred by any company acting under this act to any other corporation, association, or person: *Provided, however*, That the United States may at any time after the expiration of five years from the date of the passage of this act, for postal, military, or other purposes, purchase all the telegraph lines, property, and effects of any or all of said companies, at an appraised value, to be ascertained by five competent, disinterested persons, two of whom shall be selected by the Postmaster-General of the United States, two by the company interested, and one by the four so previously selected.

SEC. 4. *And be it further enacted*, That before any telegraph company shall exercise any of the powers or privileges conferred by this act, such company shall file their written acceptance with the Postmaster-General of the restrictions and obligations required by this act.

Approved July 24, 1866.

[PUBLIC RESOLUTION—No. 9.]

JOINT RESOLUTION to authorize the Secretary of War to provide for taking meteorological observations at the military stations and other points in the interior of the continent, and for giving notice on the northern lakes and seaboard of the approach and force of storms.

Be it resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of War be, and he hereby is, authorized and required to provide for taking meteorological observations at the military stations in the interior of the continent, and at other points in the States and Territories of the United States, and for giving notice on the nothern lakes and on the seacoast, by magnetic telegraph and marine signals, of the approach and force of storms.

Approved February 9, 1870.

[General Orders No. 18.]

WAR DEPARTMENT,
OFFICE OF THE CHIEF SIGNAL-OFFICER,
Washington, D. C., July 3, 1872.

The following order of the Secretary of War, having been received by the Chief Signal-Officer of the Army, is published for the information of all concerned:

"WAR DEPARTMENT,
"*Washington City, June 27, 1872.*

"The Chief Signal Officer of the Army is hereby directed and ordered to carry into effect the special duties imposed upon the Secretary of War by the act of Congress approved July 24, 1866, entitled 'An act to aid in the construction of telegraph lines and to secure to the Government the use of the same for postal, military, and other purposes,' and by the public resolution No. 9, approved February 9, 1870, and entitled 'Joint resolution to authorize the Secretary of War to provide for taking meteorological observations at the military stations and other points in the interior of the continent, and for giving notice on the northern lakes and seaboard of the approach and force of storms,' and by the act approved June 10, 1872, entitled 'An act making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1873, and for other purposes;' and the said Chief Signal-Officer of the Army, and all such persons as have been or shall be designated and employed by him for the taking of meteorological observations, or for preparing or presenting telegraphic communications for transmission, or for transmitting the same, are hereby recognized and appointed as agents of the War Department for those purposes, and are hereby authorized and directed by and in behalf of said Department to offer to any telegraph company in the United States for transmission any and all such telegraph communications as they may be required by the Chief Signal-Officer to make, and to request the transmission thereof by such company or companies, at such times, and in such places, as may be directed by said officer.

"WM. W. BELKNAP,
"*Secretary of War.*"

By order of the Chief Signal-Officer of the Army.

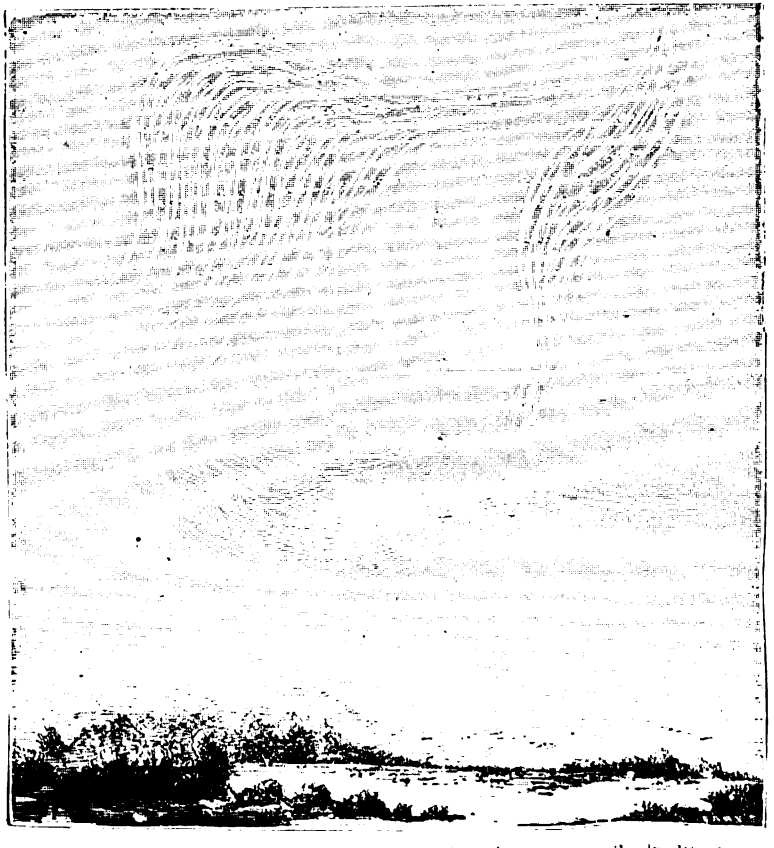
GARRICK MALLERY,
Capt. and Bvt. Lieut. Col., U. S. A.,
Acting Signal-Officer and Assistant.

AN ACT making appropriations for sundry civil expenses of the Government for the fiscal year ending June thirtieth, eighteen hundred and seventy-three, and for other purposes.

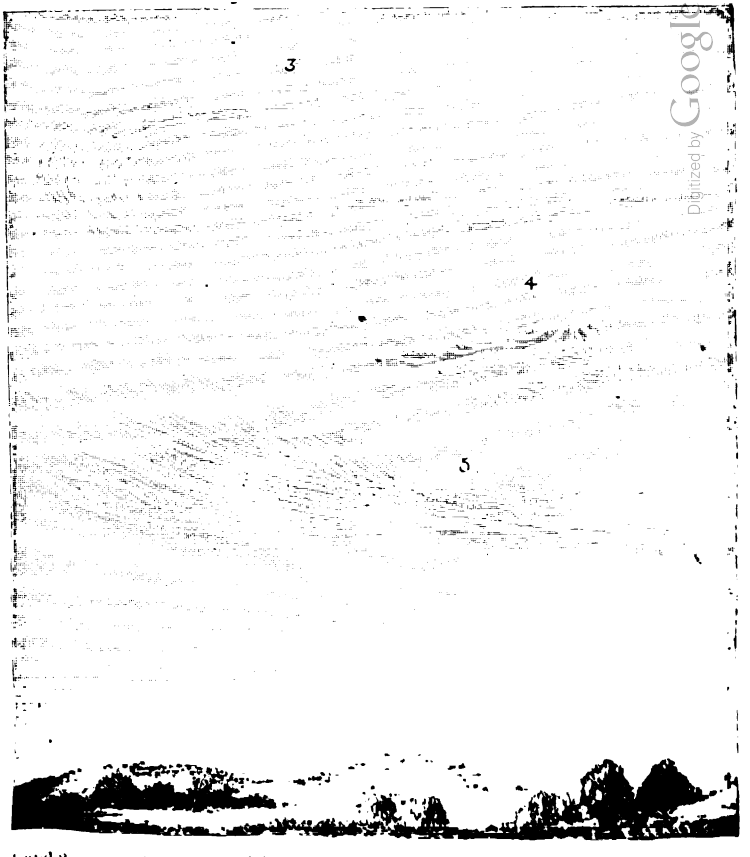
Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the following sums be, and the same are hereby, appropriated for the objects hereinafter expressed, for the fiscal year ending June thirtieth, eighteen hundred and seventy-three, viz:

* * * * * * *

UNDER THE WAR DEPARTMENT.



* * * * * * *



SIGNAL-OFFICE.

For manufacture, purchase, or repair of meteorological and other necessary instruments; for telegraphing reports; for expenses of storm-signals announcing probable approach and force of storms throughout the United States, for the benefit of commerce and agriculture; for instrument-shelters; for hire, furniture, and expenses of offices

maintained for public use in cities or posts receiving reports; for maps and bulletins, to be displayed in chambers of commerce and boards-of-trade rooms; for books and stationery; and for incidental expenses not otherwise provided for, two hundred and fifty thousand dollars: *Provided*, That the Secretary of War be, and he hereby is, authorized and required to provide, in the system of observations and reports in charge of the Chief Signal-Officer of the Army, for such stations, reports, and signals as may be found necessary for the benefit of agriculture and commercial interests: *And provided*, That no part of this appropriation, nor of any appropriation for the several Departments of the Government, shall be paid to any telegraphic company which shall neglect or refuse to transmit telegraphic communications between said Departments, their officers, agents, or employés, under the provisions of the second section of chapter two hundred and thirty of the Statutes of the United States for the year eighteen hundred and sixty-six, and at rates of compensation therefor to be established by the Postmaster-General: *Provided, also*, That whenever any telegraph company shall have filed its written acceptance with the Postmaster-General of the restrictions and obligations required by the act approved July twenty-fourth, eighteen hundred and sixty-six, entitled "An act to aid the construction of telegraph lines, and to secure to the Government the use of the same, for postal, military, and other purposes," if such company, its agents, or employés shall hereafter refuse or neglect to transmit any such telegraphic communications as are provided for by the aforesaid act, or by the joint resolution approved the ninth day of February, eighteen hundred and seventy, "To authorize the Secretary of War to provide for taking meteorological observations at the military stations and other points of the interior of the continent, and for giving notice on the northern lakes and seaboard of the approach and force of storms," such telegraphic company shall forfeit and pay to the United States not less than one hundred and not exceeding one thousand dollars for each refusal or neglect aforesaid, to be recovered by an action or actions at law, in any district court of the United States.

Approved June 10, 1872.

NOTE.—In preparing these instructions free use has been made of the Smithsonian "Directions for Meteorological Observers," of those issued by the Surgeon-General of the Army, and of Colonel Williamson's valuable work on the Barometer.

The office is indebted to the courtesy of Professor Henry, the distinguished secretary of the Smithsonian Institution, for permission to use the following illustrations of the Howard classification of clouds, which is the one to be followed by all observers.

PAPER 8.

REGULATIONS AND RULES OF THE OFFICE OF THE CHIEF SIGNAL-OFFICER OF THE ARMY.

[General Orders No. 28.]

WAR DEPARTMENT,
OFFICE OF THE CHIEF SIGNAL-OFFICER,
Washington, D. C., September 1, 1873.

The following regulations and rules, relating to the duties of commissioned officers, enlisted men, and civilian employés at this office, are published for their government, and will be strictly observed.

By order of the Chief Signal-Officer of the Army.

GARRICK MALLERY,
Capt. First Infantry, Bvt. Lieut. Col., U. S. A.,
Acting Signal-Officer and Assistant.

GENERAL REGULATIONS.

I.—DIVISION OF DUTIES.

The officers on duty at this office are classified as, 1st, commissioned officers of the Army and acting signal-officers who have been announced in orders as "Assistants to the Chief Signal-Officer;" 2d, other commissioned officers of the Army; and, 3d, civilian assistants. The duties of the office will be divided between them as follows:

1. One assistant to the Chief Signal-Officer will have charge of the orders, records, and general correspondence of the office, critically examining all papers presented to

Digitized by Google

him for file, and reporting upon any irregularity. He will also have the superintendence of enlistments, and perform such other duties as may be specially assigned to him.

2. One assistant to the Chief Signal-Officer will have charge, as property and disbursing officer, of all matters pertaining to money and property, (all communications upon which subjects will be referred to him for action,) together with such duties as may be specially assigned to him.

3. One assistant to the Chief Signal-Officer will, as instructor, have charge of all matters pertaining to the instruction of the signal-service of the Army, and, in addition, as "Assistant in charge of stations," will be charged with the general supervision of the observer-sergeants upon stations, and of the receipt, record, and publication of the weather-reports at this office, together with such duties as may be specially assigned to him.

4. The preparation of the current "Synopsis and Probabilities," and of the official publications in relation to practical meteorology, including the "Weekly Weather Chronicle," "Monthly Weather Review," "Daily Bulletin, Synopsis, Probabilities, and Facts," and such other duties as are related thereto, will be divided between several assistants to the Chief Signal-Officer and civilian assistants, in accordance with a roster to be published from time to time providing in advance for the specified period. In the absence of other orders, the assistant, who at any time may be relieved from the preparation of the current Synopsis and Probabilities, will take charge of the preparation of the publications above referred to.

5. One officer will have charge of the instrument-room and the examination, comparison, and repair of instruments therein, together with such duties as may be specially assigned to him. He will submit a written report to the Chief Signal-Officer every ten days on the condition of each instrument, whether its record is satisfactory as a standard; if not, to what extent it has been unreliable in its indications, with, if possible, a statement of the cause and suggestion of the remedy. His duties are more fully specified under a separate section below.

6. Two commissioned officers of the Army and acting signal-officers will be detailed as inspectors of stations. Their duties are fully set forth in a separate section below.

7. The assistants to the Chief Signal-Officer mentioned in paragraphs 1 and 3 of this section will be permanent members of the board convened at this office for the examination of applicants for enlistment and for instruction in the duties of assistant to an observer on station, and also of the board convened for the examination of candidates for promotion to the grade of sergeant, signal-service. Commissioned officers of the Army, other than those last above referred to, will, as occasion requires, be detailed to be additional members of each of these boards.

II.—Rules for duty.

The following rules relating to the duties of persons connected with the office will be observed by them:

1. When any officer or assistant at this office, charged with any regular duty or work, may be relieved therefrom, either permanently or temporarily, he will formally turn over the duty or work to the officer or assistant designated to receive it, and will direct the clerks and enlisted men, who have been serving under his orders, to report for instructions to the officer or assistant who relieves him, whose name will be stated in orders.

2. Every officer and assistant other than those above referred to in section I, "Division of Duties," paragraphs 1, 2, and 3, under the head of "General Regulation" in this order, will, daily at 10 a. m., make to the Chief Signal-Officer a written report of the duty on which he may be on that day engaged, with the number of clerks and enlisted men employed under his direction, for which purpose blank forms will be furnished.

3. Every officer under whose immediate orders enlisted men or civilian employés have been detailed for duty, will, on every Saturday, make to the Chief Signal-Officer a written report, stating the name and rank of all men on duty with him, the date when they entered upon duty at this office, the nature of their respective duties, and the changes by new detail, relief, or other casualty which occurred during the week, together with such remarks as may exhibit the conduct and work of the men reported upon.

4. The attention of all persons on duty at this office is again directed to the order of the Secretary of War, dated War Department, July 19, 1870, as follows:

"All officers and clerks on duty in the bureaus of the War Department are prohibited from exhibiting any table, statement, or paper belonging to the official records, or giving any information, copy, or extract from the same, or giving any information respecting the business of the Department to any person whatever, not on duty in one of the offices of the Department, without in each case the authority, in writing, of the chief of the Bureau concerned. A rigid compliance with this order will be enforced, to prevent improper use of information irregularly obtained."

Digitized by Google

5. In case of the absence of commissioned officers or enlisted men on duty at this office, on account of illness, a certificate to that effect from the proper medical officer of the Army in this city must be furnished without delay, by commissioned officers to the Chief Signal-Officer, and by enlisted men to the commissioned officer under whose orders they are immediately serving. A similar certificate from a practicing physician will be furnished by civilian assistants to the Chief Signal-Officer, and by clerks and other civilian employés to the commissioned officer under whose orders they are immediately serving.

III.—Rules concerning office-rooms, etc.

The following rules will be strictly observed in the office-rooms and halls:

1. The duties of this office do not admit of general office-hours being defined, which will, in the several divisions, be such as shall be, from time to time, established by the officer in immediate charge. As concerns the public, the office-hours will be considered as between 9 a. m. and 3 p. m., and persons unconnected with the office will not be admitted to the rooms except during those hours, unless accompanied by an officer. Visitors will not be received in the instrument-room before 12 m., except in cases specially designated.

2. The office-rooms must not be used as visiting-rooms, or for purposes of entertainment. Persons visiting the office are expected to transact their business as promptly and briefly as practicable.

3. The rooms occupied exclusivly by clerks and enlisted men will not be visited by any persons unconnected with the office, except for some urgent necessity and with the special permission of the commissioned officer under whose orders the men in the room to which admission is desired are serving.

4. All employés entering or retiring from the office will do so in a quiet and orderly manner.

5. Conversation upon any other subject than such as relates directly to the business of the office; giving of information, unless called for by the proper authority; writing of private letters and reading of newspapers during hours of duty, are strictly prohibited.

6. All conversation necessary to the proper discharge of the duties of the office will be carried on in a low tone of voice; and all unnecessary noise, either in the rooms or halls of the office, is prohibited.

7. Messengers in passing in and out of the rooms and halls will do so as quietly as possible, and will report their business in each room, at all times, to the clerk or non-commissioned officer in charge, or, in his absence, to the enlisted man in temporary charge of the room.

8. No rooms occupied by either commissioned officers, civil employés, or enlisted men will at any time be locked, except the room in the personal charge of the chief clerk in the property-division and the model-room, which two rooms shall be kept locked, when not in use, and the keys placed in charge of the watch-sergeant.

9. The clerk or non-commissioned officer in charge of a room will be held responsible for a strict observance of the above rules by all employés under his charge, and any violation of them will be promptly reported by him to the commissioned officer under whose orders the offender may be serving.

IV.—Correspondence and records.

1. All communications in any way relating to, or connnected with, the business of this office, should be addressed to the Chief Signal-Officer of the Army; and any communication in any way relating to such business, received by a military or civilian assistant, or any other person connected with the office, without such address, will be regarded by him as official, and will be handed to the assistant having charge of the records and general correspondence, that it may be properly entered upon the books of the office and receive attention.

2. All papers prepared in the office, or compiled from the data belonging to it, or in the preparation of which its facilities, clerks, books, or records are used, are the property of the United States, are subject to the direction of the Chief Signal-Officer, and will be made of record by presentation to the assistant in charge of records, except in cases where the Chief Signal-Officer may specially direct their submission in the first instance to himself. All such papers will be kept in the office and accessible to proper authority, in case they may be needed in the absence of any officer or assistant.

3. All communications from this office, in any manner relating to or connected with its business, will either be written in the name of the Chief Signal-Officer, and be signed by him, or will set forth in terms that they are written by his direction, and will in that case be signed by the officer having general instructions in relation to them, or

Digitized by Google

written special instructions in the particular case. No such communication will, in any case, be written without the direction or approval of the Chief Signal-Officer previously obtained; nor will any such be sent or mailed from the office until it shall have been duly entered and copied on the office-books, for which purpose it will be presented to the assistant having charge of the records and correspondence.

4. The official title of the civilian assistants in the signal-service is "Assistant in the office of the Chief Signal-Officer," or abbreviated, "Assistant O. C. S. O.," which title, in case of signature, will be written after the name, and will be appended to all official papers. All papers so officially signed will be handed to the assistant in charge of records, except when the Chief Signal-Officer may specially direct that they shall be submitted to himself in person.

5. All papers or writings in any way relating to the duties with which the office is charged, or to the subject of, or theories concerning, meteorology having relation to those duties, prepared by any person in any way employed in this office, in any manner proposed for publication or likely to be published, must be formally submitted to the Chief Signal-Officer, for such disposition as he may direct.

The mode of publication of any deductions or theories or papers of any description, to have in any way or by any construction the sanction of the office, has already been determined upon, and the annoyances to arise through deviation from the plan contemplated cannot be permitted.

6. The writing-paper of this office, having an official heading, stamped or printed, will not be used for communications of a private or personal nature, and when such official heading is used, whether stamped, printed, or written, the communication will be considered as official, and be subject to the provisions of the above paragraphs.

7. Neither the official envelopes of the office, nor the official postal stamps furnished to it, will in any case be used to cover any but strictly official communications, written and disposed of in accordance with this order.

8. Requests for the use of any filed paper will be made to the assistant in charge of records, who will provide checks for its return to file. He will furnish any additional information or explanation applied for, on the subject of this section, and will be responsible for the observance of its provisions.

9. The correspondence and official papers connected with the duties of property and disbursing officer, and those connected with the general supervision of the observer-sergeants upon stations, and of the receipt, record, and publication of the daily weather-reports at this office, are not included in the provisions of the above paragraphs 1, 2, and 3 of this section, and the officers designated by paragraphs 2 and 3 of section I, "Division of Duties," under the head of "General Regulations" in this order, will be responsible therefor, in the same manner as has hitherto been the usage of the office.

10. The following table exhibits the papers, reports, &c. connected with this section to be submitted by the Chief Signal-Officer of the Army to the honorable Secretary of War, and to the Adjutant-General, War Department:

V.—General correspondence and record-rooms.

These rooms are in immediate charge of one chief clerk, with general supervision.

The enlisted men employed and the special duties assigned to each are as follows:

One sergeant, whose duty it is keep a correct record of all "letters sent" to general correspondents, and, in the absence of the chief clerk, to assume charge of the rooms.

One enlisted man who keeps a record of all "letters sent" to observer-sergeants in charge of stations and "letters received" from telegraph companies; one in charge of "letters received" from general correspondents; one in charge of "letters received" from observer-sergeants and from those corresponding in the interests of agriculture: one in charge of correspondence (letters "sent" and "received") with the post at Fort Whipple, Va., and general correspondence relating to the enlisted men of the service: one in charge of an order-book, in which is recorded all orders, general and special, issued by direction of the Chief Signal-Officer; one in charge of the reports mentioned in Section IV under this head, the charge of descriptive book of enlisted men, muster-rolls, recruiting-returns, enlistment and other papers relating directly to the enlisted men of the signal-service, and two to whom is assigned the miscellaneous work of the rooms.

RULES FOR THE DIVISION IN CHARGE OF THE PROPERTY AND DISBURSING OFFICER.

1. Upon the clerk in charge of the property-division devolves the duty, under the direction of the property-officer, of the immediate supervision and examination of all bills against the central office and the various stations of observation, the preparation of such bills for vouchers and money-accounts of the office and the correspondence pertaining thereto, and the prompt rendition of all reports and papers which this branch is called upon to make at the time designated for such reports, and for the proper record and care of all papers sent to him for action or file.

He is to hold, under the authority of the property-officer, the sergeant appointed for the purpose responsible for the proper discipline of the men and the neatness of the rooms and desks occupied by them, and the strict performance of all the duties required therein, conformably to the rules and regulations displayed in said rooms.

A daily record of the time of arrival and departure of each man is to be kept and rendered on Saturday of each week to the property-officer, accounting strictly for all tardiness or omissions to report during the period for which the roster is made.

2. All letters, communications, vouchers, and other papers or indorsements received at, sent from, or forwarded through, this office for official action relating to the money or property in charge of this office will be placed on record in the office-books, and the action upon them carefully noted.

To insure the prompt and accurate performance of the work, it is assigned in portions, under the immediate direction of the clerk in charge, substantially as follows:

One man has the care of the writing and recording the miscellaneous letters sent, in which are kept copies of all letters emanating from this division; one man is in charge of the "letters-received book," containing a synopsis of all letters received: one man has the keeping of the "returns of signal-property" from the military posts throughout the country, the examination of those returns and the entry in a distinct set of letter-books of all correspondence upon the subject of property-returns, both sent and received; one man is in charge of the property-account with the observers, whose duty it is to keep a record of all property sent from the office against the party to whom it is sent, invoicing the property to the observers in charge of the stations, and the examination and correction of the reports of property, which are required to be sent in promptly at the expiration of each quarter by them; one man has the preparation of all vouchers for abstracts, of making up the abstracts and accounts-current and the property returns, with an assistant to assist in comparing them, as made up, before they are transmitted to the accounting officers of the Treasury Department: one man is employed in preparing names and subject-indexes for the "letters sent" and "received" books; one man has the copying of all the money-papers of the disbursing-officer in the office-books, in which are kept a verbatim copy of each voucher, abstract, and account-current, and any paper accompanying the same.

One sergeant, with a corps of assistants, has charge of the preparation of vouchers for settlement of all accounts against the office, and is responsible for the proper keeping of all records of disbursements of money on vouchers, together with the settlement of the pay and commutations of the men serving on stations and in this office.

The receiving, unpacking, packing, and shipping of goods is in charge of a sergeant, with a number of assistants, whose duty it is to designate what portion of the work is to be done by each, and to see that it is properly performed.

The duty of preparing matter for the mails is assigned to one man, who is appointed under special orders of this office, whose duty it is to take charge of, and account to

Digitized by Google

the property and disbursing officer for, the postage-stamps and stamped envelopes which may be placed in his hands for that purpose.

To economize time and labor a letter-balance is placed in each important room; so that, when a letter is sealed or a package made up, the party making it up may immediately weigh it and mark in pencil upon it the weight thereof. At 1, 2, and 3 p. m. each day these packages will be sent to the stamping-clerk, who will then only have to affix the appropriate stamps according to the weight.

It is positively directed that no official stamp shall be used for private mail-matter.

The machine-shop is in charge of a private with assistants. The man in charge is held accountable for the care and proper keeping of all machines, tools, &c.

The library is in charge of one man as librarian, who is required to keep record of the books coming in and taken out; is accountable for their proper distribution in the cases, and the keeping up of the library catalogue. Any person taking a book from the library will leave with the librarian his name and the title of the book taken. No book so taken will be loaned to any person not connected with this office.

3. Employés will be at their desks at 9 o'clock a. m., and will confine themselves to their respective duties until 3 p. m., except 15 minutes between 12 and 1 o'clock, which will be allowed for lunch.

The keys of all desks will be deposited at the close of each day with the clerk in charge of the room or in a place known to him.

All desks must be equipped with a sufficient supply of stationery, so as to obviate all necessity for one man calling on another for it.

A rigid enforcement of the foregoing will be exacted, and all deviations reported to the property and disbursing officer.

4. No enlisted man of the signal-service will be allowed to sell or otherwise dispose of any portion of his pay accounts, (vouchers for pay and commutation,) nor will he be permitted to draw, (or give orders,) upon this office, or any of the offices connected therewith, without special authority.

5. The following reports from this division are submitted by the Chief Signal-Officer of the Army to the honorable the Secretary of War at the dates and under the authorities set opposite each:

Nature of documents.	By what authority called for.	When to be submitted.
1. A statement of contracts entered into during the year previous.	Act approved April 21, 1808, (Statutes at Large, vol. 2, p. 485.)	Early in January of each year.
2. A statement showing military appropriations, with the expenditure and balance unexpended at the end of the year; with an estimate of probable demands on such balance.	Act approved May 1, 1820, (Statutes at Large, vol. 3, p. 567.)	Early in February of each year.
3. A statement of all moneys expended by War Department disbursing officers during the year.	Act approved August 26, 1842, (Statutes at Large, vol. 5, p. 527.)	In January of each year.
4. The name of clerks and all persons employed, salaries, &c., during the year or any part thereof.	Act approved August 26, 1842, (Statutes at Large, vol. 5, p. 525.)	In January.
5. An inventory of property belonging to the United States in the public buildings and grounds occupied in the District of Columbia.	Act approved July 15, 1870, (Statutes at Large, vol. 16, p. 364.)	December 1,

6. The property and disbursing officer is required to make the following returns of property and money to the officers named, periodically as below:

Nature of account.	To whom made.	Period.
Returns of signal equipments and stores	Chief Signal-Officer	Quarterly.
Returns of equipments and stores belonging to Observation and reports of storms," &c.	do	Do.
Returns of quartermaster's stores	Quartermaster-General	Do.
Returns of clothing, camp and garrison equipage	do	Do.
Returns of ordnance	Chief of Ordnance	Do.
Returns of medical stores	Surgeon-General	January & July.
Abstract current, abstract A, purchases, abstract B, expenditures, vouchers to abstracts A and B.	Third Auditor	Monthly.

7. The several varieties of the weather-maps will be sold at the following prices:

Maps in one color, without reports or isobaric lines, 1½ cents each.

Maps in two colors, without reports or isobaric lines, 2 cents each.

Maps on manifold paper, without reports or lines, in books of 100 each, $2.75 per book.

Maps in one color, with current reports, and isobars, 2 cents each.

Maps in two colors, with current reports, isobaric and isothermal lines, 3 cents each.

Postage on each map one cent additional, except the manifold ones, on which it will be 25 cents per hundred.

Digitized by Google

The publications other than maps will be supplied until further notice upon the receipt of the amount of postage on each, as follows:

Annual report	24 cents.
Circular on the Practical Use of Meteorological Reports and Weather-Maps	10 cents.
Monthly Weather Review	1 cent.
Weekly Chronicle	1 cent.

All remittances, in payment of subscriptions to, or for the purchase of, maps, or in payment of postage on maps or other publications of the office, made by draft or post-office money-order, must be made payable to the property and disbursing officer of the office.

8. *Quarterly allowance of stationery, forms, &c., for each station.*

1 daily journal.	100 record-sheets for self-registering instrument.
1 daily record of observation.	
1 record of bulletins.	300 circuit blanks.
1 record of letters sent.	1,000 Forms No. 2.
1 record of letters received.	1,500 Forms No. 3.
3 original records of observations.	50 Forms No. 4.
6 pen-holders.	600 Forms No. 5.
72 pens.	500 Forms No. 7.
6 lead-pencils.	1,000 Forms No. 8—"maps."
2 India rubber, pieces of.	1,000 Forms No. 15.
1 red tape, spool of.	25 Forms No. 19.
1 sponge, piece of.	25 Forms No. 20.
1 red ink, bottle of.	10 Forms No. 21.
1 black ink, bottle of.	25 Forms No. 22 A.
1 mucilage, bottle of.	25 Forms No. 22 B.
1 sealing-wax, stick of.	25 Forms No. 23.
3 letter-paper, quires of.	25 Forms No. 24.
1 note-paper, quire of.	25 Forms No. 25.
2 cap-paper, quires of.	100 Forms No. 26.
1 envelope-paper, quire of.	25 Forms No. 28.
200 envelopes, official.	30 Forms No. 30.
50 envelopes, small.	50 Forms No. 31.
50 carbon-paper, sheets of.	25 Forms B.
2 blotting-paper, sheets of.	25 Forms A.

List of stationery, forms, &c., sent to a station when established.

1 Guyot's Meteorological Tables, copy.	1 black ink, bottle of.

RULES FOR THE DIVISION OF THE RECEIPT, RECORD, AND PUBLICATION OF WEATHER-REPORTS.

I.—OBSERVER'S ROOM.

DAY-OBSERVERS.

Office-hours from 8.15 *a. m. to* 3 *p. m.*

1. The observer in charge of station will have immediate supervision of the examination and filing of mail reports from the several signal-stations, of the correspondence with these stations on matters of routine duty, and of all observers and assistants on station duty in this office. He will be held responsible for the proper discipline of the men, and the cleanliness of the several rooms used for station purposes, and for the proper performance of all duty done therein. He will keep a daily record of the time of arrival and departure of each man under his charge, and on Saturday of each week render a return of the same to the officer in charge of stations, accounting properly for all delays or failures to report during the week. He will report on Form 24 the number of maps, weather and post-office bulletins issued each week, classifying them according to time of issue, and see that the entries in the daily record are promptly and properly made. He will make out the monthly meteorological chart and the monthly means on Form 22. He will be responsible for the proper and punctual mailing of all matter ordered to be sent by mail from the station-room, and will attend to the shipment of all anemometers and self-registering attachments issued to the several stations, and to such other duties of a general nature as may be assigned to him from time to time. To secure the prompt performance of office-work, it will be distributed under his direction substantially as follows: One man in charge of correspondence and general clerical work; one man in charge of the special-bulletin book, in which all reports are copied from the Forms 4 received by mail from the several stations of observation. This man must be an instructed observer, and he will also make and record all the regular observations taken between the hours of 8 a. m. and 3 p. m. One man for general duty, such as briefing, indexing, and filing station reports, copying records, &c. One man charged with the duty of changing the large weather-map in hall of office, filing and distributing printed weather-maps in the office, and enveloping those sent out by mail.

1. A correct list will be kept by the observer of all persons and institutions supplied with maps, bulletins, Monthly Weather Reviews, and Weekly Weather Chronicles as mailed therefrom, with the local address of each. He will also keep a complete list of offices furnished with the printed Synopsis and Probabilities, with the names of the several distributing centers from which they are supplied.

3. In addition to the regular-station records, the following will be kept in suitable form for convenient reference:

All extracts from logs of vessels received, with name of each vessel and party from whom received.

Cautionary-signal record, as specially reported by the observers.

Location of the signal-office at each station, with position and elevation of the several instruments.

Bench-marks at the various river-stations, with changes in same when made at any time.

All marine records received, with name of vessel and party from whom received.

All casual reports and meteorological memoranda received from voluntary correspondents and sent to the observer's room for file.

Time of receiving post-office bulletins at the various offices.

The daily journal will be carefully and fully kept up.

4. All work must be promptly done and not be allowed to accumulate from day to day; all station-reports will be carefully examined and compared, and when errors are found, the observer at fault will be notified immediately, in order that the proper correction may be made as soon as possible.

5. On the first day of each month the observer in charge will examine the check-book of reports, and call upon all delinquents for such as have not been received at that date, if sufficient time has elapsed for their receipt by mail.

6. Smoking will not be allowed in any of the office-rooms.

7. The records in charge of the observer will not be taken out of the room in which they are habitually kept, without the authority of the Chief Signal-Officer.

8. The regular-bulletin book for each month, when filled, will be deposited in the office library for safe-keeping and convenience of access.

9. On the first of January, April, July, and October, respectively, of each year, the file copies of the printed weather-map will be counted out in quarterly volumes by the observer, and turned over to the property-officer for binding.

10. One observer sergeant and two assistants will be charged with the translation

Digitized by Google

and record of the morning telegraphic reports. The observer will translate the reports as rapidly as they are received from the telegraph-room; one assistant will enter the reports, as translated on Form 3, making the required number of manifold copies, and will fill up the columns of barometric and thermometric changes during such intervals as occur in the receipt of reports. The second assistant will write three copies of the translated reports on manifold paper for distribution as follows: One for use of the officer making out the Probabilities; one for use of assistant in changing the large weather-map in hall of building; and one for use in printing-office, and such additional copies as may be ordered from time to time. These translations will be distributed promptly by the messenger charged with their delivery, and each sheet must show the time of the first and last entries upon it. If there should be any delay in the receipt of reports when a sheet is partly filled, it will not be held for completion, but will be torn out at once and sent to the parties for whom it is prepared, in order that their work may not be delayed by any fault in this office.

11. Back reports will not be entered in Form 3, but will be translated as received, and manifold copies made and distributed in the same manner as current ones. They will be copied into the bulletin-book in *red* ink under the proper date.

12. The observer in charge of the translation of reports will be responsible for their prompt and correct entry in the bulletin-book, and will see that such entry is made before the expiration of the regular office-hours each day.

13. The morning bulletins will be torn out at 10.30 a, m.. or upon notification from the telegraph-room that the circuits are closed, except on Sundays, when the time may be extended, in case of necessity, to 11 a. m. At ten minutes before 10 o'clock each day, one copy of the bulletin, as written up to that time, will be torn out and sent promptly by messenger to the printing-room. If the reports are not all entered by this time, another copy will be sent to the printer as soon as they are received, and the bulletin completed. One copy of the complete bulletin will also be posted in the hall of the office, and all those for local distribution by messenger will be sent to the officer in charge of stations. Those for foreign correspondents will be kept with the afternoon and midnight bulletins, and mailed in packages semi-monthly to the proper address. Those for distribution by mail in this country will be properly addressed and mailed with the regular office-mail daily.

14. The observer in charge will make out a list of telegraphic errors at each report, and send it to the officer in charge of stations, with the copies of the bulletin intended for his use.

NIGHT-OBSERVERS.—FIRST RELIEF.

15. The observer in charge of this relief, with one assistant, will report promptly each day at 4 p. m. and remain until 12 p. m., or until relieved by the sergeant in charge of the second relief.

16. The assistant charged with the special duty of writing the manifold copies for use of the Probability and printing rooms will report at 5 p. m., and remain until the Synopsis and Probabilities are ready for issue when he will distribute the copies among the Associated Press agents authorized to receive them. He will return to the office at 11.15 p. m., and remain until the midnight Probabilities are ready for issue, when he will distribute copies of the same as follows: One copy to Daily Chronicle, one to National Republican, one to New York Associated Press, and one to the American Press Association, and such other places as may be designated from time to time.

17. The time of receiving the midnight copy for distribution will be noted on the proper form, and also the time of its delivery to the press agent. The utmost dispatch must be used by the assistant in performing this part of his duty.

18. The observer will be responsible for all observations made during his tour of duty, for the discipline of all enlisted men and all messengers then on duty in the buildings, except those in the telegraph-room, and, in his capacity as watch-sergeant, for the safety of the buildings and the public property therein. He will translate the afternoon reports as received, and his assistant will write the bulletins as the reports are translated, making the changes in the barometer and thermometer at such times during the work as there may be delay in the receipt of reports. The bulletin-book will be properly and promptly filled under the supervision of the observer, and all back reports entered in red ink under their proper dates. River-reports will be entered and the changes recorded in the special-bulletin book provided for this purpose. The manifold copy of reports for the officer in charge of the Probabilities will be sent to his room as fast as each sheet is translated, and if any delay occurs in receiving the reports, all on hand at the time of such delay will be sent down without waiting for enough to fill the sheet.

19. The large weather-map for displaying the afternoon reports will be changed regularly by 7.45 p. m., and the same care taken of the symbols and tags as prescribed for those used on the other two maps. One copy of the bulletin will be posted in the office-hall as soon as completed, and one copy for the officer in charge of stations, and one for the printing-room, placed in their proper envelopes, and retained for delivery

Digitized by Google

the next morning with the midnight bulletins. All other copies will be left on the desk of the observer in charge of the station for proper distribution next day.

20. All nine o'clock reports received by telegraph will be entered in the bulletin-book provided for that purpose, and a copy of them sent to the Probability-room.

21. All time not required for the performance of regular station-duties will be occupied in addressing envelopes from lists furnished by the sergeant in charge of station, and especial care must be taken to write the addresses plainly and distinctly.

22. All reports received before midnight will be translated, distributed, and recorded promptly.

23. The observer in charge will keep a record of the time at which each man reports for duty, and will turn over this record on Saturday of each week to the sergeant in charge of station.

24. Smoking will not be allowed in the office during the hours of duty.

NIGHT-OBSERVERS.—SECOND RELIEF.

25. The observer and assistant on this relief will be on duty from midnight until 8 a. m., or until relieved by the arrival of the watch-sergeant in charge of the day tour of duty, or by proper authority. The observer will take charge of the translation of reports promptly on time, and will be held responsible for their prompt delivery in the Probability-room in the manner already prescribed for the afternoon report. He will translate the reports as received from the telegraph-room, while one assistant enters them on the bulletin, and the other makes the manifold copies for the Probability-room.

26. After the reports are all received and translated they will be entered in the bulletin-book, all back dates being entered in red ink in their proper places.

27. One copy of the bulletin will be posted on the bulletin-board in the office-hall, and one for the officer in charge of station and one for the printing-room will be put in the same envelopes with the copies of the afternoon bulletins remaining, and placed, with the other copies made, upon the desk of the sergeant in charge of station, or in such other place as he may designate.

28. The large weather-map of the midnight reports in the office-hall will be promptly and properly changed, and the same care taken with symbols and tags as prescribed for the other two maps.

29. During the receipt of the midnight reports, the manifold copy for the Probability-room will not be delayed at any time over one minute.

30. In addition to the work of translating and recording reports, the observer will see that the envelopes used in distributing the post-office copies of the printed Synopses and Probabilities are plainly addressed, and that the inclosures are folded and sent to the post-office in time for the earliest morning mail that leaves the city. He will also assist the printer in reading the proof of the Synopses and Probabilities whenever notified that it is ready. The assistant who carries them to the post-office may then be excused from duty for the remainder of the night, except on Saturday nights, when the post-office bulletins not being printed he will remain during the full hours of duty. The observer in charge of its relief will be held responsible as watch-sergeant for the safe-keeping of the buildings and property connected with the office, and for the discipline of the enlisted men on duty with him or in the buildings at the hours when he is in charge. He will be governed, in case of fire, and in reference to the supervision of the watchman, by the general instructions that follow.

31. Smoking will not be allowed in the office-room during the hours of duty.

GENERAL INSTRUCTIONS.

32. Each observer in charge of a relief will assure himself by personal inspection, when going on duty, that the fire-extinguishers, fire-buckets, and axes are in their proper places, and ready for immediate use. He will see that all the men on duty during his tour are carefully instructed how to act in case of fire, and will, in the event of such an occurrence, immediately send a messenger to notify the nearest officer connected with the office of the fact. If the fire, when discovered, is of such extent that it cannot be extinguished by the means available in the office, the alarm will be turned on from the box (No. 68) attached to the building, and every possible precaution taken to subdue the flames before the arrival of the engines. If the fire should get so far under headway that the destruction of the building is to be feared, prompt measures will be taken to remove to some place of security as much public property as possible, but especially the office-records and meteorological data. To enable this to be done intelligently, and without loss of time, the observers in charge of both night-reliefs will inform themselves as to the location of these records and documents in order that access may be had to them in case of necessity with the least possible delay. A duplicate key to the fire-alarm box will be intrusted to the night-watchman who goes on duty at 6 p. m. daily, and will be transferred by him to his successor at midnight. The key to the

Digitized by Google

watch-clock will be given to the watchman once every hour, to enable him to make his regular round of duty, and will be reclaimed from him after each round. If the watchman fails to apply for the watch-key fifteen minutes before any hour during his tour of duty, the observer will ascertain at once the cause of delay, and take proper measures to prevent its repetition.

33. The duplicate key to the fire-alarm box and the key to the watch-clock will be left each morning on the desk of the officer in charge of stations.

34. In changing the large weather-maps, two sets of tags will be provided, to be used alternately. When one set is taken off, the pencil-marks upon the several tags will be removed with a moistened sponge, the tags dried and kept for use the next day. Care must be taken to write the reports accurately upon the tags, to put the proper weather-symbols at the various stations, and to change the date of report by means of the calendar over each map.

35. A record of telegraphic errors noted in translating will be kept by each observer in charge, and inclosed with the bulletin for the officer in charge of stations, to whom report will also be made of all errors or omissions on the part of any of the men on duty with him.

II.—TELEGRAPH-ROOM.

1. The telegraph-room will be under the immediate supervision of the electrician of the signal-office, who will be held responsible for the discipline of the operators and clerks therein; for the proper discharge of their duties, and for the proper record and care of all papers and reports sent to him for action.

2. Office-hours are from 7.45 a. m. to 1.30 a. m., or until the midnight report is disposed of, and the caution—"good-night"—sent.

3. The electrician will so arrange his working force that at least one operator will be present for duty at all times during office-hours, as given in the preceding paragraph.

4. He will divide the working hours into reliefs of as nearly equal length as possible, and have the operators alternate weekly in the day and night reliefs and the receipt of signals or weather-reports.

5. He will receive from the property and disbursing officer all telegraph-bills sent to this office for settlement, and after carefully and promptly auditing the same will return them with suitable remarks to that officer.

6. The general duties of the operators will be substantially as follows:

a. Receive and transmit all weather-reports and messages, including the Synopses and Probabilities sent to or from the office.

b. Enter all reports received on the regular check-sheets, and all telegrams sent and received in the books of "telegrams sent" and "telegrams received," respectively.

c. Keep wire record during receipt of reports, and also record of special weather-service.

d. Enter all check-sheets, special weather-records, and cautionary-signal orders in the books provided for these respective records.

e. File wire reports.

f. Prepare list of stations from which reports are missing at close of circuit.

7. The general duties of the clerks will be as follows:

a. Examine the mail copies of Form 5, and compare them with the telegraph copies, noting all errors, and reporting the same to the electrician.

b. Keep a record of the receipt of all mail copies of Forms 2, 5, 19, and "B," and call on the proper observers for any missing copies, using the regular letter form for this purpose, and submitting it for signature and entry to the officer in charge of stations.

c. Examine and file Forms "B" and 19, noting all errors, and reporting them to the electrician for the proper action.

d. Examine and compare statements of circuit-work performed by the several telegraph companies for the office, and report all discrepancies or errors to the electrician.

e. Keep record in proper books of all irregularities discovered.

f. File all reports in their proper places in such a manner that any one of them can be easily and quickly found.

8. Cautionary-signal orders, Synopses and Probabilities, and telegraphic orders to observers in reference to station duties will be signed by the officer in charge of stations. Other telegrams will be sent in the regular business manner.

9. The manifold copy of reports received will be sent promptly to the translating-room, and if there should be any delay in necessary reports after a sheet has been commenced, the operator will not wait to get the sheet full, but will send to the translator all on hand when the delay occurs.

10. Copies in manifold of all reports received between the regular reporting-hours will be sent to the translating and probability rooms, and to the officer charged with the preparation of the Weekly Weather Chronicle, &c.

11. When the regular circuit between New York and Chicago is broken, or communication so interrupted as to delay the transmission of reports between those points, the observer at Chicago will be directed to send them *via* Cincinnati if the delay occurs at

Digitized by Google

either the morning or afternoon report. If at the midnight report, the observer in Cincinnati will be directed to forward them to this office with his regular reports.

12. In the event of serious delay in the receipt of reports from New York over the regular circuit, the observer there will be directed to forward them by any other available route.

13. Operators in the regular New York circuit will be instructed at any time to divide the circuit whenever such a course would facilitate the transmission of the reports, and at such points as may be thought advisable by the electrician in this office.

14. The electrician will notify the proper officials of the several telegraph companies of all delinquencies on the part of their employés in connection with the transmission of signal business, keeping full copies of all letters sent in the book provided for that purpose.

15. All errors noted in observers' reports will be brought promptly to the attention of the officer in charge of stations for proper action.

16. Smoking will not be allowed in the telegraph-room.

17. Visitors will not be allowed in the room without permission from one of the commissioned officers on duty in the office, or from the electrician.

18. Enlisted men and clerks on duty in this office will not be permitted to enter the telegraph-room, except in the discharge of their duties, without proper authority, and will in all cases transact their business promptly and quietly, and leave the room without disturbing the operators more than is absolutely necessary.

III.—Lithographic-rooms.

Office-hours from 8.30 *a. m. to* 3 *p. m.*

1. The rooms will be under the immediate supervision of a sergeant, who will be held responsible for the discipline of the enlisted men employed therein, for the prompt and regular performance of their duties, for the police of the rooms, and for the proper care of the public property required in the discharge of his duties.

2. The sergeant in charge will keep a roster of all men on duty in the lithographic-room, and will note, daily, the time of arrival of each man, reporting the same weekly to the officer in charge of stations, with such remarks as may be necessay to account for neglect of duty or absence during office-hours. In case of sickness, the certificate of one of the surgeons on duty at the United States dispensary in this city must be procured and filed with this weekly report.

3. All transfers will be made by the sergeant in charge, or under his personal direction, and the original from which the transfers are made will be carefully preserved and filed away for convenient reference. He will also attend in person to drawing transfers, pulling proofs and dampening paper, and will make a check daily, showing the number of maps printed of each issue, with time of receipt of copy and of delivery to printers. This check will be delivered to the officer in charge each afternoon.

4. The large press will be used exclusively for printing the isobars and isotherms, and worked by two men, who will not be called upon to perform any other duty. The maps as struck off will be turned over to the printing-room on application.

5. One press will be set apart for making transfers and doing such small jobs as may be required from time to time. One will be used for the file copies of maps printed in two colors, and the other for printing the green maps for regular issue, of which each man will be required to print an average of three hundred copies daily.

6. The first duty of the men on reporting in the morning will be to scrape the rollers, clean the ink-slabs, and remove the resin from the transfers preparatory to printing the plain maps.

7. After the required daily number of maps has been printed, the men will again clean the ink-slabs, varnish the rollers, clean the presses, knives, and other implements used about the presses, besides rubbing out and strengthening transfers, leaving everything connected with their work in a clean and orderly condition. In addition to this, each man must, in turn, sand, polish, and deliver to the transferrer all stones that are injured under his hands.

When it becomes necessary to use one of the regular printing-presses for making transfers, the man in charge of the press will, during the time of its use for this purpose, occupy himself in sanding and polishing as many of the stones as practicable.

8. The transfers of all isobars and isotherms for the current issues of maps must be made with the least practicable delay, all other work giving way to this. The copies as struck off will be delivered promptly to the printing department for completion.

9. All errors noted in the originals furnished for copy will be promptly referred to the officer in charge of stations.

10. Care will be taken to make the lines and lettering on the maps of uniform size, from day to day, and to avoid blotting or otherwise soiling the paper.

11. All requisitions for paper, ink, and other material must be made in time to prevent the supply on hand from becoming exhausted, and will be made through the of-

Digitized by Google

ficer in charge of stations, when he is present. In his absence, such requisition will be made directly to the property and disbursing officer.

12. On Saturday of each week all maps on hand not required for use in this office will be turned over to the property-officer, with a check stating the number of same and date of delivery.

13. The proof of each transfer must be carefully compared with the original before any copies are printed for issue, and all errors found therein promptly corrected.

14. All orders for work in the lithographic-rooms will be given through the officer in charge.

15. Rooms and presses must be kept clean and in orderly condition, and all work promptly done.

16. No smoking will be allowed in the rooms during office-hours.

17. Enlisted men on duty in other parts of the office will not be permitted to enter the lithographic-rooms without proper authority.

IV.—PRINTING-ROOM.

DAY-WORK.

Office-hours 8.30 a. m. to 3 p. m.

1. The sergeant in charge will be held immediately responsible for the discipline of the men employed in the printing-room, for the prompt and accurate performance of their duties, for the police of the room, and the care of all public property therein. He will distribute the work among the men in such manner as will best secure its performance, and will see that all proofs are carefully compared with the originals and errors corrected before any copies are struck off for issue.

2. As a general rule the different men will be kept at that part of the work with which they are most familiar; but care must be taken that all are sufficiently instructed in the several duties of the room to be able to take hold of any one of them in the absence of the man specially charged with such duty.

3. Regular copy will be delivered to the sergeant in charge at about the following-named hours daily:

Bulletins for afternoon and midnight maps of day previous by 8.45 a. m.
First reports for a. m. map at 9.15 a. m.
Changes for a. m. map, 9.45 a. m.
Synopsis for a. m. map, 10.15 a. m.
Probabilities for a. m. map, 10.30 a. m.
Weather Chronicle, 11 a. m.

The copy of the "Facts and Verifications" will be received at irregular hours, being delivered as rapidly as prepared by the proper officer.

4. A list will be kept by the sergeant in charge of the number of copies of the Weather Chronicles and of each issue of the map required daily, and of the number of copies required of all other publications. This list will be printed and posted in the room, near the desk of the sergeant in charge.

5. All proofs of Weather Chronicle, Facts and Weather Review will be marked in pencil with the name of the sergeant in charge, and sent over promptly to the officer in charge of room for proper disposition; when returned the proof will be checked with the name of the officer responsible for its preparation. All other proof will be sent to the same officer, but need not be checked.

6. The morning map will be sent to press in time to have enough copies struck off by 11.30 to supply the Baltimore station, and these maps will be sent without delay to the Baltimore and Ohio Railroad depot in time to leave the city on the noon train.

The other copies for the regular issue will be printed as rapidly as practicable, and those for the office use and local distribution issued as soon as a sufficient number has been printed. Those for mail distribution will be folded in the printing-room by a man charged with that special duty, and properly prepared for the mail.

7. The regular and prompt issue of the tri-daily weather-maps is the principal work of the printing-room, and no other work will be permitted to interfere with or delay it.

8. A record will be kept by the sergeant in charge of the time at which each man reports for duty daily, and of the causes of delay or failure to report. This record will be handed to the officer in charge on Saturday afternoon of each week. In cases of sickness the certificates of the fact from one of the attending physicians at the United States dispensary in this city must be procured and filed with this weekly report.

9. All requisitions for paper, type, ink, and other necessary materials will be made through the officer in charge of room, when present, and, in his absence, to the property-officer in person. These requisitions must be made in time to prevent the supply of any article from becoming exhausted, and delay of work in consequence.

10. Three skeleton copies of each map will be struck off for use of the lithographer

Digitized by Google

who prepares the small maps for publication, with the monthly issue of facts. These maps will be filed by the sergeant in charge until called for by the office librarian, to whom they will be transferred on application.

11. A detailed record will be kept by the sergeant in charge, in a book provided for that purpose, of all work done in the room.

12. Smoking will not be allowed in the printing-room during office-hours.

13. On Sunday and official holidays the only work required, except in special cases, will be the issue of the authorized number of maps, as indicated from time to time.

NIGHT-WORK.

14. Office-hours will be from 11 p. m. until the post-office copies of the "Synopsis and Probabilities" are printed, properly enveloped and addressed, and sent to the post-office.

15. The "Synopsis and Probabilities" will be printed on flat letter-paper, and issued every morning, except on Sundays, in time to be sent off by the earliest morning mail leaving the city, as ascertained from the city postmaster.

16. The assistant to the night-observer will assist in putting up the copies for mail, and will carry them to the post-office in accordance with instructions already given.

17. Two copies of the "Synopsis and Probabilities" will be printed and mailed to each post-office on the list furnished for the information of the printer. In addition to the copies for mailing, ten copies will be printed for file, and kept by the sergeant in charge until called for by proper authority, and two copies for the officer in charge, and left on his desk by 9 o'clock each morning.

18. The night-printer will clean up and distribute the type used by him, clean the press, and cut the paper required for his work.

19. If the man charged with this duty should be taken sick during the day, or be unable from any other cause to perform it, he will promptly notify the sergeant in charge of the fact, in order that proper arrangements may be made to have the work done by some other man. If the sergeant in charge should have left the office before the receipt of this information, it will be communicated to the watch-sergeant on duty at the time, who will notify the first man on the list of printers furnished him by the sergeant for this purpose.

RULES FOR THE PREPARATION OF SYNOPSES AND PROBABILITIES.

I.—FOR THE GUIDANCE OF ALL OFFICERS, ASSISTANTS, AND OTHERS CHARGED WITH THE PREPARATION OF SYNOPSES AND PROBABILITIES.

1. The first or opening sentence of the Synopsis must always *employ a verb*, and the verb must be *in the present* or *past tense, e. g.:*

SYNOPSIS.—The barometer *has fallen* (or *is falling*) in the Northwest, &c.

The first or opening sentence of the Probabilities *must always employ a verb*, and this verb must be in one of the *future tenses*, or must distinctly refer to the *future, e. g.:*

PROBABILITIES.—In the Northwest the barometer *will rise*, or *will probably rise*, or *will have risen* by Monday, &c.

2. Attempts to devise new expressions in the weather-bulletin will not be made, and other terms than those heretofore employed to express meteoric conditions will not be used until after submission to the Chief Signal-Officer. The following expressions are approved for the occasion to which they are appropriate, viz: *Partly* (not *partially*) *cloudy* weather; *conditions indicate* (instead of *are favorable for*) *severe local storms: areas of rain* or *rain-areas* or *rain-belts; low barometer* or *storm-center* or *storm-area*; *telegraphic reports*, or *regular* (or *usual*) *morning* (*afternoon* or *midnight*) *telegraphic reports from* ——— *are not yet been received*, (or *are missing.*) "*Cautionary signals are ordered for*, or *continue at*" ——— instead of "Warning signals" or "Signals continue at ———." The expression "dangerous winds are not anticipated," will not be used. In expressing the changes in the direction of wind, the words "*veering*" and "*backing*" will be used whenever possible. The Synopses and Probabilities will be condensed as much as possible; and in order to provide against misconstruction of sentences through telegraphic errors, &c., in the Synopses, the sentences will be made to end with the name of a district or districts, when possible; but in the Probabilities, the sentences will be commenced with the words "for," "in," or "from," followed by the name of district, *e. g.:*

Synopsis for past twenty-four hours.

The barometer has risen over New England and the Middle States. It has fallen somewhat over the Gulf States and the Northwest. Partly cloudy weather and rain-areas have prevailed over South and Middle Atlantic States, with light to fresh easterly to southerly winds, which continue over former. Clear weather and light winds now

Digitized by Google

prevail over New England, northern portion of Middle States, and from central Gulf to Lakes Erie and Michigan and Eastern Iowa. Telegraphic reports are missing from stations in Texas, Upper Michigan, Minnesota, and west of Omaha.

Probabilities for coming twenty-four hours.

In New England and the northern portion of the Middle States clear weather and light to fresh winds will prevail. From New Jersey and Eastern Pennsylvania to Florida partly cloudy weather, rain-areas, and light to fresh northerly to easterly winds. From Tennessee to Lakes Erie and Michigan clear and partly cloudy weather. For the Northwest pressures diminish somewhat, with easterly to southerly winds.

3. Special attention will be given in preparing Probabilities to those divisions of the country in which post-office bulletins are distributed, giving as minutely as possible the meteoric changes to be expected within the specified time.

4. Predictions for more than twenty-four hours in the future are only to be made in cases of special importance.

5. In the morning (10 a. m.) Probabilities, special attention should be given to the ensuing twelve hours, and not to the weather of the following day.

6. In the afternoon Probabilities special attention should be given to the Southern States, and other districts where the midnight press report is not published.

7. The individual States, Territories, and lakes, &c., may be mentioned by name in the Synopses and Probabilities when the weather reports justify such minuteness, otherwise the more general geographical divisions of the country are to be mentioned; and in doing this the following terms only are allowed, with the significance given them on the map of geographical divisions, *i. e.*:

Divisions.

1. Pacific States.
2. Extreme Northwest.
3. Northwest.
4. Southwest.
5. Southern States.
6. Lake region.
7. Middle States.
8. New England States.
9. St. Lawrence Valley.

Subdivisions.

1. Missouri Valley.
2. Upper Mississippi Valley.
3. Lower Mississippi Valley.
4. Ohio Valley.
5. Western Gulf.
6. Eastern Gulf.
7. Upper Lakes.
8. Lower Lakes.
9. South Atlantic.
10. Middle Atlantic.

8. For each section mentioned in the Probabilities there will be given, if possible, the expected condition of the pressure, temperature, wind and weather.

9. When the readings of barometers are known to be constantly too high or too low, (from erroneous elevations, &c.,) the assistants making the Probabilities will agree upon the differences to be applied to them, so that the curves may appear to have been drawn by the same person.

10. In making up the Synopses special attention will be given to the *divisions* of territory, and care taken to give the *direction* in which the disturbances named are moving.

11. They will prepare, daily, a statement of those portions of the Probabilities worked up the previous day, verified, those partly verified, those non-verified, and those considered doubtful. In case they have been fully verified, it will only be necessary to state "Fully verified."

12. They will also enter on the schedule of "Cautionary Signals" the letter V, for signals verified at the station; *j*, for signals justified by reports from neighboring stations; *i*, for signals not justified.

II.—FOR THE GUIDANCE OF THE OFFICER, ASSISTANT, OR OTHER PERSON CHARGED WITH THE PREPARATION OF THE SYNOPSES AND PROBABILITIES FOR PUBLICATION.

1. He will be at the office by 9.30 a. m. and 6.30 and 11.20 p. m. of each day. On the maps used for preparing the press-reports for public issue, the observations received before the completion of the Probabilities will be entered with a *black* pencil; those received afterward with a *blue* one. He will examine the reports carefully, with a view to discover telegraphic errors, make a note of all, and call upon the telegrapher for corrections, when these are necessary, and they can be received. The telegrapher on

Digitized by Google

duty will be instructed by the officer in charge of stations to call for such corrections promptly, whenever they can be made in time to be of immediate use in the preparation of the Probabilities.

2. In order that he may be responsible for the isobars and isotherms on the maps issued from this office, he is strictly required to draw upon the maps used in preparing the Synopses and Probabilities his own isobars and isotherms in full lines of different colors, (blue and red,) except when there is any doubt, when they will be broken lines, thus: — — — —, and in doing so, to space the distance between the stations as accurately as possible. This duty must not be delegated. He will not carry the isobars and isotherms westward of the one-hundredth meridian.

3. The river-reports will be entered on the special form for that purpose, and the changes will be briefly noticed in the Synopses and Probabilities. Whenever the changes are greater than five (5) inches, he must state—"The rivers have risen (or fallen) at"—[here give the names of the stations,] or decidedly risen (or fallen) at ——; or give the number of feet when the change is remarkable. It is in the view of the Chief Signal-Officer, that the Probabilities issued from this office shall eventually comprise statements as to the probable condition of rivers, based upon the facts which will be given in the Synopsis.

4. He will add daily to the file copy of the 1 a. m. Probabilities only, "*Special for Washington, D. C.*, —— ——," and on Sundays also to the copies sent to the Washington, D. C., newspapers.

5. He will read and verify or correct the manifold copy of the Synopses and Probabilities, and attach his initials to the same, after such verification and correction.

6. The full Synopsis and Probabilities for the 7.35 (11) a. m. report will be sent to the officer in charge of the printers as soon as completed, and not later than 10.30 a. m. A single copy of the Synopsis alone will be sent to the same officer by 10.10 a. m.

7. He will call upon the officer in charge of stations for intermediate observations to be taken by the observers and forwarded to this office whenever necessary.

8. He will be held responsible for the true tracing, upon separate maps with black pencil, of the isobars and isotherms from which the lithographers make copies, and after having completed them, will write the letter *I* in blue color on the lower right-hand corner of the original maps, and attach his initials to the tracings.

9. The tracings from the original maps of the 7.35 a. m. and 4.35 p. m. and 11 p. m. reports will be made, whenever practicable, immediately after the completion of the Probabilities deduced from the reports.

Those for the morning report will be sent to the officer in charge of the lithographic-room by 10.45 a. m. daily. Those for the other two reports will be handed to the watch-sergeant on duty, who will send them to the lithographic-room by 8.30 a. m. of the succeeding day. The only exception to this rule will be made when, through failure of telegraphic communication, a sufficient number of reports are not received to make reliable isobars and isotherms, in which case the tracings of the afternoon and midnight maps may be delayed until the map for the next morning is completed.

10. On a list of the names of stations those from which reports have been received in time for use in preparing the Probabilities will be ruled out by the clerk as he enters the reports on the maps. These lists will be verified by the officer in charge of the Probabilities, and he will attach his initials thereto after such verification, and send the same to the officer in charge of the printers immediately after the tracings of the isobars for the respective maps.

11. After having written the total and partial verifications and non-verifications, and those which are doubtful, for Probabilities, he will write the letter *V* in blue on the press-report and lower right-hand corner of the map from which, together with the preceding maps, the current report was worked up.

12. Two files of the press-reports will be kept; with one the *total* verifications, partial verifications and non-verifications, and the doubtful portions; with the other, only the partial verifications and non-verifications, and the doubtful portions. The former file to be sent every morning at 11 a. m. to the private office of the Chief Signal-Officer; the latter to the officer, assistant, or other person in charge of the preparation of the Facts.

13. Cautionary signals will be ordered to be displayed at a signal-station whenever the officer in charge on the subject considers it probable that there will be experienced within twelve hours at that station, or within one hundred miles thereof, and on any navigable stream, a wind dangerous to navigation.

By dangerous winds on the navigable water will be understood those reaching a velocity of twenty-five miles an hour, as registered by the anemometer on the land, provided that the temperature be decidedly above freezing. For temperatures decidedly below freezing and for foggy weather, winds will be considered dangerous when the velocities are registered as low as twenty miles. The direction of the wind will not be taken into consideration for the present.

If at the regular tri-daily report next following the ordering up of the signals it appears that the danger is not so imminent as was apprehended, the signal will be ordered down. The signal will not be displayed for an indefinitely long space of time.

Digitized by Google

The immediate area referred to by the respective cautionary signals will be as defined on the map of cautionary-signal stations at this office, which may be generally described as a circle with a radius of one hundred miles, the station being the center.

14. Should it be found necessary to issue signal-orders, after having written the number, day, date, time, and names of the stations for "Up signals" or "Down signals" on the proper form, he will read the *number, day, date, time, "up"* or *"down,"* and *names of stations* to his clerk, the latter copying the same in the "signal-order book;" the former checking the names successively with a cross (×) above each on the original form as he reads them.

In order to verify the above, the clerk will read the *number, day, date, time, "Up signals"* or *"Down signals"* and *names of stations* from the original form, checking the names successively with a dash (—) beneath each, while the assistant, taking the "Signal-order book," will check the names successively with a cross (×) as the former reads them when verified, and will sign his name. The original form will then be sent to the telegraph-room, and the changes will also be indicated on the "Cautionary-Signal Stations" board.

15. At midnight, after completing the "press-report" and issuing the necessary signal-orders, if any, the "good-night" will be filled up, copied in the "Signal-order book," verified, and then sent to the telegraph-room.

16. On the last day of each month a list of the stations at which corrections are applied to the readings of the barometers, due to erroneous elevations, &c., with the corrections applied to same for the month, will be made up, and a copy furnished to the Chief Signal-Officer or the officer in temporary charge during his absence.

17. Whenever the conditions may be such as to indicate unusually dangerous weather on the Lower Lakes or in the Dominion of Canada, including New Brunswick, &c., he will transmit messages to Professor Kingston, observatory, Toronto, Canada, on the usual form, in the following cipher. The following words will be used for districts:

Collingwood	(for Georgian Bay.)
Saugeen	(for Lake Huron.)
Kingston	(for East Ontario.)
Toronto	(for West Ontario.)
Stanley	(for Lake Erie.)
Montreal	
Quebec	
Farther Point	
Gaspe	
Bathurst	
Shediac	(for north N. B.)
St. John	
Pictou	(for north N. S.)
Halifax	
Sidney	

The cipher words for time and date, in the cipher-book last issued from this office, will be used for the time when a storm may be expected, thus: "Storm (or severe storm) Saugeen, Collingwood, Stanley cash Toronto gaul Kingston neck Montreal Quebec eat," by which it will be understood that storm (or severe storm) is expected to reach Saugeen, Collingwood, and Stanley between 7.35 a. m. and 4.35 p. m., (Washington time,) on the 10th; Toronto, between 4.35 and 11 p. m., on the 10th; Kingston, between 11 p. m. on the 10th and 7.35 a. m. on the 11th; Montreal and Quebec, between 7.35 a. m. and 4.35 p. m. on the 11th. When danger is past, or no longer threatens any Canadian station that has been warned, a dispatch will be sent to Professor Kingston containing the following words:

1. Safety.
2. Name of station or stations.
3. Date and time, (cipher word.)

He will make copies of these messages in the same form for file, reading and verifying or correcting them, as prescribed for the verification of the "signal-orders" issued.

18. At any time when an officer, assistant, or other person at this office charged with the duty of preparing the Synopses and Probabilities for issue to the public, may be relieved from that duty, either temporarily or otherwise by another, the latter will meet the former when he shall be engaged in the preparation of his last bulletin, and fully learn the views which guide him in its preparation.

19. The assistant charged with the preparation of "Facts" for publication will prepare the remarks as to verification of Probabilities to accompany them and also the Weekly Weather Chronicle and the Monthly Weather Review. He will, as part of his regular duties, also study and analyze the river-reports received, and prepare for the Weekly Weather Chronicle a synopsis of the rise and fall of rivers, stating, so far as practicable, the present condition of the several rivers reported upon, and that prob-

Digitized by Google

ably to follow the conditions reported. In the Monthly Weather Review he will present a summary of the facts in relation to the different rivers for the month then past.

20. The manuscript copy of the Facts and Verifications will be prepared as rapidly as *the maps* and reports can be examined, and must be furnished for printing, if practicable, within three days of the date to which it refers. The manuscript copy of the Chronicles will be furnished by 11 a. m. daily; that of the Monthly Review not later than the 10th day of the month succeeding that for which it is prepared. All copy and proofs of the same will be sent to the officer in charge of the printing-room, and will be checked with the initials of the assistant responsible for their preparation.

RULES FOR THE GOVERNMENT OF THE INSTRUMENT-ROOMS IN THIS OFFICE.

1. No person unconnected with the office will be admitted to the room before 12 m., or after 3 p. m., unless accompanied by a commissioned officer.

2. The enlisted men on duty in the room will report promptly at 9 o'clock a. m., and will not absent themselves during office-hours without the authority of the officer in charge.

3. Enlisted men and messengers will not visit the room except on duty, and, in so visiting, will refer their business to the officer in charge.

4. The volunteering of information to parties not connected with the signal-service is strictly prohibited.

5. Official communications from enlisted men on duty in this room will be transmitted and forwarded through the regular military channel.

6. In the absence of the officer in charge, the ranking non-commissioned officer on duty in the room will be held responsible for the proper performance of the duties of the attendants, and will require a strict compliance with these rules and regulations.

7. Instruments will not be taken from the room without authority from the officer in charge, or the non-commissioned officer in charge during his absence.

8. No instrument will be issued or allowed to be taken from the buildings connected with the office without a written order signed by the Chief Signal-Officer, or one of the military assistants in this office, which order shall be at once filed in the property division by the officer or non-commissioned officer receiving it.

9. The sergeant in charge of the comparison and examination of instruments will have the immediate care of all meteorological instruments supplied to stations, and will issue and carefully pack them for transportation to stations, subject to the order of the officer in charge of the room. He will unpack and examine all instruments received, and report to the officer in charge their number and condition. He will have charge of the comparison of barometers with the standard, and determine the correction to be applied for instrumental error; of thermometers, hygrometers, maximum thermometers, minimum thermometers, and all other instruments with the several standards. He will have charge of the instrument records, which are as follows:

First. Record of barometer and thermometer cases and boxes issued to observers.

Second. Record of instruments received.

Third. Record of instruments issued and returned from stations.

Fourth. Record of the comparison of instruments—Green's standard barometer, Green's standard maximum and minimum thermometers, and Wild's maximum and minimum thermometers, and Glaisher's standard hygrometers and Edson's hygrodeik.

Fifth. Record of all facts relating to all instruments, and general note-book.

These records will be posted at least once a week. He will keep on his desk a "guide for examining, comparing, testing, and packing meteorological instruments."

10. The sergeant in charge of self-recording instruments and records will have the entire and exclusive management and care, subject to the approval of the officer in charge of the room, of all self-recording instruments, batteries, wires, and instrument records in the room. For general instructions as to the manner of, and time for, changing records, this sergeant will familiarize himself with "Instructions for the management of self-recording meteorological instruments at the office of the Chief Signal-Officer of the Army," and keep a copy of the same on his desk for reference.

11. The records, when taken off the instruments, will be disposed of as follows: Those from Hough's printing-barometer and Beck's aneroid barometer will have the barometric curve traced in ink, and will then be properly filed; those from Hough's meteorograph and barograph will be traced in pencil and filed; those from Beckley's and Draper's rain-gauges will be traced in ink, when rain has fallen, and then filed. The records of the Gibbon self-registering attachment to the anemometer will also be carefully examined, and all letters or lines traced carefully and plainly in ink when the original is faint or uncertain. The above files will be kept in separate drawers provided for their reception in the blank-case marked "K."

12. Extra parts of instruments, such as spindles, screws, &c., will be kept constantly on hand, and their accuracy tested by fitting them to the instruments in use or under examination. The officer in charge will make a special inspection and written report every ten days of the condition of each instrument in all its parts that are liable to wear or friction. In this report the parts of each instrument will be named, with the condition in which each part was found.

Digitized by Google

13. The watch-sergeant will report for duty at 8 o'clock a. m., and, in company with the sergeant then on duty, will inspect the instruments, &c., relieve that sergeant from duty, and take charge of the instrument-rooms, and will remain on duty until 4 o'clock p. m. He will observe that the rooms are properly swept, the instruments properly dusted, and the fires attended to. He will make an inspection of the instruments with the sergeant coming on duty at 4 p. m., and will turn over to him the keys of the room and of the fire-alarm.

14. The sergeant of the watch will not leave the building until relieved by his successor, or by proper authority, and will, when relieved, turn over to his successor all keys, records, and instruments received during his tour of duty. Between the hours of 4 p. m. and 8 a. m. he will inspect the instrument-room at least once every hour, and, in case of emergency or special service, will call upon the nearest officer for assistance and instructions.

15. The photographer will be held responsible for the proper care of all photographic instruments and material, and will receive his instructions from the officer in charge of the instrument-room. He will also keep an accurate record of all photographs taken, giving the date and number of each negative, with a proof of the same.

16. The machinist, whose duty it is to keep in repair the meteorological instruments, will report for instructions at 9 a.m., daily, during the week, and on Monday of each week will thoroughly clean and oil the machinery of the different instruments.

RULES FOR THE GUIDANCE OF INSPECTING OFFICERS OF THE SIGNAL-SERVICE, UNITED STATES ARMY.

1. The outfit of an inspecting officer will consist of the following-named instruments, in addition to the necessary blanks, stationery, &c.:

One standard mercurial barometer;
One standard aneroid barometer;
One standard thermometer;
One standard compass.

2. Upon arriving at a station he will carefully compare all station instruments with his standards, making not less than thirty readings of each instrument, and keeping an accurate record of the observations of both his own and the station instruments, and forwarding the same to the Chief Signal-Officer with his inspection report.

3. He will determine by the aid of his compass the accuracy with which the station wind-vane is placed in position upon the true meridian, and, if an error is found, will have it corrected before he leaves the station.

4. He will ascertain by actual measurement whether any change has been made in the elevation of the barometer, thermometer, or rain-gauge since the station was last inspected, and if such change has been made, will report the amount and date of the same.

5. In the event of any change having been made in the location of the office since the date of the last report, he will ascertain the exact elevation of the new office, and of the several instruments above the bench-mark of the station, as given in circular No. 2, issued from the office of the Chief Signal-Officer, under date of January 11, 1873, and is authorized to employ for this purpose, whenever necessary, the city engineer, or, in his absence, any other responsible person.

6. He will note carefully the condition of the office-room or rooms, and when they are found improperly kept or arranged, will see that the proper changes are made before he leaves the station.

7. He will examine in detail the office-books from the date of the last previous inspection, and if errors are found, will point them out and instruct the observer in charge how to correct them. In case of omission on the part of the observer in charge to keep all or part of any record, he will report the fact to the Chief Signal-Officer, with such recommendations as he thinks proper, accompanying the report with a written statement from the observer of the cause of said omission.

8. The condition of the several instruments will be thoroughly examined, and when any fault of location or want of cleanliness is discovered, will attend in person to its correction. The observer will be examined as to his knowledge of the instruments and their management in detail, and when found ignorant of any part will be properly instructed.

9. All map and bulletin frames will be personally inspected, and their condition noted from actual observation, and not from the observer's statement. The date of the several maps and bulletins posted in the frames at the time of inspection will be observed, and if the latest issue is not found therein the observer will be called to account for neglect of duty.

10. A full list will be forwarded with each report of all maps and bulletins issued at the station inspected, showing the name and local address of each person, firm, or institution receiving them.

11. The chairman of the meteorological committee or committees, where more than

Digitized by Google

one exists at a station, will be visited, and inquiry made as to the conduct of the observer and other men on duty at the station, and the manner in which they perform their special duties. Suggestions will be invited that tend to increase the usefulness of the service by a wider diffusion of the reports.

12. The amount and condition of the property for which the observer is responsible will be noted in the report, and suitable disposition of unserviceable property recommended.

13. The observer in charge will be examined as to his knowledge of the various circulars issued from the central office, and when he does not appear to understand any one or part of one, proper instructions will be given him.

14. The inspector will explain to each observer the proper manner of furnishing items of special interest in the reports to the local newspapers, impressing upon them at all times, however, the fact that these items will not be furnished when the papers can be induced to print full reports.

15. The inspection report of each station must be made out and mailed before the inspecting officer leaves the station.

16. The inspector will be present in person at all the observations made at the station he is inspecting during some one day of his inspection, and will correct on the spot any errors into which the observer may have fallen.

17. He will examine the assistants on duty at the station as to their knowledge of their practical duties, and also as to the progress made by them in the theoretical knowledge of meteorology, and will report the result of such examination to the Chief Signal-Officer.

PAPER 9.

Exhibiting the communications sent from and received at the office of the Chief Signal-Officer (exclusive of telegrams) from October 1, 1872, to September 30, 1873.

SENT.

DIVISION OF TELEGRAMS AND REPORTS FOR THE BENEFIT OF COMMERCE AND AGRICULTURE.

To heads of departments and bureaus	94	
To observer-sergeants in reference to their duties	7,843

PAPER 14.

REPORT OF OBSERVATIONS MADE AT THE ISLAND OF SAINT (BEHRING SEA,) BY OBSERVER C. P. FISH, SIGNAL-SERVICE, FROM JUNE 5, 1872, TO MAY 31, 1873.

ISLAND OF SAINT PAUL,
Behring Sea, April

SIR: This final report that I have the honor to transmit is deemed expe medium, not of exhaustive analysis or even of approximation to perfect re rather of conveying a general synopsis of the meteorological features incide area.

ANALOGOUS FEATURES OF TWO AREAS.

Naturally resembling that of the North Atlantic Ocean, the climate of Be presents but few of those more wonderful electric and other phenomena c climes; but, as fields for practical research, I can conceive of none more valu Iceland of the Atlantic and Saint Paul Island of the North Pacific. Similarly in relation to ocean currents, these areas can be readily pictured in the imag aerial maelstroms, where, throughout the year, the elements are scarcely eve and storm succeeds storm with violent rapidity and complex change.

PHENOMENA OF UPPER CURRENTS.

The arrangement of observations on the upper currents, which I have atte by no means perfect. The entries in the nephelogical and phenomenal re

Digitized by Google

rather in the form of such daily memoranda as apply to the movements of storms and the general phases attending. Voluminous as these reports already appear, a truly perfect entry would involve more rigid system, so constant is the cloudiness and various the elemental changes, and, thereby, so comprehensive the phenomena daily presented in this climate, that a record of all might discourage the most cursory review. Nevertheless, after a sort of philosophical assumption that all the obscure laws of nature, whether organic or intellectual, are to be developed during future ages, not for, but by, the mind of man, it occurs that, to establish from theories the laws governing the progression and movements of storms, research into the most minute and interior phases thereof should be prosecuted with unceasing vigor.

NEPHELOGICAL OBSERVATION.

Observations upon the clouds alone as indicative of currents and certain barometric or other conditions can be so extended that, concerning my own memoranda, I would excuse their tedious and perhaps monotonous length through evidence of their value as simply records for reference in the investigation of any one particular disturbance.

INTERIOR PHENOMENA.

Another object, independent of immediate practical value, appears in their continuance. Recognizing the necessity, in any system of observations, of a correct method at the beginning, and awaiting instructions and advice wherein I may have gone astray, I had deemed these minor phenomena, interesting as they are to myself, of considerable general value, also, as disciplining the attention and leading the perceptions more readily from effect to cause.

OBSCURITY OF CERTAIN RELATIONS.

Although a more lucid review might be anticipated from a station so distant and disconnected, any discussion of the laws governing these storms, and, particularly, the electrical condition of these centers, must be necessarily premature, if not impracticable.

ATMOSPHERIC PRESSURE.

The area of low pressure prevailing during winter over Behring Sea is certainly very extended, as evidenced by former observations at Sitka and those records from the mouth of the Anadyr which I have transcribed, and transmit for reference. This remarkable depression presents curves and variations which, although not very abrupt, are of extreme interest in connection with the atmospheric changes.

VARIATIONS OF PRESSURE.

The difference between the pressure of any two successive months, as December, 1872, and January, 1873, is often extreme and a true index of other corresponding conditions both thermal and hygrometric.

LOW WINTER PRESSURE.

It will be observed that the low average of the winter months is produced by extreme minima attending storms; in other words, the normal pressure is high. I do not here allude to those considerable periods in which the barometer has maintained a height above 30.40 or 30.50, but rather to those serene intervals in which the pressure, entirely uninfluenced by any adjacent depressions, remains, for days together, above 30.00, as in the summer months.

ATMOSPHERIC WAVES.

Otherwise than from the great daily and monthly variations, the barometric movements appear to resemble those of temperate climes. The great depressions move forward at rates varying according to that of the cirrus cloud, as indicated in nephological report, and the high intervening ranges are traced according to the lesser oscillations of the mercury that so frequently occur.

INTERIOR STORMS AND EXTENDED AREAS OF DEPRESSION.

During each of two months, December and February, depressions occurred which doubtless extended over the entire area of ocean north of the fiftieth parallel. These appeared for many days stationary, and reference to the journal indicates a series of minor depressions, to which, considering their characteristics and attending phenomena, I have applied the name and importance of subordinate "eddies," as will be noted under the head of storms.

THERMAL CONDITIONS.

The range of temperature over the area of which Saint Paul Island is representative, is most intimately related, as might be anticipated, to the extreme high degree

Digitized by Google

of humidity which prevails even through the winter months. In this element of heat we notice, particularly, the influence of ocean-currents, which appears similar to that causing the isothermal deviations of the North Atlantic.

MEAN WINTER TEMPERATURE.

The past winter is said to have been "seasonable," but a series of former thermometric records has fallen under notice which indicates that during this period a higher temperature sometimes prevails, and thus, perhaps, a lower pressure. I am confident that a series of years would throw the isothermal of 20° considerably south of this island.

RANGE OF TEMPERATURE.

The range of temperature, both daily and monthly, is subject to greater variations than in the summer season. During a period of two or three months the sea northward is completely ice-bound, whence it might be inferred that the depressions occurring on the westerly curves of storms are quite as abrupt and extreme as in the continental interior. Results do not justify this conclusion, as the thermometer rarely attains a minimum of — 10°, and it is quite evident that, during the period referred to, the island still lies within the influence of the warm currents southward, the ice-boundaries extending but a short distance in that direction.

ABRUPT VARIATIONS.

The more rapid variation occurs on the easterly quadrants of those storms from southwest, in which the indrawn southeast current causes the temperature to rise quickly to near or even above 32°.

GENERAL UNIFORMITY OF TEMPERATURE.

With exception of the less abrupt depression on the westerly quadrants produced by the northerly surface currents, the temperature remains otherwise remarkably equable, and, during even the days most free from cloud, the thermometer, if, at daylight, near or below zero, continues near that degree until the sun attains the meridian, even although it is near the vernal equinox, and the wind comparatively light.

AN ISOTHERMAL OF ALASKA.

The winter isothermal of Sitka evidently intersects this meridian about one hundred miles south of the Aleutian Isles.

THERMAL MAXIMA AND MINIMA.

The winter maximum of temperature is said to very rarely attain 40°. The minimum has never been known to extend below —14°.

HIGH TEMPERATURE OF NOVEMBER AND DECEMBER.

November and December are generally noted for high temperature, and the absence of ice during those months is naturally suggested as among the known causes in advancing, as in the interior, the winter minimum to a period one or two months beyond the solstice.

PERIOD OF GREATEST THERMAL DEPRESSION.

Casual observers have attempted to indicate the month or time of greatest cold. Without disputing statements conflicting in themselves, it is evident that this can be established only by extended observations. During the past winter March, with a mean temperature of 12°, was the coldest month; but an examination of other prevailing conditions points to this instance as possibly exceptional.

TEMPERATURE OF SURFACE CURRENTS.

I have entered in phenomenal record crude observations on the general course of temperature corresponding with surface wind. These I would henceforth discontinue as an unnecessary addition to Form 4.

TEMPERATURE OF SOUTHWEST CURRENT.

The only currents worthy of note by reason of temperature are those from southwest and east-northeast. The southwest current moves from the direction of the warm Kuro Siro; nevertheless, the southeast wind of the other southerly quadrant which frequently attends rain, no more quickly veers to southwest than does the temperature materially decrease and the rain turn to snow. The southwest wind, even when independent of its rotary relations to a storm's center, and, when once or twice observed to be permanent from that direction, is also of several degrees lower temperature than the average of the southeast current.

Digitized by Google

TEMPERATURE OF EAST-NORTHEAST CURRENT.

The temperature of the east-northeast wind exhibits a rather higher temperature, I think, than that of the current from due east; but this is a subject for further observation.

RELATIVE HUMIDITY.

The hygrometric conditions prevailing during the winter are but little at variance with those of the summer. So frequently, indeed, have degrees of saturation to be recorded, than when the difference is less than one degree, I have entered the humidity as deduced from a fractional part thereof.

HUMIDITY OF VARIOUS SURFACE-CURRENTS.

The north wind is laden with the least moisture, which is still relatively great. The following is the order in which the winds vary with reference to an *increase* of moisture: North, northeast, northwest, west, southwest, south, east, and southeast. This does not embrace, however, the east-northeast wind, which almost invariably advances a degree of saturation.

PHENOMENAL INCREASE OF HUMIDITY.

For several weeks in the fall months I noticed, during irregular precipitation, an invariable increase in humidity and the violence of the showers whenever the wind veered at all westward from due north. A column therefor was accordingly entered in one of the reports, but, after the succession of the winter months the phenomena was no longer repeated. This column I have continued, however, that it may be noted, in the ensuing season, whether such relations were purely co-incidental, or owing to sea-currents subsequently closed by ice.

ARIDITY OF NORTHEAST CURRENT—ITS RESEMBLANCE TO THAT OF WESTERN EUROPE.

The aridity of the northeast wind remains to be noticed for its remarkable correspondence to the northwest wind of the States, and its close analogy to the northeast current of western Europe. Whenever the center of a storm moves south of the island, that current is thrown into action, and its cold aridity speedily condenses the upper clouds, changes the storm "scud" stratus to characteristic cumuli, and in every manner denotes the presence of the westerly quadrants.

ORDINARY CHARACTERISTICS OF SURFACE-CURRENTS.

Concerning the winter surface-currents in general, in nautical idiom, "it is always blowing a gale." During the season of the year under consideration, the intervals between the storms are so brief, and the north winds of retreating storms so persistent, that the expression conveys almost literal truth. I have deemed it expedient to refer, in the following general manner, to the characteristics of each of these surface-currents, in order to aid in a comprehension of the ordinary winter weather of the island.

NORTH WIND.

The north wind naturally prevails on the westerly quadrants of storms, but settles more frequently in that quarter when the center passes south of the island. When the center passes north or northwest, and the wind veers by way of southeast and south, conditions, thus far, have appeared so complex and other storms so quickly succeed that the current seldom veers around as far as north, or even northwest. The north wind is characteristic in its low temperature and the irregular showers of receding storms from west-northwest. In this climate it is almost invariably attended by a cumulus which extends around the horizon, or, more usually, appears as a full, gray, monotonous stratum. This wind frequently varies or oscillates between north-northwest and north-northeast, without appearance of upper cloud or other disturbing conditions. Its velocity is usually about twenty-five miles per hour, but frequently, for days together, it moves at the rate of thirty to forty-five miles.

NORTHEAST WIND.

The northeast wind resembles that from north, but, after its speedy condensation of upper clouds, it is seldom attended by profuse showers. When persistent it is not vigorous.

EAST WIND.

The *due* east wind seldom prevails. The currents of aspiration caused by approaching storms usually spring from east-northeast, or some point to the south of east-southeast.

Digitized by Google

EAST-NORTHEAST WIND.

The east-northeast wind attends nearly all storms from the west-northw demands attention in their connection. Its average velocity is about thirty-ei an hour, but on "occasions of state," as during the storm of February 8, it as rific strength and confirms its power by hurricane violence. As in January, times continues for many days, forming, with its characteristic phenomena, the outer fringe of quadrants of storms prevailing in succession on far-distant parallels.

SOUTHEAST WIND.

The southeast wind, indrawn towards approaching storms, is frequent du months of November and December, and during some winters evidently thi the season. This current, so prevalent at Sitka, is also frequently recorde Anadyr Transcript, sometimes transferring the mercury quickly from — 30° t It seldom moves at a less velocity than twenty-five miles per hour, more gen thirty-five; and frequently, for a few hours, from fifty to seventy miles. Its duration is not so great as that of the east-northeast wind, and in the ma storms it speedily veers to southwest.

SOUTH WIND.

The south wind resembles the southeast, but is comparatively infrequent, a prevails from that direction temporarily, during a gradual veering, or, if set usually has several degrees of so-called "westing," partaking of the nature of t west wind. Its velocity is moderate.

SOUTHWEST WIND.

The southwest wind is the great surface-current pushing toward the storm that pass north of the island. It is usually the extreme limit to which the wi when other storms are about to succeed, and, with regard to its phenomena, i of strict attention. Its vigor is from thirty to thirty-five miles, although at great as sixty-five or seventy miles per hour.

WEST AND NORTHWEST WINDS.

The west and northwest currents have been, thus far, the least frequent an ous of all. General phenomena indicate these characteristics as normal, but point the evidence of those residing on the island is conflicting. The preva high westerly winds would necessitate atmospheric conditions, which are no myself, readily imaginable.

PRECIPITATION.

Observations on the character and amount of precipitation in this area are by interesting results. It will be at once noted how entirely disproportionat amount compared to the relative frequency and ominous character of cl The most profuse seldom affords a measure exceeding forty hundredths, (.40,) it frequently occurs that every day of an entire month is attended by light p tion of some form, and even if the entry of "rainy days" be restricted to which at least .01 falls, the number is surprising. A large amount of this p tion is furnished by the front quadrants of general storms, although long c showers of westerly quadrants add a remarkable share, especially during the of January, February, and March; the hail and snow of cumulo-stratus atten storm-center is by no means inconsiderable.

PRECIPITATION, IRREGULAR AND CONTINUOUS.

In phenomenal reports I have classified the precipitation as *irregular* or *co* and thus far a large portion of the latter has fallen during the night.

FORM OF RECORD.

By reason of the light quantities, resulting from showers and consequ from evaporation, I have entered the former thrice daily.

FORM OF PRECIPITATION.

By far the greater amount, during the winter months, is in the form of sno ing immediately into the sea. In continuous snow, however, the southe seldom fails to so increase the temperature that rain can and does fall at a during the season.

SIZE OF DROPS, FLAKES, AND HAIL-STONES.

The rain-drops are of comparatively small size, and never descend in torren the mainland coast or interior.

Digitized by Google

The size of snow-flakes varies as elsewhere; the fine frost-snow of the arctic regions is occasionally recorded during extreme thermal depressions, but is seldom of sufficient amount to reflect even imperfect parhelia, although sometimes descending from a cloudless sky. The hail is of the white opaque variety, termed sleet, and varies in size according to the strength of conditions hereafter referred to; the study of its texture is not to be disregarded.

SNOW-MEASUREMENTS DURING TEMPESTS.

In the journal of February 8 I have referred to the difficulty of snow-measurement in stormy climes, the frequent inutility of the rain-gauge, however admirably constructed, and the extreme care and judgment requisite for accuracy. Partial *estimate* becomes absolutely necessary during certain storms, but, in order to secure more proximate results than is usual under such conditions, I adhere to a series of *considerations* entered on the date referred to.

STORMS OF BEHRING SEA.

The subject of storms presents a field of amazing latitude, and the numerous results of records, even with the exclusion of discussion and *cherished theories*, can scarcely be all embraced in a review of this character.

Somewhere in course of reading I have noticed the assertion that the signal-service comprised, among other observers, a large proportion of *unsuccessful* merchants. Discarding, simply by allusion thereto, the unintentional animadversions, I cannot conceive how those unfortunate, *through inability*, in the maze of commercial venture, could ever anticipate success in analysis of the almost interminable series of phenomena attending atmospheric storms, and thence weave theories perfect and firm.

FREEDOM OF WINTER FROM FOG AND CONSEQUENT FAVORABLE VIEW OF UPPER PHENOMENA.

So comprehensive are the changes and attendant phenomena so openly presented to view during the winter season, are the numerous and intricate cloud-currents over Behring Sea, that a failure to obtain the secret of the causes operating to produce a storm-progressive movement alone is indicative of the innate strength of meteorological science, and declares that the attack of the very front necessitates not only the acumen of commercial talent, but all the practical tact that applies to law or mutual philosophy.

TWO CLASSES OF GENERAL STORMS.

The ordinary records point very conclusively, however, to certain general results. Of the storms prevailing during winter there are two sorts, both cyclonic; one whose general course is from west-northwest, and the other from any point between west-southwest and south.

WEST-NORTHWEST CLASS OF STORMS.

The storms from west-northwest naturally appear to proceed from near the Asiatic coast. They occur at any season of the year, but more frequently in the later months of winter, displacing, as it were, the succession of those from southwest. Their origin may be, at least, as far westward as the coast-line, inasmuch as they are of fully developed and sometimes excessive vigor on arrival at the island.

DIRECTION OF ROTARY CURRENTS—DURATION.

Although their course is occasionally from many degrees north of west-northwest, the indrawn rotary current is generally from east-northeast. When the center passes north the wind may rise from east-southeast; seldom or never from due east. The duration of this storm is from one to three days.

PREMONITORY INDICATIONS.

The manner of initiation is peculiar to its class. Two or more days of comparative inaction elapse, during which there is seldom visible, at night, any appearance of auroral glow; but, on the night preceding the storm, that phenomenon is frequently observed as recorded in journal. During the night or following day, humidity increases, the barometer falls, and, after the commencement of the rotary current, the temperature increases, though not to so great a degree as in the southwest class of storms.

CIRRUS ADVANCE.—CIRRUS OF ANOMALOUS ALTITUDE.

The cirrus advance is, through practice, easily recognized among any other clouds and frequently appears many hours previous to the barometric fall. It is sometimes accompanied by cirrus compounds and overspreads the heavens very gradually. When cirro-stratus or cirro-cumulus alone appear moving, as they never do in the commence-

Digitized by Google

ment of southwest storms, along the path ofdisturbance, those clouds, during and after extension, are sometimes obscured by a peculiar form of cirrus which must be of singularly low altitude.

PRECIPITATION ATTENDING THE EAST-NORTHEAST CURRENT.

The wind increases in this storm gradually and regularly, veering slowly at the center to north by northeast, or by south. The precipitation is remarkable for the small size and piercing character of flakes which, when fallen, have to the touch a consistence of finely ground meal or flour. It is surprising that when the wind happens to veer toward the southeast, these flakes enlarge and assume a texture as normal as when it veers the other way.

MARKED PHENOMENA OF THE EAST-NORTHEAST CURRENT.

There is another similar phenomenon incident to this storm, or rather to the east-northeast current, quite worthy of note. At a temperature as low as 22° the snow frequently turns to rain; now, we will suppose the temperature to remain uniform; if the wind veers by way of northeast the rain turns to snow, which is not remarkable, but it is certainly singular that the rain also changes to snow if the wind veers to southeast, or even approaches within 5° of east. I have even noticed, under the latter conditions, the change to snow when the temperature *increased* to 32°.

CURRENTS, AERIAL AND OCEANIC.

These phenomena seem to indicate that, eastward of this island, the warm currents of the sea are thrown over into Bristol Bay, producing there an area of increased warmth and humidity. This suspicion is supported by other phenomena that attend this wonderful storm-current. It is uncertain, thus far, whether the oceanic currents are deflected by ice toward the area referred to. These east-northeast winds occurred at a very early period during the fall. Summer observations will assist in determination.

CHARACTERISTICS OF THE EAST-NORTHEAST CURRENT.

During the prevalence of this wind fog sometimes appears from east-northeast, and whenever cumuli moving from east or northeast assume a new direction from between those points, their texture is immediately changed to the scud stratus, if the wind is violent, to the uniform fog stratus if moderate. This stratus has but little elevation, and, on one occasion, (temperature 24° and no upper clouds,) I noticed fine rain when it lay at an altitude of less than 600 feet, and when its temperature must have been 8° above that at the surface of the earth.

"FROZEN FOG."

Moreover, with this wind, a frozen precipitation sometimes appears, which the people of the island call "frozen fog."

LIMITS OF THE SINGULAR EAST-NORTHEAST CURRENT.

Such are the phenomena incident, not strictly speaking, to the west-northwest storm, but to its surface-current, and they are worthy of continued attention. They only accompany that current when the latter is from between east 8° north and northeast 10° east. The residents and natives call the storm itself a northeaster. The northeast wind is of a widely different character from the east-northeast.

MOVEMENTS OF CIRRUS IN WEST-NORTHWEST STORMS.

Although, during the passage and disappearance of this storm, cirro-stratus and cirro-cumulus conform to the new surface-currents, the cirrus-cloud itself usually retains its original direction, presenting but few of the changes and dispositions which it exhibits in storms from southwest.

FINAL CHARACTERISTICS OF THE STORM.

Storms from west-northwest do not closely succeed each other, and their westerly quadrants constitute the most lengthy periods of severity. Finally, differing widely from those of the southwest class, their precipitation is frequently light on account of the fineness of the rain or snow.

STORMS OF THE SOUTHWEST CLASS—EVIDENT ORIGIN FROM CYCLONES OF CHINA SEAS.

Presented now for consideration, the southwest class of storms includes all those violent commotions whose origin is in the vast extent of ocean lying in a direction from west-southwest to south. These are, above all others, the storms which impart to this sea its tempestuous clime, and whose midnight fury often hurls, with almost volcanic strength, the mountainous waves of ocean against the island's rocks and cliffs. Rising

Digitized by Google

from the direction of the warm Kuro Siro, or Pacific Gulf Stream, they move along its course, assuming their greatest frequency in November, and a review of their general phenomena cannot but suggest their real origin to be from those violent cyclones that curve around the China Seas.

PREMONITORY INDICATIONS.

Under a great variety of conditions do these storms appear before the island. At times, a dry, cold-appearing cumulus-stratum from north is suddenly dispersed through extension of the cirrus from southwest, constituting the storm-advance. Sometimes, though not frequently, a storm from west-northwest appears to converge on one from southwest, in which the latter asserts its superior strength, and mingles with the former or breaks it up. More frequently, however, the first indication of its approach is a cirrus-trace along the horizon. This advance is seldom accompanied by cirrus compounds *from its own direction*, as in the storm from west-northwest, but the true current of cirrus itself extends with marked rapidity and ominous aspect.

PHENOMENA OF SOUTHWEST-STORMS.

The barometric fall is proportioned to this rapidity of approach, and the attending gale from southeast attains its maximum velocity, frequently, but a few hours after the initiatory indications. Storms of this class are of comparatively brief duration.

DECEPTIVE SOUTHEAST CIRRUS-CURRENTS.

It will be noticed, in the earliest dates of the journal, that I was led into the error of supposing many of these storms to progress from the southeast. This resulted from observing, during the progress of the storm, its cirrus-stratum, or traces thereof, moving from a southeast direction, when, in reality, this new movement of the cloud was caused by its coming within exposure to the surface-current.

ORIGIN OF ANOMALOUS CLOUD-CURRENTS AND FORMATION OF CIRRUS COMPOUNDS—FREQUENT CONFORMATION OF UPPER CLOUD TO SURFACE-CURRENT.

The observations of November 18, in journal, detail at full length the manner of these singular changes and also the origin of cirro-stratus and cirro-cumulus. It is especially worthy of note that after the advance quadrants of both classes of storms have moved beyond the island and the intricate upper currents again appear, the latter frequently evince this remarkable disposition to assume the direction of the surface-wind, and the cirro-cumulus of the west-northwest storms is almost invariably thus affected. In the storms under consideration, when the center approaches, and even after the wind has veered to southwest, the traces of cirrus retain a direction from east or southeast during the period they remain in view, which is usually brief.

CIRRI OF GREAT ALTITUDE.

At this step in the storm's progress, however, on one or two occasions, light traces of cirri have been observed, of great altitude and moving along the true path of disturbance.

STORM-CENTERS OF THE NORTH PACIFIC.

But these phenomena introduce the observer to an area of the storm more calculated to arouse wonder and speculation than any other possible combination of atmospheric conditions that prevail over Behring Sea.

The elements having exhausted their fury of the easterly quadrants, the wind quickly veers to southwest, dispersing the stratus "scud;" the fragmentary traces of retreating cirrus undergo all that remarkable transformation and disposition referred to in November's journal, and then, along the southwestern horizon, glimmers the sharp well-defined boundary of the cirro-stratus whence, beyond, lies a circular area which is the wondrous sun-lit storm-centre of the North Pacific, the investigation of whose phenomena is worthy of years and wherein are concentrated all the mighty forces of atmospheric action.

PHENOMENA OF THE STORM-CENTER—SPLENDOR OF THE ELECTRIFIED CUMULO-STRATUS ATTENDING THE STORM-CENTER.

The barometer is now at its minimum, and that singular element called *haze* assumes a peculiar appearance and increases from one or two, to seven, eight, or even ten in the *scale of density*, extending, however, but little distance above the earth. The sun having appeared, the island glows with a tinge resembling that of Indian summer, and naught remains, for a few moments, but the mercury of the barometer to indicate, to the casual observer, the focus of a widely-extended cyclonic storm. And now, wide-spread throughout the heavens and jutting above the horizon in all that majesty that

Digitized by Google

nature alone can lend, frown the dense and apparently electified forms of the c
stratus. Nowhere, from the Atlantic to the Rio Grande, or from Lake Superior
north to the Bay of Mobile on the south, where in summer these imposing f
vapor mass so grandly around the horizon, assuming a characteristic density,
witnessed aught to compare, either in beauty or density, with those stupendou
mits of the cumulo-stratus which fill the centers of these November and De
storms.

CENTER WELL-DEFINED.

Confined within the limits of furious storm around, no imagination can
justice to their grandeur. Piled summit over summit they threaten every hour,
though it is, terrific thunder-showers or visible electric bolts to appal the sens
no *violent* storm issues from the vaporous battlements and lurid depths, no
electric flash ever darts from out these apparent "thunder-clouds" that seem
wandered from some tropical clime. The commanding forms move silently alo
path of progression, monuments, as it were, of the mighty force that imparted
their rocky density.

HAIL OF THE CENTRAL CUMULO-STRATUS.

At intervals, these cumulo-stratus precipitate a piercing hail, the intensity a
of which vary rather according to the strength of the general storm and the ap
symmetry of the storm-center, than the density of the immediate cloud.

"CLUSTER" RESOLUTION OF THE CUMULO-STRATUS.

It is well known that, in the interior, the electrified cumulus or cumulo-str
attended by a peculiar resolution, sometimes uniform in appearance and rese
nimbus or dense cirrus. A similar cloud transformation occurs in or near these
centers, to which I have applied, for distinction, the name of "cluster" resolut
the formation not unfrequently resembles a cluster of fruit.

ASCENDING CURRENTS OF THE STORM-CENTER.

This peculiar form, ascending and resulting from cumulo-stratus, frequently
farther and becomes a cirrus, exhibiting phenomena as described, for instance,
nal of December 16, 1872.

CIRRUS AND ITS DISPOSITION—ASCENDING CURRENTS.

Many truths, otherwise established, are confirmed by the cloudiness which
diately encircles the storm-center. As an instance, peculiar movements in an
the center of cirrus and its compounds, together with their sudden dissipation
prove the spiral movement of the indrawn currents. Again, briefly stated, asc
aerial currents of the center are indicated by the rise of cumulo-stratus into "c
resolution and, subsequently, into cirrus.

PECULIAR TRANSLATION OF CIRRUS.

Observations have revealed the singular fact that, when the center appe
upper clouds bounding it on the easterly quadrants have a frequent movemen
east, *which is only apparent*, for, in truth, a mysterious translation continues *tow*
east, or rather northeast, so that where a casual observer might anticipate
total obscuration of the heavens from eastward, he discovers, to his surprise, th
cession of all these deceptive cloud-currents beyond the eastern horizon. All t
cirri which have this apparent movement into the centre from east are dissipate
a furnace.

OBSCURITY OF PROGRESSIVE ACTION.

The unsolved question frequently recurs, what invisible force propels forw
vast concentration of elements whose upper cloud-currents indicate in the com
ment of the storm the path of disturbance, but, when bounding the center or
the western quadrants, furnish no longer any tangible clue to the direction
progressive movement?

CURRENT OF GREAT ALTITUDE FROM WEST-NORTHWEST.

In the journal of November I have alluded to the possibility of an extrem
west-northwest current which, as constant and generally unattended by clo
some connection with these storms from southwest. I was led into what was
an error by observing in the first of the series, far above the storm, cirrus from
west traces of that cloud from west-northwest. Unable to determine the relat
a current of at least five miles altitude, I abandoned, for the present, a fruitl
sideration.

WESTERLY QUADRANTS OF SOUTHWEST STORMS—SOUTHWEST SURFACE-CURRENT.

Several centers of storms fortunately passed over or near the island, occupying in translation from eight to forty-eight hours. The westerly quadrants arrive with a renewal, in most instances, of symmetrical storms of precipitation and a tendency of the wind to veer more to the west and naturally to the northwest or north. But the succession of these storms is usually so rapid and sometimes so complex that the surface-current generally remains oscillating between west-southwest and south-southwest. Its action has been found highly deserving of notice, especially in connection with other phenomena, as indicating the character of approaching changes.

EXTENDED AREAS OF BAROMETRIC DEPRESSION.

Reference to the widely extended and extreme depressions now becomes necessary in connection with this southwest current of the westerly, or rather southwesterly, quadrants. Two of these, as stated in a former paragraph, have occurred during the winter and have proved so persistent that they can, by a certain composition of science, be designated as *chronic* in contradistinction to those in which the low pressure is of little duration.

INTERRUPTION OF SURFACE-CURRENT BY CERTAIN "EDDIES" OR SUBORDINATE STORMS.

These extended depressions are initiated by a storm of ordinary violence, and the wind veers regularly from southeast to southwest. The barometer falls perhaps to 29.30, but, instead of rising, it continues low and the veering wind "halts" on attaining southwest, veering no farther. Then, on several successive days follows a *series* of storms equally severe, perhaps, with the initiatory one; but, during each of these, the mercury falls a few tenths (say to 28.80) from the *established* low pressure of 29.30, which latter height is regained in the intervals between the storms. The latter bear every characteristic of subordinate "eddies" in a *general* depression. The spaces between these are ordinarily occupied by the dense cumulo-stratus, which, however, is not so well defined as in a single symmetrical storm.

ROTATORY CURRENT OF GENERAL DEPRESSION.

What supports this affirmation of *interior eddies* is that, after each one, the wind having, previous to its appearance, been naturally *drawn back* to the southeast, advances, *after veering*, farther and farther toward due west, so that when the last *interior* storm has disappeared its direction is fully west, if not west-northwest, just as if the great rotatory current of the general depression had been gradually veering during all these days from southwest to west-northwest or north.

STORM-WAVES.

It is the occasional violence of wind attending the westerly quadrants of these storms from southwest that produces the light storm-waves referred to in journal.

INFERIOR BUT EVIDENTLY DISTINCT CLASS OF STORMS.

There is one other inferior sort of storm from southwest that appears to be independent of the general class of southwest disturbances, as occurred during the latter days of February. These sometimes precipitate considerable, but are light and unattended by the phenomena of other storms, or even a change of wind.

NEPHELOGICAL PHENOMENA—FREQUENCY OF CLOUDS—RECORDS OF REFERENCE.

Close attention has been devoted to the subject of clouds. Any possible connection between a study of their texture and the practical concerns of life is, doubtless, to the world at large, a matter of merriment. Whether or not, for assistance in the operation of more practical laws, the very texture of clouds varies and consequent research thereinto is at present requisite, it is beyond a doubt that, owing to their great relative frequency over Behring Sea, they are faithful indicators of the upper aerial currents, and I have therefore ventured to classify, and enter for reference, their phenomenal indications as far as they can be made to bend toward the solution of questions that may yet arise.

CAPTION OF REPORT.

For the caption of this report, which includes only observations on the clouds, I have selected the word "*νεφέλη*," and, under the impression of having seen the derivative, *nephelogical*, I deemed it admissible.

CONCERNING RECOGNITION OF ATMOSPHERIC CONDITIONS BY MEANS OF CLOUD-TEXTURE.

It has been impracticable, as in the instance of the cirro-cumulus, to enter rigidly in Form 4. Without attempting, at present, ulterior deductions from the brief records thus far at hand, I would note the important truth, doubtless already known, but developed particularly in this area, that similar conditions in the progress of, or intervals between, all storms are characterized by corresponding aspects of cloudiness.

Digitized by Google

CORRESPONDING NECESSITY OF EXTENDED CLASSIFICATION—CHARACTERISTIC FORMATIONS IN CLOUDS.

This undeniable premise involves a most extended classification, which, nomenclature, I have, during the winter, mentally performed. Thus, (excludi bus,) the remaining six cloud formations, notwithstanding their *apparently* innu and kaleidoscopic variations, present, each one, under appropriate barometric a conditions, either present or approaching, such marked and distinctive asp texture as to be readily recognizable on future occasions. For instance, cumu southeast differs entirely from that moving from north, and cumulus from nor of the appearance of that from northwest or west. Cumulus as a complete with no upper cloudiness is of an aspect widely different from that of cumul cirrus or cirro-stratus lies above. The other clouds are susceptible of a similar cation; and, in truth, there are no less than forty different strata which I reco conforming to or heralding corresponding atmospheric conditions.

LACK OF NOMENCLATURE.

To this subdivision there is an evident limit, and a general nomenclatur various sorts would materially condense the cloud-records of the accompanying

PRINCIPAL VARIETIES OF CIRRUS CLOUDS.

The cirrus cloud of Behring Sea is particularly remarkable for three referred to: 1. That constituting the storm-advance. 2. A stratum of in texture combined with cumulus as noted on September 25, 1872. 3. A sort tha bles haze, but of much greater density and obscuring cirrus compounds, so assuming a smoky or red appearance. This latter variety has been frequently o with a remarkable striation, the lines extending precisely into magnetic north.

"CURTAIN" CLOUD.

The cirrus cloud, nearly losing its identity before an *interior eddy*, was obse one occasion, to resemble a cluster of grapes, or rather *curtains* irregularly loo was naturally followed by rain.

PRACTICAL VALUE OF CIRRUS OBSERVATIONS.

I have also referred, in journal, to the apparent practical value of observa the cirrus cloud. This appears extreme when stations sea-ward do not or cann

MANNER OF GENERAL CLASSIFICATION—CIRRUS CLOUD ALWAYS WELL DEFI TEXTURE.

Lest the classification of clouds in the accompanying records appear obscu error, I venture the sacrifice of brevity, and would state that I have conside cirrus cloud as retaining its identity so long as it does not undergo that sing well-known resolution into the aqueous or, so to speak, *melted* texture that chara other clouds. It appears entitled to its identity from its first appearance as transparent stratum up through its various stages of increase, to the time of a massive density which, without the intervention of any compound clouds wha sometimes seen before precipitation. I am aware that in these stages of incre sometimes called a stratus, cirro-stratus, or whatever name seems more eup when none of these latter have appeared. By the way, lack of discrimination the two clouds, stratus and cirro-stratus, is, in itself, manifest error.

CIRRO-STRATUS AND STRATIFIED CIRRUS.

Stratiform cirrus I have *not* designated cirro-stratus, as the cloud, by that disposition of its texture, loses neither identity nor title.

STRATUS.

Stratus has been limited to two varieties: "scud" and the slightly-eleva stratum, as it appears previous to ascent and resolution into cumulus. (Two only in *this* climate.)

RELATIONS OF CUMULUS CURRENT.

For mere convenience in the journal I have referred to the cumulus as a lowe The distance to the nearest upper stratum of cirrus or its compounds is always erable; moreover, in all movements of upper strata the relations of the thereto somewhat resembles those of the "scud" stratus, both being generall on by the surface-wind, invariably when the latter is of any strength.

CIRRUS COMPOUNDS.

It is perhaps unnecessary to assert accuracy in cirro-stratus and cirro-c which necessitate the constant exercise of delicate judgment.

Digitized by Google

FOG.

But little fog prevails during the months from October to April, inclusive. This form of cloud will be thoroughly examined with regard to its proportion to other cloudiness during the ensuing summer. A review of the reports proves the *upper* clouds, as well as the lower, to conform *very* frequently to the direction of the surface-current.

PHENOMENAL RECORD.—STORM-CENTERS OF BEHRING SEA AS CIRCULAR RESERVOIRS OF ELECTRIC FORCE.

The phenomenal record embraces observations on certain elements whose relations are still in comparative obscurity. The action of some unknown elements on the very texture of all *clouds*, under whatever phases they may appear, presents itself as a subject for close research and extended observations. Whatever may be the subtle nature of that which we designate electric force, and however this may be overladen with wandering, homeless theories, the most casual observer might, if thereto inclined, recognize the centers of all the southwest Pacific storms as vast *reservoirs of electricity*. These storm-centers, with their piercing hail, peculiar haze, and the wondrous density and grandeur of their cumulo-stratus, offer certain and visible proof of electric action to a high degree, and form a secure base for attack on the primary causes of progressive movement. That a more thorough analysis of the attendant phenomena, assisted, if necessary, by magnetic and other apparatus, would result in more definite conclusions, is beyond a doubt.

AURORA POLARIS.

The atmospheric conditions over Behring Sea, in connection with the infrequency of the phenomenon now referred to, are particularly favorable for tracing auroral relations to storms. Throughout all this area the cloudiness is so frequently broken that but few nights pass without rifts in magnetic north. The phenomenon, whenever it appears, is of very moderate intensity, and only under certain conditions is it visible at all, even through the clearest skies.

AURORAL RELATIONS TO ATMOSPHERIC ACTION.

The absence of aurora during the serene intervals of westerly quadrants of storms, the extension of peculiar *luminous haze* or *electric light* immediately preceding storms, and the diffused glow of the aurora discerned through rifts, or even dense clouds that accompany, are all relations constantly indicated by the journal and records. I doubt if a single storm has passed the island during the winter without the appearance, although perhaps obscured, of auroral light.

INCIDENTAL DEDUCTIONS.

It is, perhaps, rather foreign to logical or inductive conclusions, but a convincing proof, to my own mind, of a close connection between the aurora and atmospheric storm is, that whenever the display appears through a sky free from upper cloud I turn *mechanically* for the appearance of cirrus traces from beyond the Western Sea; and this quasi acknowledgment is more significant from the consciousness of having continued the winter observations without the slightest pre-determination.

ILLUSTRATIONS OF AURORAL RELATIONS.

With references at hand for the entire winter, I cannot but allude to the long period of inaction during the month of March. The heavens were sometimes partially and frequently almost clear, but no trace of aurora was visible, except on March 3; and how significant is the entry, in adjacent columns, that at this time the monotony was interrupted by those disturbers of atmospheric peace—the cirrus and cirro-stratus. After the termination of the long interval referred to the aurora, later in the month, was also visible in evident connection with storms, as entered in phenomenal record.

EVIDENCE OF JOURNAL AND RECORDS CONCERNING AURORA.

The records of the entire season multiply these evidences; but lest future observations should fail to confirm the significance of the past, I have alluded to the aurora in this cursory manner, well aware that if the laws of atmospheric action and auroral phenomena are found to be intimately woven, the field of research, lying beyond this single but important premise, is still unbroken, although perchance quite as attractive as the visible phenomena that point it out.

HAZE—ITS RELATION TO STORM-CENTER.

Concerning the relations of haze, results from the storm-center induce certain immature suspicions that would scarcely coincide with any one of many accepted conclusions. I have entered observations thereon in phenomenal record, and, affixing a scale

Digitized by Google

of density, find that this element attains a *great* density only in or near a s
tral area. No evident relations between this haze of the center and the s
yet resulted—in fact, the latter phenomenon does not appear in a storm's f
no less evident that there *are* relations, and those of an interesting nature.

GENERAL ELECTRIC PHENOMENA—OCEANIC AREA OF NON-DISPLA

This climatic area compares with all the continental western coast in fre
thunder and lightning, of which there is no instance thus far recorded in re
area of the ocean and Behring Sea, in which these electric phenomena ar
rare, has evidently no boundary on the north, extends as far as Petropaulo
west, and far into the Pacific Ocean on the south.

GENERAL PHENOMENA OF RECORDS.

Many other phenomena worthy of notice, however, have occurred during
As an instance, a remarkable alternation between hail and snow, succee
evening by aurora in connection therewith, is entered in journal of Octob
No one can turn the pages of such a continuous record without perception
portionate results; but, as *meteorological* investigation particularly demand
intended, I would repeat, for reference alone.

GENERAL REFERENCE TO RELATIONS OF OCEANIC AND CONTINENTAL S

The relations which the great storms prevailing over Behring Sea bear t
vancing over the continental interior are, by reason of the interposition of
chains, comparatively obscure. Those moving from a southwesterly direct
tate heavily on the mainland coast, but whether their barometric wave
the interior of British America, and thereby modify or act on those of
States, is a question that, even were I already versed in the dynamic
storms, lies beyond the authority of this report to solve. I fear that simp
to these relations is premature, if not, forsooth, unwarrantable, assumptio
theless, is it not possible that any one of the violent storms of that class
northwest may, although yielding its moisture to the mountains, successful
its remaining forces over beyond those elevated chains, and then, forming
the eastern plateaus, and gradually collecting new conditions of cloud and
move forward to the Atlantic coast, retaining, as it were, the barometric lif
rior causes of progression that originally forced the storm over the waters o
Pacific?

Labyrinthian as these currents and waves of atmospheric action now
secrets of their relations cannot be quite invulnerable. Analogous currents
lantic Ocean and the dependence of European climate thereon open a route
which will doubtless penetrate any obscurity thrown over it by the confi
our mainland coast.

The climate of St. Paul Island closely resembles that of the ocean distric
Iceland is representative; and the day is evidently approaching when th
growth of Pacific commerce and navigation will so encourage practical m
that a satisfactory reply can be given to the natural inquiry—Is the area n
Atlantic Isles a key to any class of American storms?

I am, sir, very respectfully, your obedient servant,

CHAS. PATTISO

The CHIEF SIGNAL-OFFICER, U. S. A.,
Washington, D. C.

PAPER 15.

REPORT OF METEOROLOGICAL OBSERVATIONS MADE AT MOUNT WASHINGTON, NEW HAMPSHIRE, DURING THE MONTHS OF MAY AND JUNE, 1873.

WAR DEPARTMENT, OFFICE CHIEF SIGNAL-OFFICER,
DIVISION OF TELEGRAMS AND REPORTS FOR
BENEFIT OF COMMERCE AND AGRICULTURE,
Washington, D. C., August 15, 1873.

SIR: I have the honor to submit the following detailed reports of the special meteorological observations made in compliance with your instructions, at Mount Washington, New Hampshire, from May 1 to June 30, 1873. Two stations were occupied during May, and four during the month of June, and, in addition to their records, the regular observations made for the same period at Portland, Me., are given for purposes of comparison.

Instruments used at the several stations.

NO. 1.—SUMMIT.

Barometer No. 1797, (Green's;) instrumental error, —.005.
One extra barometer; not used.
Two standard thermometers, (Signal-Service pattern, Green's.)
One maximum and three minimum thermometers, (Green's.)
One standard hygrometer, (Signal-Service model, Green's.)
Two Robinson anemometers, (Signal-Service model,) with electrical attachments for self-registration.
Two wind-vanes, (Signal-Service model.)
One rain-gauge, (Signal-Service model.)

NO. 2.—RAILWAY-CAR STATIONED ABOVE JACOB'S LADDER.

One barometer, No. 184, (Green's;) instrumental error, —.028.
One extra barometer; not used.
Two standard thermometers, (Signal-Service model, Green's.)
Two hygrometers, (Signal-Service model, Green's.)
One Robinson anemometer, (Signal-Service model.)
One wind-vane, (Signal-Service model.)
One rain-gauge, (Signal-Service model.)

NO. 3.—WAUMBACK HOUSE.

One barometer, No. 186, (Green's,) instrumental error, —.011.
One extra barometer; not used.
Two standard thermometers, (Signal-service model, Green's.)
Two standard hygrometers, (Signal-service model, Green's.)
One Robinson anemometer.
One wind-vane, (Signal-Service model.)
One rain-gauge, (Signal-Service model.)

NO. 4.—BASE OF MOUNTAIN.

One barometer, (Green's,) No. 139; instrumental error, —.010.
One extra barometer; not used.
Two standard thermometers, (Signal-Service model, Green's.)
Two standard hygrometers, (Signal-Service model, Green's.)
One Robinson anemometer, with electrical attachment and standard Signal-Service register complete.
One wind-vane, (Signal-Service model.)
One rain-gauge, (Signal-Service model.)

The barometers were carefully compared with each other after arrival at the mountain, as shown in Sergeant Thornett's report, Paper "D," and also, after their return to this office, with the standard instrument. As the result of the latter comparison the errors of the barometers used at stations Nos. 2 and 3 were found to be as follows: barometer No. 184, —.028; barometer No. 186, —.011. Barometer No. 186 was turned

e observer in charge of the summit-station in exchange for a defective barom-
s, and therefore its final error has not been determined.
A, B, and C show the instructions given the several observers; Paper D, the
port of Sergeant Thornett, and Papers E and F his monthly journals for May
Paper G is the journal of Sergeant Seyboth at the base station; Papers H
record of minute observations for May and June; Papers K and L, the record
urly observations for the same period, and Paper M the Portland observa-
which those made at 8.02 a. m., 5.02 p. m., and 11.27 p. m., were synchronous
e made at Mount Washington at 7.57 a. m., 4.57 p. m., and 11.22 p. m.
y respectfully, &c.,

H. W. HOWGATE,
Second Lieut. and Brt. Capt. U. S. A., Acting Signal-Officer and Assistant.
ig. Gen. ALBERT J. MYER,
hief Signal-Officer, U. S. A., Washington, D. C.

A.

WAR DEPARTMENT, OFFICE CHIEF SIGNAL-OFFICER,
DIVISION OF TELEGRAMS AND REPORTS FOR
BENEFIT OF COMMERCE AND AGRICULTURE,
Washington, April 19, 1873.

NT: Two series of special observations will be made during the month of May
ation, in connection with a station at the base under charge of Sergeant Sey-
se observations will be made at the times and in the manner set forth in the
py of Sergeant Seyboth's instructions, which will apply to your station as
r as the making and recording of the observations are concerned. The ex-
ained by you last year in connection with a similar enterprise will enable you
any difficulties encountered at that time, and to render valuable assistance
y at base. Your attention is called especially to the instructions in reference
ite observations to be made for one hour each day, and the times indicated.
ar reports will be kept up as usual.
r respectfully,

H. W. HOWGATE,
Second Lieut. and Brt. Capt. U. S. A., Acting Signal-Officer and Assistant.
R. THORNETT,
ount Washington, N. H.

B.

WAR DEPARTMENT, OFFICE CHIEF SIGNAL-OFFICER,
DIVISION OF TELEGRAMS AND REPORTS FOR
BENEFIT OF COMMERCE AND AGRICULTURE,
Washington, D. C., April 19, 1873.

T: A series of observations at the base of Mount Washington, in connection
ation on the summit of the mountain, will be made under your supervision
month of May next, beginning at 6 a. m. of the 1st, and terminating at
of the 31st of the month.
rvations of all instruments will be made daily at the following hours, (local
m., 2 a. m., 3 a. m., 4. a. m., 5 a. m., 6 a. m., 7 a. m., 7.57 a. m., 9 a. m., 10 a. m.,
m., 1 p. m., 2 p. m., 3 p. m., 4 p. m., 4.57 p. m., 6 p. m., 7 p. m., 8 p. m., 9 p. m.,
1.22 p. m., and 12 midnight, making twenty-four observations each day.
rvations will be the same in all respects as those taken at regular stations,
e entered in the usual manner upon Forms 4, which forms will be brought
erson to this office, when ordered in, unless otherwise instructed. In addi-
e full observations, a special series will be made of the barometer alone,
s of one minute for one hour daily.

Digitized by Google

From the 1st to the 10th days of the month, inclusive, these special obs
begin at 8 a. m., and continue until 9 a. m.; from the 11th to the 20t
month, inclusive, they will begin at 2 p. m., and continue until 3 p. m.;
21st to the 31st of the month, inclusive, will begin at 9 p. m. and termina

This series of observations will be kept distinct from that made hourl
recorded on separate sheets of Forms 4. If it is found that there is not s
to fill up the Forms 4 on station, besides attending to the other necessa
part of the duty can be left until the return of your party to this city, bu
nal Record" must be carefully kept, and the observations entered wh
directed in the instructions heretofore issued from this office.

Especial pains must be taken to make these readings accurate to thous
inch, and the temperature of the attached thermometer will be noted a
part of each observation. Upon your arrival at the base of the mountai
once establish telegraphic communication with the observer at the sumn
this purpose the cable over which the regular reports from that station
will, if practicable, keep this communication unbroken during the whol
remain on duty at the lower station.

You will personally compare the two barometers furnished you by th
the standard barometer at the summit-station, noting carefully the differ
readings, and reporting the same on the sheet of Forms 4, used for the firs
of observations. This comparison of barometers must be made before the
ing the first observation. As the observations at both stations must be
the time-pieces used will be carefully compared and adjusted before the
are commenced, and after that time will be adjusted three times daily,
at intervals of eight hours each, as arranged by you with observer in char
station. Two minutes before the time for taking each hourly observa
call up the observer at the summit-station, and after getting his ackn
will prepare for taking the observation. The signal for reading the baro
sent from your station one minute before the time for each reading, an
ments will be read in the following order:

1. Attached thermometer.
2. Barometer.
3. Exposed thermometer.
4. Hygrometer.
5. Anemometer.
6. Wind-vane.
7. Rain-gauge.

The two assistants detailed for duty with you have been selected for
account of their previous good conduct and the ability they have shown
agement of regular stations. It is believed that either of them can safe
to make the observations alone during a part of each twenty-four hou
lessen your own labors materially. You will therefore divide the day int
of eight hours each, taking one tour yourself, and assigning one to each o
ants. The responsibility of keeping the records, of insuring the accuracy
vations, and of making such reports of them to this office as may be ca
devolve upon you, and the work must be done with this fact kept consta

The following instruments and supplies will be furnished you at this of
be taken to the station under your immediate charge:

2 barometers.
2 thermometers.
2 hygrometers.
1 anemometer, (self-registering.)
1 wind-vane, (small.)
1 rain-gauge.
1 box-sounder.
15 cups Daniell's battery.
200 feet insulated wire.
30 pounds sulphate of copper.
Full supply of blank books, Forms 4, stationery, &c.

The wind-vane and anemometer can be exposed on the roof of the
House, and the rain-gauge in an open space near Marshfield, wher
readily accessible at all hours. The other meteorological instruments
posed in the telegraph-office, where the telegraph instrument can be put in
circuit for exchange of signals or other communications by means of the
in the office. Board for yourself and assistants can be had from Mr. N
larvy, in charge of railroad-station. Mr. Aiken, of the Mount Washingt
has kindly given this office permission to use such facilities at the statio
necessary to carry out your instructions in this matter. You will be careful
buildings and other property of the railroad company occupied or used by
party in as good condition as you found them. On the completion of th

Digitized by Google

forth in this communication, you will remain at your station until orders and transportation are received from this office, but need not continue the observations after the 31st of May, unless otherwise instructed before that date. Should one or more of your party become sick, or in any way become unfit for duty, the fact, with nature and probable duration of illness or injury, will be promptly reported by telegraph to this office, in order that suitable action may be taken about supplying additional assistance, if necessary. The value of these special observations depends wholly upon their being made synchronously at the upper and lower stations, and especial attention must be paid to the accurate comparison of time, as before ordered.

Very respectfully,

H. W. HOWGATE,

Second Lieut. and Brt. Capt. U. S. A., Acting Signal-Officer and Assistant.

Sergt. ROBERT SEYBOTH,
Washington, D. C.

C.

WAR DEPARTMENT, OFFICE CHIEF SIGNAL-OFFICER,
DIVISION OF TELEGRAMS AND REPORTS
FOR THE BENEFIT OF COMMERCE,
Washington, D. C., May 24, 1873.

SERGEANT: The special series of observations ordered for the month of May at your station, and that at the base, as per inclosed copy of instructions, dated April 19, 1873, will be continued during the month of June at the same hours and times as set forth therein at both stations, and also at the two new ones to be established June 1, as per order of this date. All these stations will be under your general supervision, and you will be held responsible for their successful management and working. The two new ones will be connected by telegraph with the present stations, putting the instruments sent for them on the line, there being battery enough now there, it is believed, to work all satisfactorily.

As it is desirable to have the stations as nearly equidistant from each other as practicable, it is suggested that No. 2 be put at the "Gulf tank," and No. 3 at the "Waumback," if it can be done so as to work properly. If this cannot be done, you will do the next best that is practicable, and report your action, with locations selected, to this office. You will see that full and complete records are kept of all observations at the several stations, and that they are brought to this office as per original instructions. The *minute* observations will be made at the same hours, and on the same days of the month, as ordered for May.

Very respectfully,

H. W. HOWGATE,

Second Lieut. and Brt. Capt. U. S. A., Acting Signal-Officer and Assistant.

Sergt. A. R. THORNETT,
Mount Washington, N. H.

D.

SUMMIT OF MOUNT WASHINGTON, NEW HAMPSHIRE,
June 5, 1873.

SIR: Acting under instructions from the Chief Signal-Officer, I made application, in the latter part of last month, to Mr. Walter Aiken, of the Mount Washington Railroad Company, for permission to occupy two points on Mount Washington, New Hampshire, as signal-stations, during the month of June, 1873, for the purpose of making a series of special meterological observations.

Mr. Aiken responded by placing the "Waumback House" at the disposal of the

Digitized by Google

signal-service for the time and purpose above mentioned; as also a rai altered as to form a tolerable protection in ordinary weather, which was b the base and placed on the upper ledge of "Jacob's Ladder," in juxtapos two-mile post.

The assistant observers sent to fill the new stations arrived in Littl on the 28th of May, and I telegraphed to Private Allen L. Bowie, di not to leave that town without first assuring himself that the stores and n property, purchased for the comfort of the men, had been forwarded to t the articles were not ready for transportation, Private Bowie considere reach the base of the mountain without delay, and trust to the promises o men to have the freight forwarded in good season. But, after waiting unt ing of the 31st of May, I was obliged to take a team from the base, and, over-night, succeeded in furnishing the stations on the 1st of June.

On May 30 the stations were opened, and instruments mounted. Tel munication was established, on the same day, by running the cable int and attaching it to the box-sounders brought from Washington. Supplies and I filled up the time in passing between the stations to satisfy myself important had been forgotten.

The barometers were compared with those at the base and summit stat 31. The following are the uncorrected readings of the several instrument

time a steady decrease of pressure was observed, and at midnight the
gave a reading of 29.82; mean barometer, 29.956. The temperature wa
24° and 25° until 6 a. m., and then steadily increased to 32° at midday.
decrease took place through the rest of the day, to 25° at last observa
thermometer, 28°.0. The wind continued to blow steadily from the west
early part of the day, became fitful in the early afternoon, backed to s
at 1.30 p. m., and remained so for the rest of the day. Brisk and fresh vel
to a moderate gale at night. The wind moderated very preceptibly throu
light hours. Fair weather up to 1 p. m., when the clouds descended and
mountain, culminating in a steady fall of light snow at 2.45 p. m., whic
all day. At 4 a. m. a small quanty of cirro-stratus clouds was observed;
place to a large quantity of cirro-cumulus at 6 a. m., which in time gradu
distinct formation and became absorbed in a uniform veil of stratus in the
of the forenoon. The upper clouds moved with the prevailing wind.

May 3.—The barometer continued falling to 29.70 at midday, and the
nearly steady until 9 p. m., when the mercury gradually rose to 29.76 at la
tion; mean barometer, 29.716. The temperature was steady at 24° and 2
m., then gradually decreased to 19° at midnight; mean thermometer, 22°
to 4 a. m. the wind oscillated between the points of south and east, settlin
4.50 a. m.; between 6 and 7 p. m. it suddenly chopped round to northwes
north shortly after, and remained steady for the rest of the day; moderate-g
prevailed through the early part of the day, gradually rising, as evening a
a storm, averaging sixty miles per hour. Snow ceased falling at 1.25 a. m
weather continued threatening until it recommenced falling lightly at 6.15
continued until 6.10 p. m., when the wind, suddenly changing to the
brought clearing weather. The clouds rose rapidly above the summit, and
sive view of the surrounding country was obtained. As night approached
(stratus) gradually contracted, so that about one-half of the sky was visib
weather set in. The mountain is now covered with snow to a considerable
some places the drifts are almost beyond measurement, rising and falli
waves from "Jacob's Ladder" to the summit. Below "Jacob's Ladder"
varies from 2 to 8 or 9 feet, but shows signs of breaking up.

May 4.—The barometer rose gradually to 29.92 at 4 p. m., and then fell
midnight; mean barometer, 29.849. The temperature was very steady u
at 20° and 21°; rose to 24° at 11 a. m., where it remained steady until aft
then steady at 23° until 6 p. m., and at 22° for the rest of the day. Mean th
21°.7. At 6.30 a. m. the wind backed from north to northwest, and to west
m., blowing steadily from the latter quarter up to midnight. Storm veloc
to "high" and moderate "gale" through the middle of the day, but rose to
per hour in the afternoon and late at night. About one-quarter stratus c
upon the horizon in the early morning. This gradually disappeared, and f
until 2 p. m. only a slight haze (below the summit) thickened the atmosphere
2 and 3 p. m. cumulus clouds, moving from the northwest, partially cover
but were dissipated a little before sundown, and clear weather prevailed
little before midnight, a small quantity of stratus appeared first above the

May 5.—The barometer continued falling to 29.82 at 5 a. m.; after that h
(irregularly) through the day to 30.08 at last observation; mean barometer, 2
temperature fluctuated but very little. It was steady at 22° from midnight
at 23° from 10 a. m. to 5 p. m., and then gradually decreased to 20° at midni
thermometer 21°.7. A very steady west wind all day, changing by northwe
at night. Up to 9 a. m. we experienced heavy gale and storm velocity, w
ually abated during the forenoon, and settled to a brisk wind in the early
From 4 p. m. the velocity oscillated between brisk wind and moderate gal
rising to a heavy gale at 11 p. m. Fair weather opened the day, but tow
dense masses of cloud accumulated over and around the summit. At 3.45
began falling steadily, and continued until 10.30 a. m. Cloudy weather
p. m., when the clouds appeared to be thinning, and shortly after 2 p. m
above the summit, showing about three-fourths cumulus moving from the
clear atmosphere below. The clouds gradually disappeared as the day pass
a slight haze hanging over the country below the surrounding summits, and
set to midnight the weather was clear. For several weeks past we have e
considerable difficulty in cutting our way out of the depot and in lettin
through the windows. Enormous drifts of snow have formed about the bui

a passage is cut out, and the windows cleaned, the wind drives in the snow the gaps, so that the force is usually divided into cook, observer, and snow- consequently time does not hang very heavily upon our hands. The temper- been, and is, so constant below 32°, that it is difficult to say when this us state of things is going to change. One drift reaches more than half way of the depot.

-The barometer rose to 30.21 at midday, and the readings showed very little during the remainder of the day. The instrument gave evidence that the f the atmosphere was very uneven, and a great deal of care had to be exer- le the minute observations were being made, to insure a correct record of the the mercury, which was continually oscillating and balking the eye of the At this station we frequently experience similar trouble. Mean barometer, he temperature was steady from 19° to 22°. It increased from 19° at 1 a. m. a. m., stood steady at 22° until 7 p. m., and then gradually decreased to 20° ht. Mean thermometer 20°.5. The wind continued from the north with e velocity, until it changed rapidly to west between 1 and 2 p. m., and that point for the rest of the day. At sunset the velocity decreased to high shortly after increased to a heavy gale, and between 11 p. m. and midnight maximum for the day of sixty miles per hour. Clear weather prevailed. A which hung over the country below the summits in the early part of the ne very dense as daylight ended. The atmosphere was comparatively clear m. The only clouds that were to be seen were a few isolated stratus, which now and then through the day, and always near the horizon.

-The barometer rose to 30.41 at last observation. Mean barometer, 30.380. rature decreased to 19° at 3 p. m., and remained steady until after 6 a. m., eady increase set in, the mercury jumping from 24° to 28° between 10 and 11 to 32° at 12.22 p. m. From 1 p. m. a gradual decrease took place, and at the thermometer read 26°; mean thermometer, 26°.2. The wind continued vest until 6 a. m., and then gradually veered round by northwest to north, ed to west at midday, and continued so until it died away to "calm" at 7 tly after a breeze sprang up from the north, when it remained steady for the day. Storm velocity steadily diminished to a fresh breeze at 9 a. m., and l calm at sunset. From the time that the north wind arose in the evening y steadily increased to "brisk," and varied but very slightly through the day. Throughout the twenty-four hours the lower country was covered t haze, and a few cirro-stratus clouds appeared and disappeared at intervals ours. The sun's heat is beginning to make a decided difference in the ap- f the mountain. A large quantity of snow has melted within the last two he railroad-track is steadily emerging from its winter covering. The rocks g out, and a few days of fine weather will leave them comparatively clear. p. m. the horizon between the points of north and northwest was fringed roral belt, which had the appearance of a lambent flame of a deep-red color , and of a light yellow at the tips. The aurora was almost stationary, re- h little apparent change for nearly thirty minutes, and then gradually died

The barometer remained stationary at 30.38 to 30.42 until 3 p. m., and then dropped to 30.31 at midnight. Mean barometer, 30.382. The temperature reased from 25°, in the early morning, to 36° at 11 a. m.; was steady at 35° til 4 p. m., and gradually decreased to 30° at last observation. Mean ther- 1°.7. The wind continued from the north with greatly diminished velocity, l calm between 3 and 4 a. m. From 9 a. m. to 4. p. m. there was a gentle breeze from the north, inclining a little to northwest. Calm for an hour and 6 p. m., then brisk wind from the northwest (changing again to north a.) until the close of the day. The ravines and valleys are still filled with e. To-day the sky has been from one to three-fourths covered with a great cirrus cloud, well-defined cirro-stratus predominating. At times immense of pure cirrus were observed, but they were rapidly divided into the various to which this cloud is subject. These clouds stretched across the sky in es, which appeared to converge in the east and west. They moved very n the northwest. A broad halo encircled the moon. The day has been very e snow is certainly going away rapidly. The temperature has been higher) than at any time since the year began. Altogether we begin to feel that really gone, and that summer is approaching.

From 1 a. m. until 2 p. m. the barometer oscillated between 30.24 and 30.28, ropped to 30.18 at last observation. Mean barometer, 30.231. The temper- ually decreased to 24° at 6 a. m., and remained steady for nearly two hours steadily increased to 28° at 11 a. m., and from that hour the mercury between 26° and 29°; mean thermometer, 27°.2. Shortly before 1 a. m. the ged direction (very suddenly) to southeast, where it remained steady until . From that time until 10 p. m. it was unsteady, frequently veering to east

and back to southeast, but settled to southeast late at night. High and g
prevailed. Fair weather prevailed until 3 p. m., when it became cloudy.
p. m. sleet began to fall; stopped at 10.30 p. m.; threatening weather closi
Early in the morning a few stratus clouds appeared at intervals, but the prin
were ill-defined cirro-stratus, moving with the prevailing winds. From
sky was partially covered with a light veil of stratus, apparently of a un
ness, and rising high above the summits. After 4 p. m. the ravines began
dense masses of cloud which were rapidly advanced by the wind from th
until, at 4.30 p. m., the summit was completely shrouded, and remained so
of the day. The sleet fell in minute particles, and was not very heavy.
been driven into the base to-day. This is the first time (this year) that
been able to pass over the last two miles to the mountain. The mill is
ready to work next week. Last year it started on the 5th of May.

May 10.—The barometer fell slightly through the early part of the day
a. m. rose steadily to 30.17 at last observation. Mean barometer, 30.151.
m. the temperature oscillated between 28° and 30°, steadily increased to
early afternoon, and was very unsteady afterward, between 32° and 35°.
mometer, 33°.5. After blowing unsteadily from the south and southwest i
ing the wind settled to the former point at 8 a. m., and remained steady u
when it became very uncertain, coming from all points between southwest
west, and continued to be unsettled during the latter part of the day; ca
night. Heavy gale and storm velocity gradually subsided after 10 a. m. to
last observation. Threatening weather opened the day; heavy rain fell
8.22 a. m., and the summit was shrouded with saturating clouds until 3.30
clearing weather set in, and from sunset until midnight the weather was f
latter part of the day the ravines were filled with an immense quantity of
which formed a level and unbroken sea as far as the eye could reach, giving
peaks that were not covered the appearance of small islands, and utterly
the surrounding country from observation. A few cirrus clouds moved w
vailing wind.

May 11.—The barometer fell throughout the day to 29.88 at last observa
barometer, 29.994. The temperature fluctuated between 32° and 38°, and w
even, sometimes falling or rising 3° in less than thirty minutes. The highest
was observed at 2 p. m. Mean thermometer, 35°. Between 1 and 2 a. m. a
arose from the southwest, which backed to south at 11 a. m., and then rema
for the rest of the day. The velocity oscillated between gentle and high
day opened with very fine weather. This morning the appearance and pos
clouds were much the same as when last observed, but the illusive nature
was much enhanced by the faithfulness with which the clouds simulate
known features of the great watery element. Masses of cloud rushed b
mountain-peaks that arose above them, forming cataracts of great
beauty. Breakers rolled and tossed above the mountains immediately
surface, and pretty bays were created in the irregular shores of the vario
summits. Waves of light and shade of so rare a kind swept over the wh
when the sun rose above the horizon, that words fail to convey the barest
felt by those who witnessed the sublime creation. The illusion was so co
we almost forgot the physical features of the surrounding country in the
tion of the wonderful beauty of the aerial ocean which shut it out from vie
after 7 a. m. the summit was suddenly enveloped in dense clouds, showe
and at 2.47 p. m. heavy rain began. This continued up to 11.30 p. m., but
in quantity as the day wore on. Cloudy weather at last observation.

May 12.—The barometer fell steadily in the early morning, and then rem
paratively steady for the rest of the day. Mean barometer, 29.756. The
decreased to 32° at 3 a. m.; was very steady at that point until 8 p. m., whe
ally decreased and the mercury settled to 29° for the last three observati
thermometer, 31°.5. At a few minutes past 5 a. m., the wind abruptly
north, backed to west between 2 and 3 p. m., and to northwest shortly after
velocity gradually increased from gentle to high wind, and to a heavy gal
set. Dense clouds covered the summit in the beginning of the day. Light
falling at 2.40 a. m.; turned to sleet at 5.30 a. m., and ceased at 8.12 a. m
3 p. m. and sunset an interval of fair weather took place. After sunset th
surrounded and covered the summit, no change for the better being observed
rest of the day. We are now very busy cutting through the large snow
have formed within and without the depot.

May 13.—The barometer fell steadily to 29.46 at 6 p. m., and then gradu
29.58 at midnight. Mean barometer, 29.587. The temperature was unste
morning, fluctuating between 27° and 30°; rose to 34° at 1 p. m., and from
decreased to 26° at last observation. Mean thermometer, 29°.5. The wind
the west between 1 and 2 a. m., and to northwest shortly before 2 p. m.,

Digitized by Google

steady for the rest of the day. High and gale velocity all day. The morning opened with fair weather; a few cirro-cumulus clouds moved with the prevailing wind, and from one to two-fourths stratus hovered over and hung about the neighboring mountains. Early in the forenoon the summit became covered with dense clouds, heavily charged with moisture, and the weather for the rest of the day was very cloudy and threatening. From midday until midnight we were favored with frequent showers of light rain and sleet. These attempts were very insignificant, and the amount collected barely enough to allow of a measurement being made.

May 14.—The barometer oscillated considerably through the day, and gradually fell to 29.42 at last observation; mean barometer, 29.523. The temperature gradually decreased to 19° at night. From midday until 10 p. m., the mercury was steady at 22° and 23°; mean thermometer, 23°. The wind changed to west shortly after 1 a. m., and remained steady from that point until 10.30 p. m., when it returned to northwest. The velocity fluctuated between high wind and storm, reaching a maximum of sixty miles per hour. Through the daylight hours there were frequent lulls, the velocity diminishing to thirty miles per hour. The weather continued to be very cloudy and disagreeable; light snow began falling at 4.15 p. m., and continued for the rest of the day, coming down very heavily after 7.30 p. m. At midnight I estimated that six inches had fallen on a level, but it was difficult to make an accurate calculation. The engineers have arrived at the base, and intimate that they expect to run a freight-train to the summit early in the coming week. The snow is at a standstill, and frozen into solid masses of ice.

May 15.—The barometer rose steadily all day to 29.87 at last observation; mean barometer, 29.734. A rise of 0.16 between 8 a. m. and midday was forwarded at 5 p. m. I was unable to raise Littleton at the proper hour for telegraphing the report. The temperature increased from 19° at 2 a. m. to 24° at 11 a. m., remained very steady at 24° and 25°, sinking to 23° at midnight; mean thermometer, 23°.2. A northwest wind changed to west early in the afternoon, and remained steady for the rest of the day. Storm velocity in the morning, fluctuating between fifty and seventy-two miles per hour. It gradually decreased to a steady, brisk wind, and from 3 p. m. until midnight it varied very little. Heavy snow continued through the early morning, ceasing at 4.10 a m. As the forenoon advanced there was a material difference in the density of the clouds. They were much more transparent, and at times the sun shone through them very brightly. Toward the close of the afternoon they became almost opaque, and the weather was cloudy until after 10 p. m., when the clouds continued to the south and southeast, covering about one-fourth of the sky. A display of auroral streamers was observed between the points of north and east. This took place between 10.30 p. m. and midnight. I went to the base this evening with mail. Preparations are being made to run a train to the summit at the earliest opportunity.

May 16.—The barometer fell to 29.81 at 6 a. m., rose to 29.88 at 11 a. m., and then remained comparatively steady through the rest of the day. Mean barometer, 29.873. The temperature gradually increased to 29° at 1 a. m., remained steady at 28° and 29° during the afternoon, and gradually decreased to 27° at night. Mean thermometer, 27°.2. The wind oscillated between west and northwest in the forenoon, settled to west at midday, and was very steady afterward. Brisk velocity prevailed. High wind at night. With the exception of an interval of fair weather, between 5 and 8 a. m., the weather was very cloudy. I returned to the summit this morning with a load of mail and other necessaries, accompanied by two carpenters employed by the railroad company.

May 17.—The barometer was comparatively steady all day, showing a slight increase of pressure in the afternoon and at night. Mean barometer, 29.878. The temperature rapidly decreased from 27° in the early morning to 23° from 7 to 8 a. m., rose to 25° at 10 a. m., and fluctuated between 25° and 27° for the rest of the day. Mean thermometer, 25°.2. Between 6 and 7 a. m. the wind changed to northwest, and then held steady. The velocity oscillated between high and fresh winds. The weather was very unsettled; snow fell lightly and spasmodically at all hours. From 6.05 a. m. it fell very steadily, and continued to do so after the last observation was received. It is perhaps worthy of record that, on the 9th day of May, 1872, the temperature rose to 47 degrees, and that the highest observed temperature for the present year only reaches to 38°.

The snow on the summit is becoming deeper every day, and unless a rapid thaw sets in at an early date, this summer season will be one of notable brevity.

May 18.—The barometer showed as light but decided increase of pressure. Mean barometer, 29.933. The temperature fluctuated between 22° and 26°. Mean thermometer, 24°.2. Steady, brisk, and high wind, falling off to "fresh" for an hour or two in the middle of the day. Snow ended at 11.35 a. m. The sun broke through the clouds, now and then, for a few minutes at a time, but cloudy weather prevailed. Fair at night. The weather and general appearance of things outside are too monotonous to afford much matter for record.

May 19.—The barometer fell to 29.87 at 5 a. m., and then rose steadily to 30.14 at last observation. Mean barometer, 30.046. Up to 8 a. m. the temperature was very steady

early part of the day the wind came very steadily from the southwest, bu
frequently afterward, making it very difficult to ascertain the true direct
peared to have a greater tendency from southwest and west than from any o
but frequently swinging to all points of the compass. The velocity fluctuate
"gentle" and "brisk," and did not exceed twenty-five miles per hour at a
the day. Up to 10 a. m. clear weather prevailed; only a small quantity
cloud streaked the eastern sky. The upper clouds varied in quantity and a
changing rapidly from well-defined cirrus and cumulus to all their recogni
cations, and oftentimes stretched across the sky in a semi-transparent
stratus clouds partially covered the sky at a considerable altitude, shortly b
set, and remained nearly stationary until 10 p. m., when they slowly desc
covered the summit, and the weather became decidedly moist. A peculiar
colored halo surrounded the sun late in the forenoon. Although in the early
the prevailing wind came from a southern point, the upper clouds moved from
west. Later in the day they followed the course of the prevailing wind, c
point of observation. Heavy rain began falling at 11.35 p. m., and continu
following morning. The mill at the base of the mountain commenced runn
sixteen days later than it began last spring. The snow is moving off very
May 22.—The barometer fell very irregularly to 30.20 at last observati
barometer, 30.207. The temperature was steady between 30° and 34°, u
night, when it suddenly increased from 32° at 11.22 p. m., to 36° at midnig
thermometer, 33°.2. The wind oscillated between west and southwest, nev
ing steady for five minutes together. High and brisk velocity prevailed.
continued through the early morning; ended at 4.46 a. m. Heavy saturat
covered the summit throughout the twenty-four hours. A vast quantity o
been swept from the mountain during the last two days. Jacob's Ladder
off, and from the Waumback House to the base the ground is bare.

May 23.—The barometer fell steadily all day to 29.97 at last observati
barometer, 30.128. The temperature increased to 43° at 7 p. m., stood steady
p. m., and then decreased to 41° for the last three observations. Mean the
40°.0. Southwest wind in the morning changed to west at 7 a. m., and co
with an occasional puff from the southwest, for the rest of the day. Fre

summits. At 10 p. m., and for about thirty minutes after, we observed frequent flashes of sheet-lightning, which passed a considerable quantity of electricity through our stove pipes. The lightning appeared to emanate from a mass of inky-black clouds situated in the southwest, and in close proximity to Mount LaFayette. Mr. Aiken tried to run a train to the summit to-day, but failed in the attempt through a boiler-pump getting out of order. Men were employed in shoveling snow from the track, in some places to a depth of 5 and 6 feet.

May 24.—The barometer oscillated between 29.97 and 29.73. The maximum pressure occurred at 1 a. m. and the minimum at 5 p. m. Mean barometer, 29.846. The temperature gradually decreased to 35° at 8 a. m., and then steadily increased to 41° in the afternoon. After 5 p. m. the thermometer showed a steady temperature of 37°. Mean thermometer, 37°.7. There was a steady west wind all day. The velocity rose to seventy-two miles per hour in the early morning, high wind through the forenoon, and from 5 p. m. until midnight it stormed at the rate of from sixty to seventy-two miles per hour. Up to 9 a. m. the weather was very cloudy and generally dismal. From that hour until 6 p. m. fair weather prevailed, enlivened by a rain-storm and vivid flashes of lightning from 1.30 to 3.30 p. m. As the day closed heavy saturating clouds covered the summit, and continued so for the balance of the day. The upper clouds changed their formation every minute, and moved in various directions, massing and separating repeatedly. Telegraph communication was considerably disturbed by the atmospheric electricity. Mr. Aiken succeeded to-day in running a train to the summit, and three more carpenters were brought up to assist in completing the new hotel.

May 25.—There was a steady rise in the barometer all day; at midnight the instrument read 30.25. Mean barometer, 30.136. The temperature was comparatively steady from 35° to 37° up to midday; steady through the afternoon at 40° and 41°, and decreased to 37° at last observation. Mean thermometer, 37°.2. The humidity was very uneven; especially so at night. Immediately after the 8 a. m. observation was recorded the wind changed to north, and blew very steadily from that quarter until late in the afternoon, when the direction became uncertain, and gradually backed round by northwest to west. The velocity rapidly subsided to a light and fresh breeze from and after the midday observation. From 8 a. m. the sky cleared rapidly and the clouds covering the summits passed away from sight in a series of wonderful dissolving views. The principal clouds (cumulus) tumbled about the ravines in the early part of the day; toward midday they gradually ascended above the summits, leaving a light haze behind to fill the lower country. Upper clouds moved with the prevailing wind. After sunset the stars came out in great splendor, and clear weather prevailed. A few stratus clouds streaked the horizon at night; hazy below.

May 26.—The barometer rose steadily until nearly mid-day, and then fell to the position it held at the commencement of the day. Mean barometer, 30.290. The temperature increased to 47° in the afternoon, and oscillated a good deal during the day. Mean thermometer, 43°.7. The wind veered to north at 3.30 a. m., and died away to a calm at 6.15 a. m. Shortly before 10 a. m., a baffling light wind sprang up from a southern point, oscillating between south and southwest; a steady breeze from the west after 1 p. m.; gentle and fresh velocity in the morning and afternoon; brisk in the latter part of the day. Very fair weather has prevailed throughout the day. A light haze has covered the country below the summits, and the upper clouds (principally cirro-cumulus and light stratus) have moved with the prevailing wind. As night set in the clouds gradually covered the sky in the form of light stratus, and the rapidly-increasing humidity leads us to expect a change in the weather. Within the last few days the snow has melted with astonishing rapidity. Only a few broad patches of soft snow are to be seen, and miniature torrents are rushing down the mountain-sides. For several days past the Ammonoosuc has been unusually high.

May 27.—The barometer fell slowly all day to 30.08 at last observation. Mean barometer, 30.154. The temperature was very steady at 45° until after 9 a. m., increased to 50° at 1 p. m., and then fluctuated between 47° and 49°. Mean thermometer, 47°.0. Wind from the west, with a slight inclination to southwest, through the afternoon. The velocity varied considerably, oscillating betwen fresh wind and a moderate gale. Warm saturating clouds covered the summit, culminating in light rain at 2.35 a. m.; ended at 4.32 a. m.; clearing weather set in immediately after the rain ceased falling. The weather for the rest of the day was fair. The upper clouds were very commonplace, presenting little variety. They moved with the prevailing wind. At night the sky was about two-fourths covered with light stratus clouds, drifting with the wind quite close to the sun mit. The stars shone clearly through the breaks in the clouds. A train arrived to-day, bringing four more carpenters and a supply of provisions.

May 28.—The barometer showed an increase of pressure during the forenoon, and then steadily sank to 29.95 at last observation. Mean barometer, 29.982. The temperature gradually descended to 41° at midnight. Mean thermometer, 46°.0. There was a steady west wind all day. Storm and heavy gale velocity in the early morning dropped to a high wind through the greater portion of the day, and increased to a

Digitized by Google

stiff gale at midnight. The weather has been very uninteresting. Summit covered with heavy clouds, which broke at times sufficiently to tantalize us with the fine prospect in the distance. Painters are at work in the new hotel. The party sent to fill the new stations here arrived in Littleton this p. m. I telegraphed Private Bowie to bring everything with him, and to make all haste in getting to the base.

May 29.—The barometer steadily rose to 30.15 at 5 p. m., and from that time gradually dropped to 30.03 at last observation. Mean barometer, 30.099. The temperature was comparatively steady between 39° and 42°. Mean thermometer, 41°.2. West wind through the day, northwest after 8:30 p. m. Velocity gradually diminished from gale, in the earliest hours, to tolerably steady brisk and high wind. Light rain set in at 12.22 a. m., and continued until 5.26 a. m. Rain-fall .26 of an inch. Cloudy weather through the forenoon. Turned fair at midday. Upper clouds (½ to ¾ cumulus) moved from the west. Clear below. I met the assistants sent to fill the new stations at the base this evening. Some portion of the baggage will arrive to-morrow. Everything has been done by the railroad officials to expedite the placing of the stations in a habitable condition. All unite in the endeavor to make the new-comers as comfortable as circumstances permit.

May 30.—The barometer fell steadily to 29.92 at 5 a. m., rose to 30.14 at 11.22 p. m. and fell to 30.09 at midnight. Mean barometer, 30.050. After 3 a. m. the temperature rapidly decreased until 8 a. m., and then the mercury was comparatively steady, oscillating between 26° and 28°. From 6 p. m. the thermometer showed a very even temperature of 24°. Mean thermometer, 25°.7. Wind from the west and northwest; steady from the northwest during the daylight hours. The velocity rapidly increased to a storm of sixty-six miles per hour at 6 a. m., fell to brisk and high through the day, and increased to sixty miles per hour at last observation. Threatening weather opened the day. Heavy rain fell from 2.10 a. m. to 5.12 a. m. Cleared rapidly, and fair weather prevailed. Clear at night. The principal clouds were light stratus and well-defined cumulus, alternately rising high above the summits and filling the ravines. When above the summits, the clouds moved from the west and northwest. I filled the day in superintending the fitting up of the new stations, and making the necessary telegraph connections. When the instruments were put in circuit the line worked well at all points. Littleton operator provided extra battery, and everything is going on in a satisfactory manner. The observers and assistants worked with a will to have all prepared for beginning operations on the 1st of June.

May 31.—The barometer was comparatively steady after 2 p. m., from 30.30 to 30.33. Mean barometer, 30.287. The temperature decreased 6° between 1 and 2 a. m. From 6 a. m. the mercury rose rapidly to 33° in the afternoon; nearly steady at 31° after sunset. Mean thermometer, 28°.2. Northwest wind changed to west, and steady between 2 and 3 p. m. Storm velocity gradually diminished to a steady, brisk wind. Clear weather all day; slight haze below. For two or three hours after sunset the lower portion of the mountain was enveloped in a dense smoke, which proceeded from fires accidentally started by wood-cutters. A considerable portion of the day was passed in conveying the new barometers to the base and summit, for comparison with the instruments at those stations. As there was no evidence that the articles purchased at Littleton (for the use of the new stations) had been forwarded from Bethlehem railroad-depot, I procured a team and proceeded to that point for the purpose of transporting them to the base without further loss of time.

INSTRUMENTS, PROPERTY, ETC.

No change in the instruments since last report. The carpet is rapidly wearing out.

ALFRED R. THORNETT,
Observer-Sergeant Signal-Service, United States Army.

F.

Daily journal for the month ending June 30, 1873.

SUMMIT OF MOUNT WASHINGTON, NEW HAMPSHIRE,
July 1, 1873.

June 1, 1873.—The barometer oscillated considerably all day between 30.10 and 30.30. Mean barometer, 30.172. After 4 a. m. the temperature steadily increased to 42° in the afternoon, and from 5 p. m. gradually decreased to 37° at last observation. Mean thermometer, 37°.5. The wind continued to come steadily from the west. By 7 a. m. the velocity increased to a stiff gale, and continued so, without much change, until nearly sunset, when it rapidly diminished to high and brisk winds. Fair weather prevailed.

Digitized by Google

Light rain fell from 8 to 10 p. m. Cloudy weather at midnight. At (and for thirty minutes after) the 2 a. m. observation, a pale yellow auroral arch was observed close to the horizon, stretching between the points of north and east. A small quantity of cirro-stratus clouds moved with the prevailing wind; well-defined cirrus and cumulus in the afternoon. I visited the new stations to-day, and found everything going on well. They were provided with stoves, &c., this morning.

June 2.—The barometer was steady to-day, with an inclination to rise at night. Mean barometer, 30.190. The temperature decreased to 28° in the early morning, increased to 36° in the afternoon, and dropped to 28° at last observation. Mean thermometer, 31°.5. Shortly before 1 a. m. the wind changed to north, and back to northwest at 7 a. m.; then remained steady until between 8 and 9 p. m., when it settled to north. Brisk and high velocity, sometimes rising to a moderate gale. The weather continues to be very fine. Upper clouds, similar to those observed yesterday. Auroral streamers covered the sky between the points of north and east, from 12.30 a. m. until daylight. Fires are still burning in the woods below, and the lower country is filled with smoke.

June 3.—The barometer rose slightly through the day, (up to 5 p. m.,) and then fell to 30.20 at 8 a. m.; steady at night. Mean barometer, 30.237. The temperature gradually increased to 41° at 2 p. m., and from that hour decreased to 37°, at last observation. Mean thermometer, 36°.2. North wind in the morning, with "calm" at intervals. Early in the forenoon the direction changed to nothwest, and after 11 a. m. settled to west. Fresh velocity prevailed. Very frequently the sky was covered with light stratus clouds, stretching in horizontal lines, and connected by a dense haze, which pervaded the surrounding country and summits. Our observations were, to a great extent, limited by the smoke ascending from fires in the valleys. Auroral streamers were observed in the northeast from 12.20 a. m. to 3 a. m., but were very indistinct in consequence of the prevalence of dense haze. A bright halo encircled the sun during the afternoon.

June 4.—There was a decided fall in the barometer throughout the day, especially after the early morning hours. At midnight the instrument read 29.77. Mean barometer, 29.885. After 9 a. m. the temperature sensibly increased until 7 p. m., when the thermometer read 48°, and remained steady there for several hours. After 10 p. m. the mercury slowly fell to 46°. Mean thermometer, 43°.7. The relative humidity ranged between 70 and 100 per cent. The direction of the wind oscillated chiefly between west and northwest, with sometimes an uneven movement to southwest. The velocity steadily increased to high wind and gale, sometimes rising to nearly fifty miles per hour, but brisk and high winds prevailed. From 2.25 a. m. and up to midnight we experienced showery weather, the rain falling, in the early part of the forenoon, quite heavily. The summit was never free from heavy saturating clouds at any time during the day. A good deal of interruption took place in the telegraphing of signals to-day. This was caused by the defective insulation between the base and Littleton, and which occasioned considerable trouble last year. I visited the stations, and found that the duties were being creditably performed, and that there was no fault in the cable. Our battery at the base is in good order, but not strong enough to work the several instruments without the assistance of the Littleton battery.

June 5.—An irregular fall in the barometer continued until it reached a maximum of 29.72 at 5 p. m. After that hour the mercury rose to 29.88 at midnight, but oscillated materially all through the day. Mean barometer, 29,819. The temperature decreased in the early morning to 39°, and then stood steady for two or three hours; gradually increased to 45° at 3 p. m., oscillating very frequently, but only to the extent of 1° or 2°. From 3 p. m. a gradual and even decrease to 37° at the last observation. Mean thermometer 40°.2. The humidity fluctuated between 80 and 100 per cent. Excepting an occasional puff from the west, the direction was steady from the northwest. High and gale velocity in the early part of the day; dropped to fresh wind through the afternoon, and rose at night to "high." Rain ended at 2.35 a. m., but until 7 a. m. the summit was covered with clouds almost fully saturated. A short interval of clearing weather showed the ravines filled with heavy cumulus and stratus clouds, which soon rose and covered this station again. At 3 p. m. rain began falling, and on descending the mountain I met a storm of hail, which extended from a little above "Jacob's Ladder" to about three-fourths of a mile below. The stones averaged a quarter of an inch in diameter. Thunder accompanied the storm, the peals following each other in rapid succession. This lasted about 45 minutes. Fair weather from 7 to 9 p. m.; cloudy at night. I visited stations Nos. 2 and 3 to see that the instruments were cut out during the progress of the storm, as I was fearful that the electricity would cause some trouble.

June 6.—The barometer rose very steadily to 30.00 at last observation. Mean barometer, 29.976. A gradual increase of temperature to 43° at 1 p. m., where it remained very steady until 6 p. m., when the mercury (gradually) began dropping; 38° at midnight. Mean thermometer, 40°.7. Humidity steady between 90 and 100 per cent. Up to midday, the wind continued to blow very steadily from the northwest; after that time, until night set in, the prevalent wind was west, then northwest. Brisk and

Digitized by Google

fresh velocity prevailed, seldom rising much above twenty miles per hour. showers fell in the early morning and early in the afternoon. Altogether, been very cloudy and uninteresting. A very feeble attempt to clear up, place early in the afternoon, failed. Fair at night, with heavy cumulus c and below.

June 7.—The barometer was comparatively steady to-day, with a tend toward night. Mean barometer, 30.057. The temperature has been remark at 35° and 36° all day. Mean thermometer, 35°.7. The relative humidit stationary as on yesterday. Fresh wind from the northwest prevailed nu calm at 8 a. m. After 3 p. m. the direction changed to north, and (gra steady blow from the northeast, the velocity rising to a stiff gale of forty per hour at last observation. Fair weather continued until between 2 a when the summit became enveloped in dense clouds, containing a large pe moisture. Light showers of sleet and rain fell during the forenoon, and steady fall of light rain at midday; ended at 5.45 p. m. Cloudy weather clo

June 8.—A decided and tolerably even rise took place in the barometer instrument reading 30.32 at the last observation. Mean barometer, 30.295 ing temperature in the morning—steady at 33° from 4 to 9 a. m.—increase the afternoon, and from 4 p. m. gradually decreased to 36° at midnight. mometer, 37°.2. Humidity decreased to 72 per cent. during the afternoon, The wind came very steadily from the northeast until 3 p. m., when it vee and did not change until it returned to northeast at 10.15 p. m. Storm ve a maximum of sixty miles per hour, opened the day, fell to light wind af and increased to brisk at night. Heavy stratus clouds rushed over the su early part of the day. At 9 a. m. the surrounding country rapidly cleare short time there was nothing but a slight haze between us and all below clouds, partially covering the sky, gradually diminished in quantity, and f and excepting a few streaks on the horizon, the heavens were entirely free

June 9.—The barometer fell all day to 30.18 at last observation. Mean 30.251. The temperature continued on the decrease to a minimum of 34° i morning, increased after 4 a. m. to 48° at 1 p. m., where the mercury he through the afternoon. From 5 p. m. a steady decrease brought the mercu 40° at midnight. Mean thermometer, 42°.7. After the early part of the da tive humidity decreased considerably, and ranged between 50 and 70 per c wind from the northeast fell off to "gentle," and from midday a calm se was but little disturbed up to 9 p. m., when a fresh breeze sprang up in the ually moving round by northeast to north at midnight. Until after midn was entirely clear, and then a few cumuli appeared, moving with the prev that was just dying out. Cumulus clouds prevailed in the latter part of th when moving at all, appeared to come from the north or northeast. It wa determine exactly which course the clouds did take; the movement was s weather at night. The view of the mountains and departing sun from thi remarkably fine and exceptional.

June 10.—Comparatively steady barometer until early afternoon, after th rapid fall to 30.09 at last observation. Mean barometer, 30.152. The t gradually increased and attained a maximum of 54° at 1 p. m.; steady From 5 p. m. the mercury gradually fell to 46° at midnight. Mean thermon To-day the humidity averaged 57.7 per cent., a minimum of 42 per cent. i noon, and a maximum of 69 at night. The wind has been very changeal never holding long from one particular point. West and northwest wind p the morning and latter part of the day, but swept round to southwest lat Light and fresh velocity, dropping to calm at times, rose to a high wind a When not stationary the upper clouds moved with the prevailing wind, ar unusually well-defined and in great variety. So light and airy they appe that it was a real pleasure to observe them as they mingled and separated to re-form in greater beauty. Smoke in the valleys.

June 11.—The barometer fell slightly early in the day, but after 9 a. m rose to 30.08 at last observation. Mean barometer, 30.040. The temperat increased to 48° at 4 a. m., where it remained stationary until midday, the gradually to 39° at midnight. Mean thermometer, 44°.2. The hygrometer great increase of moisture in the atmosphere. Changeable southwest win m., when it gradually veered round to a steady wind from the northwest. T increased to a heavy gale, (late in the afternoon,) which reached a maxim miles per hour at 5 p. m., and then diminished to a brisk wind at night. a. m. rain fell without interruption, and sometimes very heavily. Dense ered the summit for the rest of the day.

June 12.—Steady barometer in the morning. After 6 a. m. the mercury and uninterruptedly to 30.31 at midnight. Mean barometer, 30.199. The t decreased to 33° at 4 a. m., and then oscillated between 32° and 36°. Mea eter, 33°.5. Humidity averaged 80 per cent. Steady northwest wind

Digitized by Google

north between 7 and 8 p. m. Fresh and brisk velocity prevailed. It fell to a gentle wind for an hour or two in the morning, and rose to a moderate gale at night. Light rain for half an hour about 2 a. m. From 6 a. m., and up to midday, the ravines were partially filled with heavy cumulus clouds, which moved in winding masses as the formation of the mountain-sides dictated. From midday, and up to 6 p. m., the summit was capped, giving no opportunity for extensive observation. From 9 p. m. no clouds were to be seen; the rapidity with which they disappeared was truly astonishing.

June 13.—The barometer rose very rapidly, and reached a maximum of 30.35 at 11 a. m. After that hour the mercury fell steadily to 30.26 at midnight. Mean barometer, 30.300. The temperature steadily increased to 45° at 2 p. m. Steady at 44° for three hours after, and then decreased to 38° at night. Mean thermometer, 40°.0. Great decrease in the humidity to-day; minimum during the afternoon of 60 per cent. Variable northeast light wind, with numerous calms, until it settled to a fresh wind from the west and northwest at night. The morning opened with a clear sky. Light stratus and cirrus passed over between 4 and 9 a. m., followed by about two-fourths cumulus. After 5.30 p. m. the sky was free from cloud, with the exception of a very slight fringe of stratus on the southeastern horizon. Fine, star-light night. From 9 to 10 p. m. an auroral arch appeared in the north; faint yellow color.

June 14.—After 7 a. m. the barometer gradually fell to 30.13 at last report. Mean barometer, 30.212. Temperature very steady at 36° until 7 a. m., when it gradually increased and fluctuated for the greater part of the day between 43° and 44°; decreased to 38° at 9 p. m., and then the mercury rose to 41° at last observation. Mean thermometer, 39°.0. The humidity decreased very rapidly as the day wore on, and at 10 p. m. reached a minimum of 17 per cent.; the smallest percentage that I have ever observed on this station. Light wind from the west and northwest, but calms prevailed through the daylight hours. After sunset there was a light and fresh wind from due southeast. The day has been uniformly fair, and cumulus clouds formed in great variety. In the latter part of the evening the upper clouds moved steadily from the west.

June 15.—The barometer fell steadily to 30.04 at midnight. Mean barometer, 30.083. After 6 a. m. the temperature steadily increased to 52° at midday, and remained steady until 2.30 p. m., then decreased to 46° at 7 p. m., and did not change through the rest of the day. Mean thermometer, 46°.0. The humidity increased toward the close of the day from 90 to 100 per cent. Light southerly wind fell to a calm between 1 and 2 a. m., which latter continued for several hours. Uncertain, gentle wind from the northwest through the forenoon, became steady after midday, and freshened to high and moderate gale velocity at night. Fair weather prevailed during the daylight hours, but as evening set in large masses of dense stratus covered and drifted over the summit. The weather at night was very cloudy and threatening.

June 16.—The barometer rose after early morning to a maximum of 30.13 at 11 a. m. and then steadily fell to 29.91 at the last observation. Mean barometer, 30.041. There was a steady increase of temperature up to 1 p. m., when the mercury stood at 56°, and decreased through the rest of the day to 40° at midnight. Mean thermometer, 48°.7. Steady northwest wind all day. The velocity gradually diminished from a brisk wind to a calm at noon. After 1 p. m. there sprang up a brisk wind, which increased to high and gale as night approached. Clearing weather set in shortly after 7 a. m., and very fair weather prevailed until 6 p. m., when heavy clouds came down from the northwest and soon enveloped the mountain. At the same time the humidity sensibly increased, and there was every indication of an approaching storm. The wind was very warm, and had settled to a steady blow averaging thirty-two miles an hour. Sheet and forked lightning flashed over and below the summit from 10.11 p. m. until after midnight, with the usual accompaniment of heavy thunder, which continued rolling, almost without intermission, during the progress of the storm. At 10.30 p. m. heavy rain set in, and did not cease until long after midnight. The upper clouds were nearly all large cumuli moving from the northwest. I visited stations Nos. 2 and 3 this a. m.; found all well and the work progressing favorably. Mr. Gates (district superintendent to the Western Union Telegraph Company) arrived at the base to-night with a party of men to put up the mountain wire.

June 17.—Steady barometer in the morning. After 5 a. m. the mercury gradually rose to a maximum of 29.97 at 4 p. m. and fell slightly and unevenly after that hour. Mean barometer, 29.909. There was a decrease in the temperature of 10° from 1 a. m. to midnight. Mean thermometer, 36°. The wind continues to come very steadily from the northwest, and with heavy gale velocity, which now and then drops to high wind. Rain ended at 12.45 a. m. The weather was cloudy until after 7 a. m., when the clouds broke and fair weather set in for the rest of the day. During the forenoon large quantities of cumulus cloud filled the ravines to the west of the mountain, sometimes entirely covering the summits in that direction, excepting that of La Fayette. These clouds passed away as the day wore on, leaving the upper sky perfectly clear. Between 6 and 7 p. m. we gradually became enveloped in dense stratus clouds, which hung over us for two or three hours, and then gradually dwindled to a few faint

Digitized by Google

streaks at midnight. From 10 p. m. until midnight a diffused light app
northern horizon; it was not very distinct in coloring.

June 18.—The barometer rose to a maximum of 30.06 at midday, stood s
hour, and then fell rapidly to 29.91 at midnight. Mean barometer, 29.99
perature decreased rapidly to 26° at 4 a. m., and remained steady at th
two hours. From 6 to 7 a. m. the temperature ran up 6°, (to 32°,) and grad
in the early part of the afternoon, remaining very steady afterward. Mea
eter, 41°.0. There has been no change in the direction of the wind to-da
locity decreased to a fresh wind at 2 p. m., and then steadily increased
fifty miles per hour at midnight. From 5 a. m. the sky was partially co
haze of well-defined cirrus clouds, which at 4.50 p. m. gave place to a
stratus clouds. These last gradually descended and covered the summit. A
m. the stars were visible through a few breaks in the clouds, and fair weath
day. During the latter part of the afternoon a very peculiar cloud was
the southeast of and a little above the mountain. It was of a light-brown
deeper than any other in sight at the time,) and in the shape of a depressed
or rather fruit-dish, the formation being very accurate. This cloud appeared
stationary, while the others (cirrus) were moving rapidly before the north

June 19.—The barometer fell to a minimum of 29 87 at 6 a. m., then ros
30 03 at 2 p. m., and fell to 29.88 at last observation. Mean barometer,
temperature increased from 42° in the early morning to 53° and 54° at n
thermometer, 50°.2. After midday the mercury was pretty steady from
Steady northwest wind continued until between 6 and 7 p. m., when it bac
and remained so for the rest of the day. Gale velocity gradually fell off
fresh wind through the middle of the day, and from 3 p. m. increased to
miles per hour at midnight. The day opened with rain, which began at 12.
continued until 4.15 a. m., coming down very heavily at times. Cloudy
vailed until it ended in a shower of light rain, which took place between
2 and 3 p. m. After the shower the clouds rapidly passed away from
showing cumulus clouds below, and about one-fourth cirrus above it. In
hours these cirri gave place to cumuli. Haze below; and as night wore
peared to be a blending of light stratus with the other clouds, and the
quently veiled by them. Cloudy weather at midnight.

June 20.—The barometer low, and comparatively steady all day. Mean
29.827. The temperature decreased to 45°, where it remained steady from
1 p. m., and then rapidly increased to 49° at 4 p. m. After 5 p. m. the m
down very rapidly to 34° at last observation. Mean thermometer, 43°.
7 a. m. the temperature fell 5°; the same rapid decrease took place betw
p. m. The wind changed to northwest at 1.30 a. m., and remained steady
rest of the day. The wind rose to a storm of sixty miles per hour at 2 a. m
between "gale" and "brisk" through the day, and rose to a storm at nig
rain from 3.15 to 3.45 a. m. Cleared rapidly and fair weather prevailed
when the summit was again covered with dense clouds. Two-fourths to th
cumulus cloud moved with the prevailing wind, frequently capping the su
flight. I visited all stations to-day and found everything correct.

June 21.—The barometer oscillated considerably through the day, and
at last observation. Mean barometer, 29.938. Temperature steady at 30
the morning, rose to 36° in the middle of the day, and decreased to very
mometer of 32° at night. Mean thermometer, 32°.5. Steady northwest
3.20 p. m., when it changed to north and blew steadily from that point fo
the day. The wind increased in force to sixty-eight miles per hour at
then rapidly diminished to fresh and brisk. About one-fourth stratus clo
above the summit in the beginning of the day, which rapidly increased in
capped the mountain. Between 3 and 4 a. m. the clouds massed in the sout
ing a clear starlit sky and brilliant moon. This lasted but a few minutes,
mit was again covered with dense clouds. From 12.30 to 3.25 p. m. we
light showers of rain, snow, and heavy sleet. Cloudy weather continued
of the day. The wire has been working very hard for the past two day
out entirely this afternoon.

June 22.—The barometer rose steadily all day to 30.27 at last observa
barometer, 30.184. The temperature was very steady in the early morning
from 4 a. m. fluctuated between 34° and 36°. Mean thermometer, 3
changed to northwest late last night, and back to north at 3.30 a. m. Ve
direction through the day, west and nothwest being the prevalent winds
m., when it died away to calm. Fresh wind from the northeast at nigh
midnight. Fresh and gentle velocity prevailed. The clouds lifted for a
in the early morning, but up to 7.30 p. m. cloudy weather prevailed. Af
sky cleared rapidly, and Portland, Me., could be easily seen with the nak
the telescope brought the houses out very distinctly.

I made a visit to stations Nos. 2 and 3 to-day, and found the observers at
and the business going on steadily.

Digitized by Google

An auroral arch appeared in the north from 10 p. m. until midnight, which extended from northeast to north, and rested upon a dark segment. I found a break in the "ground" and cable; made the necessary repairs.

June 23.—The barometer rose to 30.38 at 11 a. m., and then gradually fell to 30.36 at last observation. Mean barometer, 30.347. The temperature steadily increased to 47° at midday, fluctuated two or three degrees below that point during the afternoon, and settled to 44° at night. Mean thermometer, 43°.5. This has been a very calm day, only a few uncertain puffs from the east and southwest occurring to break the monotony of a dead calm. Fair weather all day. Upper clouds (cumuli) moved from the southwest in the latter part of the afternoon. A very small quantity of stratus appeared at irregular intervals through the day and night. Auroral streamers covered the sky to the north and east from 9.30 p. m. until 2.15 a. m. next morning, gradually diminishing in intensity as they passed from view.

June 24.—The barometer fell slightly in the early morning, and then steadily rose to 30.47 at night. Mean barometer, 30.409. The temperature decreased to 41° at 4 a. m., increased to 51° in the early afternoon, and decreased to 45° at night. Mean thermometer, 46°.7. Prevailing wind from points either side of east, and very frequent calms of long duration. The velocity through the day was gentle; fresh at night. Fair weather all day. The upper clouds moved from the west and northwest nearly all day. After 7 p. m. the night was clear, and between 9 and 10 p. m. a beautiful aurora appeared in the north and extended a considerable distance along the horizon. It was in the form of a lambent flame, which incessantly shot up streamers reaching to the zenith, instantly returning to the main aurora. This continued until after 3 a. m. next morning. I visited the stations to-day, from base to summit.

June 25.—The barometer continued rising to 30.58 at midday, and then gradually fell to 30.54 at last observation. Mean barometer, 30.554. The temperature increased rapidly through the forenoon. The thermometer was steady at 55° and 56° during the afternoon, and dropped to 48° at night. Mean thermometer, 51°.2. Steady northeast wind through the early part of the day; turned to southwest at 3.50 p. m., and immediately after to dead calm. Steady northwester at night. Gentle velocity prevailed nearly all day; brisk at night. Clear and fair weather prevailed all day. Principal upper clouds for the past two days, cumuli. Only a few stratus clouds appeared at long intervals. A bright lambent flame, smaller, but similar to that of last night, appeared in the north from 9.10 p. m. to 3.15 a. m.

June 26.—Up to midday the barometer was steady, and then fell rapidly to 30.36 at last observation. Mean barometer, 30.456. The temperature increased to 59° in the afternoon, and decreased to 49° at midnight. Mean thermometer, 53°.0. Wind steady from the northwest—due west for an hour or two before sundown. Fresh and gentle velocity increased to a high wind at night. Fair weather prevailed all day; clear at night. Principal clouds, cirrus, moving from the west and northwest. Well-defined cirro-stratus (about one-sixteenth) were observed in the morning, and did not altogether lose that character throughout the day. A great quantity of pure and almost transparent cirrus covered the sky. A soft haze covered the mountains and lower country. After 9 p. m., spasmodic auroral displays ("merry dancers") took place near the northern horizon, and appeared at irregular intervals into the early part of the next morning. Visitors remark upon the scarcity of water in this section of the country. Trains cannot run from the summit, as the springs fail to afford sufficient water to supply the engines.

June 27.—The barometer fell rapidly all day to 30.08 at midnight. Mean barometer, 30.197. The temperature rapidly increased to 59° in the middle of the day, and gradually decreased to 51° at last observation. Mean thermometer, 53°.2. The relative humidity fell to 16 per cent. from 9 to 10 a. m., and increased to 86 at night. Northwest wind changed to west at 5.30 p. m., and continued so for the rest of the day. Calm from 9 to 10 a. m. High wind fell off to fresh and gentle, and increased at night to a moderate gale. Clear and fair weather prevailed. Cirro-stratus clouds predominated and remained stationary through the greater part of the day. As the wind from the west increased in force, the clouds were driven rapidly before it. Toward sundown only a few cumuli dotted the sky. Slight streaks of stratus (well defined) appeared late at night and gradually increased in volume. Haze and smoke covered the lower country.

June 28.—The barometer fell to 30.02 at 10 a. m., and then rose to 30.10 at last observation. The mercury rose and fell very unevenly. Mean barometer, 30.073. The temperature fluctuated between 51° and 53° until late in the afternoon, and, from 4 p. m., gradually decreased to 47° at night. Mean thermometer, 50°.7. The wind veered to northwest between 1 and 2 a. m., and prevailed from that point nearly all day. It moved around to west for an hour or two in the late forenoon, and to north at sundown. After 8.15 p. m. the wind suddenly died away and a calm ensued. High and brisk velocity prevailed; fresh in the forenoon. The day opened with cloudy weather; the summit covered with dense saturating clouds. The humidity rapidly increased to 100 per cent., and light rain fell from 5.30 to 11.45 a. m. Cloudy weather prevailed

(with intervals of clearing) until after 9 p. m., when the sky rapidly cleared, a slight streaks of stratus cloud remained near the southeastern horizon. of heat lightning were observed in the south a little before midnight, an rora appeared in the northeast from midnight until 2.20 a. m. The tel structors are making extensive alterations in the wires, and interrupt op siderably.

June 29.—After 1 a. m. the barometer fell to 30.06 at 4 a. m., then steadily at 11 a. m., and remained steady until 8 p. m. From that hour there w rise to 30.18 at last observation. Mean barometer, 30.153. The temperatu to 58° at midday, and remained very steady until late in the afternoon, a to 54° at 8 p. m. From that time the mercury was very steady; mean t 54°.2; calm until 5.10 a. m., when a variable light wind arose in the west. at 8.20 a. m. Very light puffs from the west and northwest until late in th when the velocity increased to "brisk," and changed direction to the so to southwest after 9 p. m. Fair weather prevailed. Shortly before sun clouds massed on the summit, and for a couple of hours there was every approaching rain. This passed off, and the night set in fair. Heavy cu covered the greater portion of the sky after the early part of the forenoon smoke prevailed below. Telegraphic communication is very uncertain.

June 30.—The barometer fluctuated between 30.15 and 30.19; mean 30.183. The temperature was comparatively steady; from 51° to 55°; me eter, 53°.2. Wind oscillated between west and southwest through the e the day, and settled at the latter point after 10 a. m. The velocity stead to a heavy gale of fifty miles per hour at midnight. The day opened wi mosphere above the summit, and with the ravines filled with a large qua ulus cloud. After 6 a. m. heavy saturating clouds covered the summit, cu light rain at 1 p. m. It held up between 5.30 and 9.20 p. m., then recom continued after the last observation was recorded, coming down very hea

BASE OF MOUNT WASHINGTON, NEW HAMPSHIRE.

May 1, 1873.—This station bears due west of the summit. Regular commenced at 1 a. m. A few "stratus" clouds were observed at 1 a. m disappeared, leaving a perfectly clear sky. A light easterly wind preva out the night, the barometer remaining stationary until about 6 a. m., w to rise slowly. The temperature declined six degrees between 1 and 5 a. m a minimum of 30° at 5 a. m., and remaining at th t! ight until 6 a. m., w to ascend. Wind veered to southwest at about 6.30 a. m. Fresh to br winds during the day, with partly fair and cloudy weather. Maximum 53°. At 7 p. m. the wind changed to the south, and at 8 p. m. to the so continued "light" from that quarter during the night. The 10 a. m. sig vations was not acknowledged by observer on summit.

May 2.—A gentle southeast wind prevailed at 1 a. m., chang shortly after, and remaining in that direction until 7 a. m., w ensued. Barometer steady during the night. The temperature remain tween 1 a. m. and 5.30 a. m., reading 37° at 6 a. m. and 44° at 8 a. m. A clouds were observed in the southwestern horizon between 1 and 2 a. m., to "cirri" moving slowly from west. No signals could be heard from sun 1 and 4 a. m. A light westerly wind set in at 8 a. m., occasionally shifting and eastward during the day. The sky clouded over with cirro-stratus, s stratus during the forenoon, and light snow commenced at 2.45 p. m., t falling steadily but slowly. The thermometer reached its maximum heig when it read 30° and fell steadily thereafter. Snow turned to rain at 7 p latter to sleet at 9.50 p. m., ending at 11 p. m. Total amount of melted sn

Digitized by Google

rain, 0.49 inch. A very light wind prevailed during the night, shifting between southeast and southwest. No signals heard from summit at 8 p. m.

May 3.—Barometer continues to fall slowly and steadily. The thermometer reached its minimum at 6 a. m., reading 31°.5. Light southeast and southwest winds, with occasional calms, until morning. Dark, threatening stratus clouds were observed in the early morning, and light snow fell between 3.45 a. m. and 4.30 a. m.; the clouds still appearing very heavy and sinking lower down the mountains. Light snow recommenced at 7.40 a. m., a steady but very light westerly wind prevailing. The barometer continues to fall until noon, and rises steadily thereafter. Snow ended at 5.40 p. m., the weather soon after giving signs of clearing up. Light westerly winds prevailed until 7 p. m., when a fresh southeast wind set in which had backed to northeast by 9 p. m., but changed to the west again toward midnight, the weather clearing up finely with change of wind. No signals could be heard from the summit after 8 p m.

May 4.—Barometer continued to rise after midnight. The thermometer reached its minimum at 5 a. m , when it read 23°. A gentle westerly wind prevailed until 3.45 a. m., when the vane swung to the southeast, and to the north at 8 a. m. A few cirri were observed at 1 a. m., which soon disappeared to the southeast, leaving a clear sky. Clear weather continued until 2 p. m., when the sky became partly overcast with cumulus clouds moving from the northwest. A fresh northwest wind prevailed throughout the afternoon, which apparently blew with great force on the summit, as dense clouds of snow were at times observed. Maximum temperature, 48° at 3 p. m. Signals acknowledged regularly after 3 p. m. Barometer continued rising until 7 p. m., when it began to fall slowly; the thermometer rising 2° between 9 p. m. and midnight. A gentle north wind prevailed throughout the night, with fair weather until midnight, when the sky became entirely covered with stratus clouds.

May 5.—The barometer continued to fall slowly until 3 a. m., and remained stationary until 6 a. m., when it began to rise slowly. The fluctuation of the thermometer from 1 to 6 a. m. was very small, not exceeding 2°. At the last-named hour the mercury began to fall, reading 33°.5 at 8 a. m., which is the lowest observed during the morning. Light to fresh northwesterly winds prevailed during the night, followed by a dead calm at 7 a. m., which continued until 9 a. m., when a gentle northwest wind set in. Stratus clouds completely covered the sky during the night, which were observed to move from the northwest at 4 a. m., and at 5 a. m. were moving rapidly from the west, assuming a threatening appearance. Light snow commenced at 6.15 a. m., soon increasing to "heavy snow," and ending at 8.45 a. m., at which time a dense fog set in. Weather remained foggy and misting until 10.45 a. m., when snow began to fall again; the latter at times becoming rain or sleet. At 12 m. the weather showed signs of clearing up, which were verified during the afternoon, the stratus clouds breaking up and assuming the shape of cumuli, moving rapidly from the northwest. A fresh northwest wind prevailed throughout the afternoon, and the barometer continued to rise steadily. All signals were promptly acknowledged by the summit, the line working very well to-day. Clear weather, rising barometer, and light northerly wind at night. Signals not acknowledged by summit at 11.22 p. m.

May 6.—Clear weather and steadily rising barometer between midnight and 9 a. m. The thermometer fell at the rate of 1° per hour until 5 a. m., when it reached a minimum of 23°. Gentle northerly winds prevailed, veering more easterly at 8 a. m. Continued clear weather and fresh west to northwest wind during the afternoon. At 8 p. m. the wind changed to southeast, and remained in that direction up to 12 m. Maximum temperature of day, 45°. Clear weather and rising barometer throughout.

May 7.—Barometer still rising. Clear sky until 5 a. m., when a few cirri were observed on the western horizon. A gentle southeast wind prevailed until 4 a. m., when it changed to the east and to the northwest at 7.30 a. m. Minimum temperature 28° at 4 a. m. Very pleasant weather during the afternoon, with light and variable wind. A few cirri observed on western horizon, moving from the northwest; elsewhere the sky was clear. Maximum temperature 54° at 3 p. m. Barometer remained nearly stationary throughout the night. A gentle north wind prevailing, with generally clear sky.

May 8.—The barometer rose slowly and evenly during the night. The temperature advanced 2° between midnight and 3 a. m., and fell off until 6 a. m., reaching a minimum of 32°.5. A gentle north wind prevailed during the night, with clear sky, until 3 a. m., when the lower atmosphere grew hazy and cirrus clouds began to appear, moving rapidly from the west.

4 *p. m.*—The barometer continued rising until 9 a. m., and has been falling slowly since that hour. The thermometer exhibited a maximum of 58° at 3 p. m. Sky three-fourths covered with cirrus and cirro-stratus clouds moving from the northwest. A gentle westerly wind prevailed until 2 p. m., when a fresh and steady southeast wind set in. Lower atmosphere "hazy."

12 *p. m.*—Wind continued gentle from the southeast, with partly fair and clear weather during the past eight hours. The barometer was nearly stationary until 11.22 p. m., when it began to fall steadily. All signals promptly acknowledged from summit.

May 9, 8 *a. m.*—The thermometer reached its minimum of 33° as early as began to rise shortly thereafter, going up to 41° by 5 a. m. The barometer and regularly. A gentle southeast wind prevailed until 4.30 a. m., when the northeast, veering back to southeast at 7 a. m. A few "cirri" could until after 3 a. m., when the sky clouded over with stratus, which soon en entire heavens.

4 *p. m.*—Cloudy weather and fresh southeast wind; the latter shifting at 11 a. m., but backing to southeast by 1 p. m. Maximum temperature 5 Barometer falling slowly.

12 *p. m.*—Light rain commenced at 6.10 p. m., the wind at the same time i brisk, blowing in gusts of considerable force, and varying between southe The barometer fell .068 inch between 4.57 p. m. and midnight. Rain ce p. m.; amount, 0.11 inch. Weather threatening, and wind blowing strong

May 10, 8 a. *m.*—The barometer has continued to fall during the past with continued strong gusts of wind from the east and southeast. Rain r at 1.30 a. m., and continued throughout, perfect sheets of it coming dow tains. Rain-fall, .29 inch.

4 *p. m.*—The minute observations taken between 8 and 9 a. m. disclo dinary fluctuations of the barometer, the mercury alternately rising and .010 to .018 inch in the space of one minute. These fluctuations appe direct proportion to the force of the strong gusts of wind which followed e rapid succession. Rain ceased at 10.05 a. m., and the wind moderated soo but the weather continued cloudy and threatening until 4 p. m., whe clouds began to break up, giving view to cirri and cirro-cumuli moving the southwest. The wind veered to the south at 2 p. m., and to the west hours of 3 and 4 p. m. Maximum thermometer, 58° at 1 p. m. The record was lost between 2.30 and 6 p. m., the insulating attachment order.

12 *p. m.*—Partly clear and cloudy weather during the past eight hours, barometer. Wind shifted to the southeast at 6.30 p. m., blowing gently from that point throughout.

May 11, 8 *a. m.*—The barometer has been falling slowly since midnigh little change of temperature until after 3 a. m., when the thermometer b Minimum temperature, 37°. A gentle southeast wind prevailed until when it shifted to the west, and died off soon after. A few "cirri" were the southern horizon between 1 and 4 a. m., which were followed by s over the mountains on the southeast, and covering the entire sky by 7 a.

4 *p. m.*—Variable light airs and calms until 10 a. m., when a fresh sou set in, which shifted to the northwest at 3.30 p. m. Weather became toward noon, and rain began to fall at 2.20 p. m. The barometer fell slo out, and the minute observations made between 2 and 3 p. m. showed fluctuations of the mercury, especially during the ten minutes precedin ning of rain. Maximum temperature 59° at 2 p. m.

12 *p. m.*—Rain continued throughout the night. Total rain-fall during hours 0.97 inch. The barometer fell .100 between 4.57 p. m. and midnig temperature has changed but little in the past eight hours. A light sou prevailed until about 8 p. m., when a calm ensued. Between 9 and 10 northerly wind sprang up, which continued up to midnight.

May 12, 8 *a. m.*—The barometer fell slowly until 6 a. m., when the press slightly. The thermometer fell 1° from midnight to 2 a. m., reading 39° hour, which is the minimum during the morning. Continuous rain thr gentle north wind prevailed until 6.15 a. m., at which time the wind d pletely.

4 *p. m.*—Rain ceased at 10.45 a. m., and the clouds began to break up Partly fair and cloudy weather during the afternoon. The barometer has with a slight tendency to rise. Maximum temperature 50° at 3 p. m fresh variable northerly winds have prevailed during the past eight ho clouds moved steadily from the northwest.

12 *p. m.*—Barometer has risen very slowly and the weather cleared Gentle northerly to westerly winds continued until 11 p. m., veering t that hour. Barometer falling at midnight.

May 13, 8 *a. m.*—Barometer has fallen steadily since midnight. Minimum 34° at 2 a. m. No clouds were visible until 6 a. m., when a dense bank of observed rising in the southern horizon, which increased rapidly and soon entire sky. Variable easterly winds throughout, veering more southerly to

4 *p. m.*—The barometer fell quite rapidly until 3.25 p. m., when simulta a change of wind from southeast to northwest, it began to rise. Light r 10.25 a. m., and continued at intervals. The wind, until 3.25 p. m., was fr east, but the lower clouds moved steadily from the southwest, and later fr Maximum temperature 52° at 1 p. m.

12 *p. m.*—Partly fair and cloudy weather, with fresh northwest wind. Barometer rising slowly.

May 14, 8 *a. m.*—The barometer has risen slowly during the past eight hours, with cold and cloudy weather. Light snow between 4.50 and 7.15 a. m. Minimum temperature 30° between 3 and 6 a. m. A fresh northwest to southwest wind prevailed throughout.

4 *p. m.*—The barometer has been falling very slightly since 8 a. m. and the thermometer has changed but little. Maximum temperature, 34° at 12 m. The weather has continued cloudy, with light snow at short intervals. Sleet fell between 11.25 and 11.50 a. m. Fresh westerly wind prevails.

12 *p. m.*—Snow fell until 8.40 p. m. Cold and cloudy weather continued. Barometer still falling slowly. Fresh westerly winds throughout. Amount of melted snow .04 inch.

May 15, 8 *a. m.*—The barometer changed but little until after 4 a. m., when it began to rise slowly and more rapidly after 6 a. m. The thermometer fell from 28° at 1 a. m. to a minimum of 26° at 2 a. m., keeping at that height until after 6 a. m. when it began to rise slowly. Fresh and brisk northwest to north winds throughout with cloudy weather. A light mist commenced at 6.45 a. m., turning into light snow.

4 *p. m.*—Snow ended at 11.30 a. m., but the weather continued cloudy and threatening, with "gentle to fresh" northwest wind. Maximum temperature, 41° at 2 p. m. Barometer rising.

12 *p. m.*—The weather gave signs of clearing up after 9 p. m., and all clouds but a few cirri had disappeared at 11 p. m. Light westerly winds veered to the north at 9. p. m. The barometer continued to rise until 8 p. m., and remained nearly stationary after that hour.

May 16, 8 *a. m.*—The sky became overcast soon after midnight, and remained so throughout. The thermometer reached a minimum of 32° at midnight, and rose 2° by 2 a. m., remaining at 34° until 6 a. m. Light northerly winds throughout. The barometer has been very steady during the past eight hours.

4 *p. m.*—The barometer has continued very steady. Light rain commenced at 11.10 a. m., and continued until 12.40 p. m., the weather remaining cloudy. Gentle northwest to westerly winds throughout. Maximum temperature, 48° at 2 p. m.

12 *p. m.*—Continued cloudy weather and light north and northwest wind. The barometer has risen slightly.

May 17, 8 *a. m.*—Light rain between 2.50 and 4.10 a. m. Weather still cloudy, barometer steady. A light north wind prevailed until 2.15 a. m., followed by a calm which lasted until 4.10 a. m., when a gentle westerly wind sprung up. Maximum temperature 35°.5 at 6 a. m.

4 *p. m.*—The barometer has risen slowly during the past eight hours. Cloudy weather continues, with light squalls of rain and sleet. The wind veered to the northeast at 3 p. m. The maximum temperature, 45° at 1 p. m.

12 *p. m.*—Sleet and rain until 9.40 p. m., with light winds, the latter backing to northerly at 9 p. m., and to northeast at 11 p. m. Barometer rising until 9 p. m., when it fell slowly until 10 p. m. and remained stationary up to midnight. Total amount of melted snow and rain, 0.13 inch.

May 18, 8 *a. m.*—The barometer fell steadily until 4 a. m., and began to rise slowly after 5 a. m. The thermometer stood at 35° until after 4 a. m., when it fell slightly up to 7 a. m., reaching a minimum of 33°.5. Light rain commenced at 1.45 a. m., turning into heavy snow at 4.40 a. m., which ceased at 5.30 a. m., but recommenced at 6.15 a. m. Variable light winds and calms throughout.

4 *p. m.*—Frequent short squalls of sleet between 11 a. m. and 2 p. m., with light to fresh northwesterly winds throughout. Barometer rising slowly. Weather gives promise of clearing up. Maximum temperature, 45° at 3 p. m.

12 *p. m.*—The barometer has risen steadily during the past eight hours, and the weather cleared up finely. Fresh northwest winds until 8 p. m., when it veered to the north. The thermometer fell to 30° at 11 p. m., which is the minimum of the day; a few clouds appearing at midnight. Amount of melted snow and sleet, .36 inch.

May 19, 8 *a. m.*—The barometer fell uninterruptedly between midnight and 5 a. m., and is now rising slowly. The temperature has been steadily increasing since midnight, reading 31° at that hour, 33° at 3 a. m., 37° at 6 a. m., and 41° at 8 a. m. The sky became overcast soon after midnight with stratus clouds, which now appear to be breaking up. A light northerly wind prevailed, veering to the northwest at 7 a. m.

4 *p. m.*—The barometer has been rising steadily since 8 a. m.; maximum temperature, 49°, at 3 p. m. The weather has partly cleared up, the clouds having a greater elevation and being broken up into large cumulo-stratus and cumulus clouds. A fresh northwest wind prevailed, veering to the north between 3 and 4 p. m.

12 *p. m.*—The weather cleared up entirely by 8 p. m., and remained clear throughout the night. The wind veered to the northeast soon after 4 p. m., blowing gently and steadily from that quarter during the past eight hours. The barometer has risen

Digitized by Google

steadily. The temperature declined until 10 p. m., and remained station
that hour and midnight.

May 20, 8 *a. m.*—The barometer remained nearly stationary until after
which time it has been rising steadily. The thermometer stood at 31° b
night and 3 a. m., fell to a minimum of 30° at 4 a. m., and began to rise be
6 a. m. The weather has continued clear with light winds, the latter hav
the east at 1 a. m., backed to the north at 4 a. m., and to the northwest at

4 *p. m.*—The barometer continued to rise until 10 a. m., remained sta
about 2 p. m., and has since been falling slowly. Maximum temperature, 5
was perfectly clear until after 12 m., when a few cumuli made their appea
southwestern horizon. Variable light airs until noon, when a steady gent
in from the northeast, which continued until after 3 p. m., shifting to a fr
wind at that time.

12 *p. m.*—The barometer rose steadily between 4 and 10 p. m., and rem
stationary during the last two hours. The thermometer fell very regularly
4 p. m. to 36° at midnight. The weather cleared up again completely by
remained so throughout the night. A steady gentle southeast wind preva
6 p. m. and midnight.

May 21, 8 *a. m.*—Clear weather and gentle to fresh easterly winds throu
rometer very steady until after 6 a. m., when it commenced to rise. The
changed but little between midnight and 6 a. m. A minimum of 34° wa
3 a. m.

4 *p. m.*—The barometer has been falling steadily since 8 a. m., and the s
ually clouded over with "cirri" moving from the southwest and spreading
toward evening. The thermometer rose rapidly during the forenoon, rea
imum of 59° at 2 p. m. A faintly colored halo was observed between 11 a.
Fresh but very variable winds throughout.

12 *p. m.*—Sky assumed a threatening appearance after night-fall, and rain
to fall at 11 50 p. m. Barometer falling. Variable westerly winds until 9
a gentle northeast wind set in.

May 22, 8 *a. m.*—Rain ended at 4.30 a. m., but the weather continues
Light northerly winds during the night, backing to westerly at 5 a. m. T
eter stood lowest at 1 a. m., reading 40°; rose to 44° at 5 a. m., and fell off
at 6 a. m. Barometer falling slowly.

4 *p. m.*—Continued cloudy weather, variable light airs and calms. Baro
slowly. Maximum temperature, 53° from 1 to 2 p. m.

12 *p. m.*—A very steady and light southeast wind set in after 4 p. m., whi
throughout the night. Weather cloudy and barometer falling. The ther
to 46° at 6 p. m., and remained near that height throughout the night.

May 23, 8 *a. m.*—Continued cloudy weather, falling barometer, and gen
wind. Temperature fluctuating between 45° and 46° until after 6 a. m., w
to rise steadily.

4 *p. m.*—Weather still cloudy and barometer falling. The thermometer
reaching a maximum of 64° at 2 p. m. Wind very variable, but chiefly sou
a "light to fresh" velocity.

12 *p. m.*—Southerly winds continued until after 7 p. m., when a steady no
in, which held on through the night. Weather partly fair and cloudy, the
ving with great velocity from a southerly point. The thermometer fell to 5
remaining near that point during the rest of the night. Barometer falling

May 24, 8 *a. m.*—Partly fair and cloudy weather during the past eight
light to fresh winds, the latter shifting to southeast at 4 a. m. Baro
steadily. The thermometer fluctuated between 49° and 50° until 6 a.
reached a minimum of 48°, and began to rise soon after.

day. Fair weather and gentle northwest wind until 6 p. m. Clear sky and light north wind thereafter.

May 26, 8 *a. m.*—Clear sky until after 6 a. m., when a few cirri and cirro-cumuli appeared in the western horizon, which are gradually increasing. The barometer has continued to rise, and the thermometer stood at 43° between midnight and 5 a. m., and began to rise rapidly after 6 a. m. Gentle to fresh north wind throughout.

4 *p. m.*—The barometer has been falling slowly since 8 a. m., with increasing cloudiness and hazy sky. The thermometer reached a maximum of 72° at 12 m., and remained high (71° to 70°) until 4 p. m. Gentle west and northwest winds throughout.

12 *p. m.*—Wind backed to the southeast at 7 p. m. Weather cloudy, and barometer falling.

May 27, 8 *a. m.*—Gentle southeast wind during the early morning, veering to the east at 6.30 a. m. Barometer falling. The thermometer fluctuated between 50° and 51° between midnight and 6 a. m., rising to 56° at 7 a. m. Weather cloudy.

4 *p. m.*—Partly fair and cloudy weather during the past eight hours, with light southerly winds. Thermometer, 74° at 1 p. m. Barometer falling steadily.

12 *p. m.*—A steady southeast wind set in at 8 p. m. Weather fair and barometer falling.

May 28, 8 *a. m.*—Gentle southeast wind continued during the night and veered to the westward at 7.30 a. m. Sky partly overcast with cirrus and stratus clouds moving from the west. Minimum temperature, 51°.5 at 5 a. m. Barometer falling.

4 *p. m.*—Cloudy weather and fresh westerly winds. Light rain-shower between 10.15 and 11.30 a. m. Barometer continues to fall. Maximum temperature, 70°.

12 *p. m.*—The barometer commenced to rise after 4 p. m., and a fresh northwest wind prevailed during the past eight hours. The weather cleared up between 9 and 11 p. m., but became overcast again toward midnight. Thermometer fell to 57°.

May 29, 8 *a. m.*—Light and variable westerly winds since midnight; sky covered with low stratus clouds. Barometer rising steadily. Minimum temperature, 51° at 5 a. m.

4 *p. m.*—The weather cleared up during the forenoon, and continues "fair." The barometer changed but little after 9 a. m. Maximum temperature, 68° at 2 p. m. Fresh "westerly" winds throughout. Sergeants Lloyd and Sackett relieved from duty as assistants by Privates Seely and Smith.

12 *p. m.*—The barometer began to fall after 5 p. m., and fell steadily up to midnight. Temperature declined to 51° at 9 p. m., remained at that point until 11 p. m., and rose to 54° at midnight. Fresh northerly to westerly winds until 8 p. m., and light easterly wind thereafter. Sky overcast after 9 p. m.

May 30, 8 *a. m.*—Barometer remained about stationary between midnight and 5 a. m., and has risen steadily since the latter hour. The thermometer fell throughout the night, reaching a minimum of 37° at 6 a. m. Wind very variable. A dense fog set in at 4 a. m., which was succeeded by sleet at 7.30 a. m.

4 *p. m.*—Sleet ended at 8.20 a. m., and the weather began to clear up. Fresh but variable northerly winds throughout. Maximum temperature, 50°. Barometer rising steadily.

12 *p. m.*—Partly fair and cloudy weather during past eight hours, with nearly clear sky at midnight. The barometer has continued to rise steadily. The thermometer fell to 32°.5 at midnight, which is the minimum of the day. Wind from all points of the compass, with a "gentle to fresh" velocity.

May 31, 8 *a. m.*—Cold and cloudy during the early morning, the thermometer falling to 29° at 4 a. m. Light and variable winds throughout. Weather clearing up after 5 a. m. Barometer still rising steadily.

12 *p. m.*—Clear and pleasant weather throughout the day, with fresh westerly winds during the afternoon, and easterly winds at night. Barometer high and steady. Maximum temperature, 56° at 3 p. m. The instruments have remained in excellent condition throughout the month of May, and all observations were made at the proper hours.

Journal for the month of June.

June 1, 1873.—Commenced with clear sky and gentle easterly winds. Barometer high and steady. Thermometer fluctuating between 39° and 40° until after 5 a. m. During the forenoon the sky became gradually overcast with cirri moving from the northwest, and the barometer began to fall. Wind changed to the northwest at 8 a. m., increasing to fresh and brisk. At 1 p. m. the sky was completely overcast with cirro-stratus clouds and the weather assumed a threatening appearance, but cleared up partly toward evening, and the wind diminished in force. Maximum temperature, 66°. Barometer rising slightly toward midnight. Auroral display from 10.30 to 11.30 p. m., consisting of several streamers of a uniform bluish color, apparently radiating from a common center below the northern horizon and extending half way to the zenith. The telegraph instrument was constantly at work during the display.

June 2.—Day opened with fair weather and light northerly wind. Barometer rising

Digitized by Google

Temperature falling from 54° at midnight to 37° at 5 a. m. Wind change and northwest between 9 and 10 a. m., increasing to fresh and brisk. Pa clear weather during the afternoon; lower atmosphere, smoky. Baromet tionary. Maximum temperature, 58° at 3 p. m. Variable light airs and the night, weather fair, sky partly covered with fine cirri moving very slo north, and giving rise to a faint halo at 9 p. m. Temperature falling to 4 and remaining about constant after that hour.

June 3.—Very hazy sky throughout the day. Upper clouds a continuous cirro-stratus, subsiding into stratus toward midnight. A well-defined, brig halo was visible at 1 p. m., forming one complete circle around the sun. western half of the halo was still visible, and did not entirely disappea 5 p. m. Barometer rising until 7 a. m., and falling steadily thereafte ature very low in the morning; minimum, 37°, rising to 59° during the af remaining steady at 44° during the night. Gentle northeast wind betwe and 8 a. m., followed by fresh westerly winds until 6 p. m., when a calm light south wind set in at 9 p. m.

June 4.—Commenced with threatening weather, and light southerly wi ter falling steadily. Thermometer steady. Light rain commenced at 2. continued until 10.30 a. m. The wind changed to the northeast at 8 a clouds descended lower down the mountains. Weather cleared up somewh ceased and the temperature rose rapidly, reaching a maximum of 66°. falling quite rapidly during the afternoon. Wind light and variable w calms. Rain recommenced at 6 p. m., and continued throughout the nigh works so badly that the signals could not be regularly acknowledged and 2.

June 5.—Rain ended at 5.20 a. m., but the weather continued cloudy and until evening, the clouds being very low during the forenoon, enveloping tains. Wind light and variable, from all points of the compass. Thunde heavy rain between 3.10 p. m. and 3.45 p. m. Barometer rising slowly, comparatively high during the afternoon, (64°–66°,) but falling to 47° at

June 6.—Day opened cold and cloudy. Thermometer 44° to 46°. Wind light. Barometer rising slowly during the forenoon. Light rain-showers noon, with some lightning. Variable westerly to northerly winds, w calms after 9 a. m. Barometer nearly stationary during the afternoon toward night. Maximum temperature, 65°. Quite a heavy rain-show rapidly from the westward, reaching the base at 1.15 p. m., and ascen Washington. The observers on stations 1 and 2 report "heavy hail" at t

June 7.—Commenced "cold and cloudy," with light easterly winds and changed westerly at 7 a. m., and continued from that direction with ge velocity until 8 p. m., when it backed to the east. Barometer rising The thermometer stood lowest at 3 a. m., (44°,) reached a maximum of 56 and fell to 48° at 8 p. m., remaining steady during rest of night. Clou during the forenoon. Numerous rain-showers during the afternoon and ceased at 11 p. m.

June 8.—Weather continued cloudy during the night, with fresh eas Thermometer steady at 48°. Barometer rising. Toward morning the clou break up, and the wind shifted to the westward, being very variable, but continued to move from the east and northeast. Barometer rising until n maining about stationary thereafter. Thermometer steady at 62° during th at 8 p. m. the last remnant of cloud had disappeared, and the sky was pe during the rest of the night. A gentle east wind prevailed during the nig

June 9.—Day opened clear and cool, with gentle easterly wind. Light break. Barometer steady. Weather continued clear until noon, when the partly overcast with cumulus clouds, which disappeared again at 6 p. m., lea sky. Temperature high during the afternoon. Variable northerly winds du and night. Barometer falling steadily after 6 a. m.

June 10.—Fair weather, with light and fresh northerly to westerly win out the day; sky "hazy." Barometer falling steadily. Thermometer midnight to 6 a. m., and rising rapidly thereafter, exhibiting a maximum p. m.; at 9 p. m. the wind changed to the south, and the temperature, wh clined rapidly between 7 and 8 p. m., rose 3°, and remained steady at 62° rest of the night. The sky clouded over with stratus clouds toward midn

June 11.—Day opened with threatening weather, and light southerly winds. Barometer falling. Temperature high and steady. Rain comme a. m., and continued until 7.40 a. m. The wind changed to the northwest fore the rain ceased, and the barometer began to rise after 8 a. m. Clou with fresh northwest wind and rising barometer, during the remainder of

June 12.—Partly fair and cloudy weather during the day, with variable and calms. Temperature low. Barometer rising throughout. At 9 p. m. were to be seen, and the weather continued clear up to midnight.

June 13.—Day opened fair and cold. Thermometer stationary at 39°.

Digitized by Google

high and steady. The light north wind which prevailed at midnight died off at 12.15 a. m., and a "dead calm" continued until 4.15 a. m., when a light easterly wind set in, which changed to the westward toward noon, the barometer falling slightly during the forenoon, and temperature increasing rapidly. Partly fair and clear weather during the afternoon and night, with fresh westerly wind, the latter backing to southerly at 7 p. m.

June 14.—Partly fair and clear weather and slowly falling barometer throughout. Variable light and fresh winds, chiefly westerly until 7 p. m., when a calm ensued, which was followed by light airs from the northward at 11 p. m. Sky partly covered with cirri moving from the northwest. The thermometer fell from 48° at 1 a. m. to 43° at 4 a. m., reached a maximum of 64° at 1 p. m., and declined rapidly after sundown, reading 43° at midnight. The 5 a. m. observation was lost by Assistant Observer J. H. Smith, who fell asleep before the time of taking the observation.

June 15.—Partly fair and cloudy weather, with gentle northerly to westerly winds. Barometer falling.

June 16.—Day opened "cloudy," with light airs from the north, and calms. Barometer steady. The barometer rose 3° from midnight to 1 a. m., and remained stationary at 57° until 5 a. m. Weather cleared up partly after 6 a. m., and a heavy "haze" prevailed during the fore and afternoon. Temperature very high, ranging from 72° to 75°, a fresh northwest wind prevailing at the time. The barometer remained steady until after 2 p. m., when it began to fall. At 9 p. m. silent lightning was observed in the northwest horizon, followed by quite a severe thunder-storm. Rain commenced at 10.25 p. m., and continued up to midnight.

June 17.—Rain ceased at 1.15 a. m., but the weather continued threatening during the morning, with fresh northwest wind. Barometer fell considerably between midnight and 2 a. m., and began to rise at 3 a. m. Thermometer steady, changing only 2° during the night. At 9 a. m. the weather began to clear up, and by 3 p. m. the sky was perfectly clear. Rising barometer and fresh westerly to northerly winds throughout. The temperature increased very slightly during the afternoon, and fell off rapidly after sunset, reading 43° at midnight.

June 18.—Day commenced clear and cold, with a gentle breeze from the north. Barometer rising slowly. During the forenoon the sky became gradually overcast with "cirri," moving from the northwest, and the barometer began to fall. Fresh westerly winds during the day, veering more southerly at 7 p. m. Barometer still falling at night, and the weather becoming threatening.

June 19.—Light rain between 2.15 a. m. and 4.15 a. m., the barometer falling until 3 a. m. and rising slowly thereafter. Cloudy and very hazy weather during the forenoon, with rapidly-rising temperature and fresh northwest wind. Rain recommenced at 2.25 p. m. and continued until 3.30 p. m.; the barometer rose rapidly between 2 and 3 p. m., but fell steadily after 3 p. m.

The weather cleared up after rain ceased, and the wind changed to the northeast, being very variable after 6 p. m. The thermometer, which at noon read 74°, fell to 64° at 3 p. m., rose to 70° at 6 p. m., and fluctuated between 66° and 70° during the remainder of the night.

June 20.—The barometer fluctuated greatly between midnight and 4 a. m., remained nearly stationary between 5 a. m. and 3 p. m., and rose steadily during the remainder of the day. Heavy rain between 2.50 and 3.30 a. m., the temperature being exceptionally high until after the commencement of rain. Fresh westerly winds prevailed at midnight, easterly at 4 a. m., and dying off at 7 a. m., being followed by a fresh northwest wind, which increased to a brisk velocity toward noon, and moderated toward night. Generally fair weather after 5 a. m. Sky partly covered with cumulus and stratus clouds, moving with great velocity from the northwest. The temperature declined rapidly after 7 p. m., reading 48° at midnight. Aurora appeared at 11.05 p. m. in the form of a band of light, extending in a northwest and southeast direction, from a point about 10° above the northwest horizon to some 5° past the zenith, the thickest part near the horizon. Brilliant on first appearance, but rapidly faded away from the zenith downward, and disappeared at 11.16 p. m. In general appearance it resembled the tail of a comet.

June 21.—Day opened cold and fair; calm until 4 a. m., when a light northwest wind set in, which continued throughout, increasing to very fresh during the forenoon, and diminishing in force at night. Barometer fluctuating until noon, and rising steadily thereafter. The sky became overcast at 10 a. m., and a heavy shower of hail, followed by rain, fell between 12.20 p. m. and 2.30 p. m. Cold and cloudy weather during the afternoon and evening, the clouds began to break up after 9 p. m., and the weather promised fair up to midnight. The temperature fluctuated considerably during the twenty-four hours, being 45° at 1 a. m., 43° at 6 a. m., 57° at 12 m., 47° at 1 p. m., 51° at 4 p. m., and 39° at midnight. The cable worked so poorly after 8 a. m. that the signals could not be properly acknowledged.

June 22.—Day opened with fair weather and light north wind. Temperature 36° to 38°. Sky clouding up after 7 a. m., and weather continues cold and cloudy throughout the day, with light and variable winds. Toward night a steady northeast wind set in,

Digitized by Google

and the weather cleared up completely by 9 p. m. Barometer rising steadily throughout.

June 23.—Clear weather, with gentle north to northeast wind from midnight to 8 a. m.; thermometer steady at 40° during the early morning. At 9 a. m. the wind changed to west, and the sky commenced clouding up with cumulus and stratus clouds, moving from the southeast. Cloudy weather with gentle westerly wind during the afternoon. Thermometer, 60° to 68°. At 6 p. m. the wind hauled southerly, and the clouds began to break up. No clouds visible after 9 p. m. The barometer rose steadily until noon and remained about stationary thereafter.

June 24.—Day opened clear and pleasant with gentle southeasterly wind. During the forenoon the weather became cloudy, and wind changed to north and west; clearing up toward evening, wind backing to southeast. Clear sky after 9 p. m. Barometer rising throughout. Temperature high.

June 25.—Partly fair and clear weather, with very high barometer and high temperature. Wind variable from all points of the compass, but clouds moving steadily from eastward. Barometer steady.

June 26.—Continued fair and warm weather. Sky partly covered with cirri and haze. Barometer falling steadily after 10 a. m. Light southeast wind during the early morning, light to fresh westerly winds during the day, and gentle northerly winds at night. Maximum temperature, 78°. At 10.56 p. m. a brilliant aurora made its appearance in the form of five distinct parallel bands of light, extending from the northwest horizon to some 10° past the zenith. These bands shot up in waves, alternately approaching and receding, and gradually lengthening until they reached the southeast horizon. At 11.08 it began to fade away until almost invisible, but at 11.12 suddenly increased in brilliancy, covering the sky from northwest to east 15° north with waves of light extending past the zenith. This continued until 11.25; from that time the aurora slowly faded away, until it disappeared at 11.55 p. m.

NOTE.—During the presence of the aurora, particularly during the time of its greatest brilliancy, the telegraph-wire was strongly charged with electricity, the instrument working the same as during the thunder-storm.

June 27.—Day opened clear and pleasant, with gentle northeast wind. At 5 a. m. the sky became partly covered with cirri, and the lower atmosphere grew hazy; wind shifted to west at 10 a. m., the temperature increasing rapidly, and weather clearing up again until evening. Partly fair and cloudy weather during night. The barometer fell uninterruptedly throughout.

June 28.—Day opened warm and cloudy, with light easterly winds. Barometer falling. Light rain commenced at 6 a. m. and continued until 10.40 a. m., when the barometer began to rise and the wind shifted to the westward. Cloudy weather during the afternoon, with high temperature and slowly-rising barometer. Clearing up toward evening—clear sky after 10 p. m. About 10.30 a. m. a frightful accident occurred to Private William Seely, one of the assistants attached to this station. He was sliding down the track from the Waumback House (station No. 3) on a board, when he was run into by Sergt. D. H. Sackett, who, being unable to control his board, in consequence of the track being very slippery from the effects of a prevailing rain, struck Seely's board with tremendous force. Seely was thrown forward on his head, and, striking on the cross-ties, was fearfully mangled. Sergeant Sackett instantly summoned assistance, and through the kindness of Mr. Walter Aiken a train was as quickly as possible run to the place where the accident occurred, and Private Seely was conveyed to the railway-depot. It was not until 10 p. m. that a surgeon could be obtained, the wire to Littleton being down. On being apprised of this fact Sergeant Sackett rode to Littleton and procured the services of Dr. Bugby. On examination Seely's injuries were found to consist of a fractured skull, his right leg broken above the knee, his left ear torn off, and in addition the muscles of his chest and his vertebral column severely wrenched. As he was apparently suffering great pain, and required constant watching, by the advice of Dr. Bugby I consented to his removal to Littleton, where he could have proper nursing and medical attendance. Private Seely was unconscious up to the time of his removal, which took place on the morning of the 29th. Thanks are due to Mr. W. Aiken and employés of the Mount Washington Railroad, also to Mr. Edward Cox and ladies, for kind and efficient help rendered the suffering man.

June 29.—Partly fair and cloudy weather, with very high temperature and light variable winds. Barometer fluctuating and rising slowly. The minute observations between 9 and 10 p. m. had to be dispensed with, as the office was being fitted up by Mr. Gates, of the Western Union Telegraph Company, and the barometer had to be taken down.

June 30.—Warm and cloudy weather throughout. Barometer rising slowly. Gentle southerly winds during the day, increasing to fresh at night. The instruments remained in good condition during the month, with the exception of three cups of the Daniells battery, which became leaky.

ROBERT SEYBOTH,
Observer-Sergeant, Signal-Service, United States Army.
